

Explorer X7-Xtreme S1 - Add a Core i7 laptop

Along with Intel's Core i7 920 processor, it also supports 6.144 MB memory, 64-bit Windows 7 Home Premium operating system ...

On 11/11, US computer maker CyberPower introduced laptop users to the Explorer X7-Xtreme S1 game with a 17 inch screen with 1920 x 1200 pixel resolution. In addition, it is equipped with Nvidia's GeForce GTX 280M GPU single graphics processor, Intel X58 + ICH-10R board, 3.1 megapixel webcam, 7-in-1 card reader, eSATA and HDMI ports, Bluetooth, and 4 USB ports.

Along with Intel's Core i7 920 processor, it also supports 6.144 MB memory, 64-bit Windows 7 Home Premium operating system .

It has a hard-to-use keyboard, which designs frames from laptop models two years ago with low-pressure plastic, and no Blu-ray player. The Explorer X7-Xtreme S1 is relatively heavy with a weight of up to 5 kg.

According to Techradar, the Explorer X7-Xtreme S1 runs quite a number of applications at the same time, there is no lag. Playing games and watching movies is relatively smooth. However, its selling price is a bit expensive at \$ 2,335.
