

# ExpressVPN Review: The best overall VPN today

ExpressVPN is the best VPN provider in the class. This VPN offers the highest level of security and a large number of servers, spread over 94 countries.

Despite its significantly higher cost than its competitors, ExpressVPN remains the # 1 choice for businesses that need a top-quality VPN solution.

Investing in ExpressVPN means you get reliable and secure Internet access, good data security, and extensive customization options.

Let's review ExpressVPN in detail through the following article!

10. **Data usage** : Unlimited
11. **Bandwidth usage** : Unlimited
12. **Maximum number of devices connected simultaneously** : 5
13. **Customer support** : 24/7 chat and email
14. **Privacy policy** : No logging

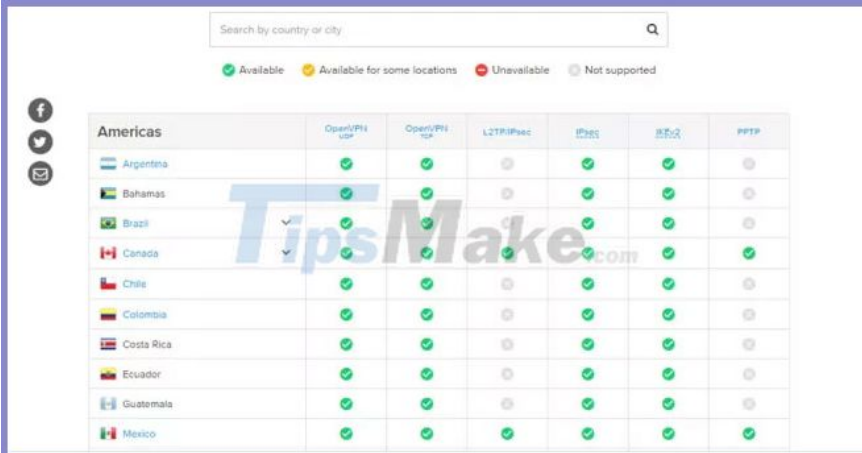

## Packages and prices

Honestly, ExpressVPN is one of the most expensive VPNs out there. Many plans are available, with the cheapest one being a yearly subscription, costing \$ 8.32 / month. Meanwhile, a 6-month subscription costs \$ 9.99 / month, while a monthly subscription costs \$ 12.95 / month.

Fortunately, all registrations allow users to access every ExpressVPN server. One ExpressVPN account can support up to 5 devices. If you connect your Internet router, you can provide even more private and secure Internet access.

## Features of ExpressVPN

With over 160 locations in 94 countries, ExpressVPN offers more options than most other VPN services. With servers available on every continent except Antarctica, it's easy to find one that fits your business needs.

The screenshot shows the ExpressVPN server selection interface. At the top, there is a search bar labeled "Search by country or city" and a legend with four status indicators: a green circle for "Available", a yellow circle for "Available for some locations", a red circle for "Unavailable", and a grey circle for "Not supported". Below the legend is a table titled "Americas" with columns for "OpenVPN UDP", "OpenVPN TCP", "L2TP/IPsec", "IPsec", "IKEv2", and "PPTP". The table lists 11 countries: Argentina, Bahamas, Brazil, Canada, Chile, Colombia, Costa Rica, Ecuador, Guatemala, and Mexico. Each row contains colored circles indicating the availability of each protocol for that country. A large "TipsMake.com" watermark is overlaid on the table.

Americas	OpenVPN UDP	OpenVPN TCP	L2TP/IPsec	IPsec	IKEv2	PPTP
Argentina	Available	Available	Unavailable	Available	Available	Not supported
Bahamas	Available	Available	Unavailable	Available	Available	Not supported
Brazil	Available	Available	Unavailable	Available	Available	Not supported
Canada	Available	Available	Unavailable	Available	Available	Not supported
Chile	Available	Available	Unavailable	Available	Available	Not supported
Colombia	Available	Available	Unavailable	Available	Available	Not supported
Costa Rica	Available	Available	Unavailable	Available	Available	Not supported
Ecuador	Available	Available	Unavailable	Available	Available	Not supported
Guatemala	Available	Available	Unavailable	Available	Available	Not supported
Mexico	Available	Available	Available	Available	Available	Available

With over 160 locations in 94 countries, ExpressVPN offers more options than most other VPN services. ExpressVPN also ensures that most of its locations have multiple VPN protocols available. Whether it is OpenVPN UDP / TCP, IPsec or IKEv2, ExpressVPN users can choose the VPN protocol that best suits their individual needs. Users can also ask the ExpressVPN app to automatically choose the most appropriate VPN protocol.

When using ExpressVPN, one of my favorite features is the Split-tunneling tool. Because using a VPN will certainly slow down the Internet speed, the user may not want all applications to access the VPN at the same time. The Split-tunneling tool allows users to choose which apps or websites will use the VPN, ensuring general web browsing or streaming media continues at a faster rate. This feature is not available to most of ExpressVPN's competitors.

ExpressVPN also provides best-in-class security. Using both AES 256-bit encryption and a 4096-bit authentication key means that virtually no one can keep track of your connection history and Internet usage.

Another advantage of ExpressVPN is its use of TrustedServer. This service allows ExpressVPN's servers to run on RAM only and means that no identifying data is logged on its servers, not even encrypted. Without a doubt, ExpressVPN is one of the most secure VPN services available on the market.

## Interface and ease of use

The ExpressVPN app is easy to use and is available on most devices, including game consoles and smart TVs. This makes this service different from competitors. As mentioned before, connecting ExpressVPN to the Internet

router can also provide seamless VPN access to an entire office or meeting room space.

When using the application, changing the server is very intuitive, and the application will always let you know when you are connected or lost a VPN connection. If you suddenly lose connection, the kill switch function ensures your Internet connection is blocked until a secure connection is re-established.

The search function makes finding a server easy, and the app remembers which server you connect most frequently (this recorded data doesn't leave your phone).

The ExpressVPN app is easy to use and is available on most devices

## Support

Although often overlooked by developers and users, having a good support system is essential for any VPN. Thankfully, ExpressVPN provides both quality posts, highlighting many issues customers may encounter, as well as an active and helpful 24/7 live chat feature.

ExpressVPN's articles outlining how to do exactly what you want - get straight to the point and don't get messed up. However, if the issue persists, ExpressVPN's live chat support is a reliable source that should be fully utilized. Responses usually come within minutes from friendly and knowledgeable counselors.

## Conclude

ExpressVPN is a # 1 VPN option: Top security, a bunch of best server options in layering, and Split-tunnelling. If you need a complete VPN solution, ExpressVPN is a great option (the high cost of this option is absolutely worth it).

However, if cost is an issue, then there are plenty of other quality VPN solutions available that will suit the needs of small and medium businesses.

## Advantages

1. Can be used on multiple devices
2. There are advanced features like Split tunnelling
3. VPN is available in more than 94 countries

4. 30-day risk-free money-back guarantee

## Defect

1. The cost is more expensive than most of the competition
