Illustrative images are always an important component of any document, especially in reports and presentations. Sometimes you really want to get images from another document to illustrate your article. But the method of saving each image manually becomes boring if the document contains a large number of images or you have to deal with many documents. RL Vision's free lightweight **Office Image Extraction Wizard** allows you to automatically extract a series of photos from a variety of Microsoft Office and Open Office documents in a single process.

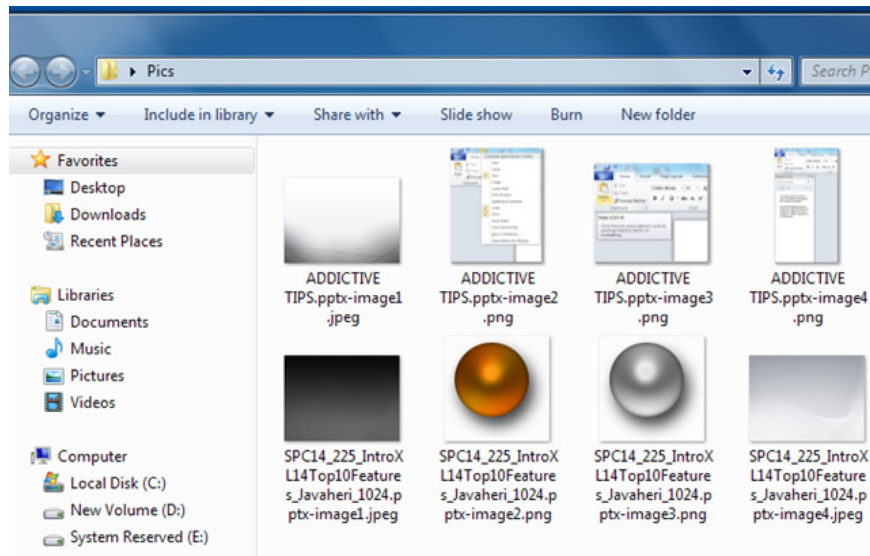

When you open the application, click **Next** on the welcome screen to start working. The **Input & Output** window allows you to select the document you want to take the image and set the address to save the image after extracting.

If you want to process multiple documents at the same time, check the **Batch Mode** box below the **Input & Output** screen. You use the two **Add Files** and **Remove** buttons to add the documents you want to process. The folder to save the document is set in the **Output folder** . If you want the image of each document to be exported in a separate folder, check the box *Create a folder for each document* . Next, click **Next** and then click **Start** and wait for the application to process the document.

When the **Finished** screen ! appears meaning the process is complete, click the **Click here to open destination folder link .** to open the folder to save the image:
