## Simple way to fill in blank cells with 0 in Excel

**Step 1:** First we need to select all of those cells by highlighting the entire spreadsheet. Then you select the **Home** tab on the Ribbon. Next, select the **Find & Select** magnifying glass icon . The scroll bar appears, select **Go To Special**. Or you can also use the keyboard shortcut **Ctrl + G** to quickly open the **Go To Special** window .

**Step 2:** At this point, the **Go To** window appears. Click on the **Special** section .

**Step 3:** The **Go To Special** window appears, select the **Blanks** section. Then click **OK** to complete

**Step 4:** At this point, all blank cells in the spreadsheet have been selected. To fill the value 0 into these cells, you just need to press **F2** or click on the formula bar and enter the value 0. Then press **Ctrl + Enter** to copy all selected blank cells.

The result we get is that all blank cells have been filled with 0. The spreadsheet will no longer be as empty as before.
