How to take screenshot on Asus Win 10 computer

As a product running the most popular Microsoft Windows operating system in the world, the way to take screenshots on Asus computers is generally similar to other ways to take screenshots on laptops. However, each computer manufacturer has its own exclusive tools for its customers.

Take screenshot of Asus computer using PrtScr key

PrtScr is a key that is available on every laptop. It is always used as a 'superhero' button so we can quickly take screenshots without having to use any other software.

Step 1: First, press Alt + Print Screen (can be abbreviated as PrtScr on some laptop models) or Windows + Print Screen at the same time.

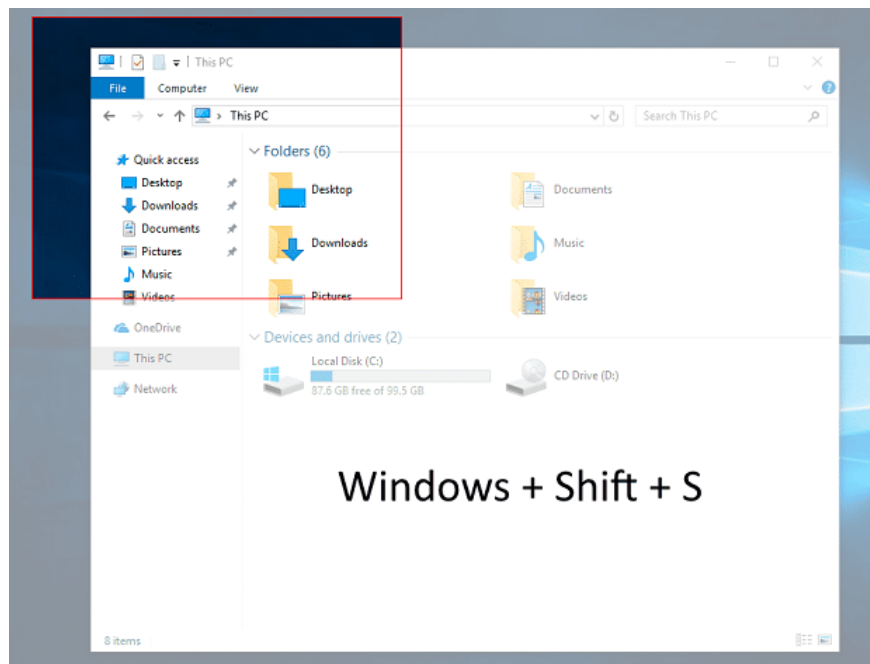

Asus computer screenshot key combination

Step 2: After pressing the key, the screen will flash once to let the user know that the screen has been captured. For Windows 10, the captured image will be automatically saved to the system. And you can completely edit this image (cut, paste, add text, .) as with any normal image. Normally, the system will automatically save it to the Pictures folder of the device, unless you have reinstalled it.

Some other ways to take screenshots on Asus laptops

Similar to the above method, you can also use some other shortcuts to take screenshots on Asus computers such as:

1. Windows + Volume Down
2. Windows + Shift + S
3. PrtScr

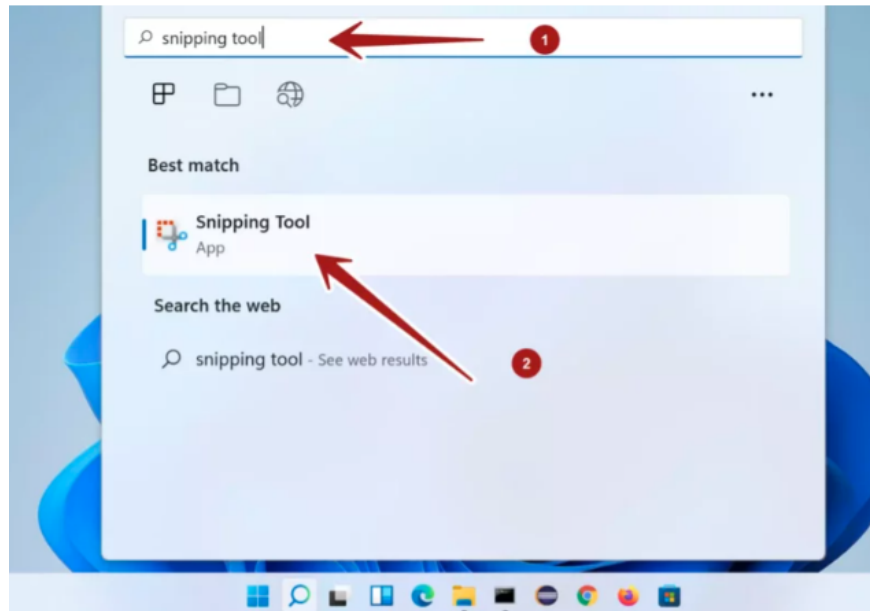

Photos taken will be saved here.

Note: Not all Asus computers have the default screenshot function integrated with all shortcut keys. So to know if your computer supports the function or not, you just need to try all of them once.

Use third party application to take screenshot on Asus computer

Why do we still waste time downloading screen capture software to our devices when pressing 1 or 2 shortcut keys already available by default on our devices is very simple. Because these applications will provide you with more interesting screen capture options than the available methods.

For example, when using the software, you can capture the entire web page you are viewing, select a specific area to capture, or edit the image directly after capturing. For those who need to take screenshots regularly or in a special way such as graphic designers, content creators, image makers, etc., these software are worth downloading.

There are currently many third-party applications that specialize in serving the needs of taking free screenshots that you can refer to, including: Snagit, Picpick, FireShot, Screenpresso, FastStone, ScreenHunter Pro, Lightshot,.

You can see that the ways to take screenshots on Asus computers are extremely simple, you can do it without any difficulty. There are many different ways for you to choose how to take screenshots on Asus computers depending on your habits, preferences, and the operating system and applications available on the device.
