

Factors that help Galaxy M32 score: The best screen in the segment, huge 6000mAh battery...

Galaxy M32 is one of the latest mid-range M series smartphones introduced by Samsung. Although it is only an M-series smartphone, compared to a few other models in Samsung's A series, the Galaxy M32 proves to be quite superior in a few factors.

Considering the needs of young users in this price segment, we evaluate the Galaxy M32 as both a fashionable device and a product line that meets the entertainment needs of the majority of users. young.

M series smartphone but has a stylish design

So far, Samsung's M-series smartphones have all had outstanding advantages from large battery life. This has led to an inevitable consequence that the body becomes quite thick and clumsy.

For example, the Galaxy M51 series launched last year, this machine has a battery capacity of up to 7000mAh and has a glossy plastic back that is quite easy to scratch. We had the opportunity to experience the M51 and this machine is indeed quite heavy in the hand, especially for female users.

However, this year, the Galaxy M32 has changed in a more positive direction. The battery of the device is still large (6000mAh) but the thickness is reduced to only about 8.4mm and weighs 180g, giving a more comfortable grip, suitable for more users.

The device is only 8.5mm thin, weighs 80 grams, significantly thinner and lighter than other M series smartphones such as Galaxy M51, M62.

Another factor that contributes to the highlight of the Galaxy M32 comes from the back with a unique vertical pattern. This detail both adorns the back of the device, while helping to feel firmly in the hand while creating a more fashionable and youthful look than many smartphones in the same segment.

In general, Galaxy M32 is not exactly a smartphone with the most optimal design or the most fashionable in the segment, but compared to most M series smartphones, Galaxy M32 brings a more novel change to users.

Top rated element: Stunning display!

In the process of using Galaxy M32, we felt quite surprised when in the price segment of just over 6 million, Samsung equipped the M32 with such a beautiful and quality screen. Even a few recently launched A-series models, the Galaxy A22 series, do not have a screen of the same quality as the M32.

In terms of parameters, the Galaxy M32 is equipped with a 6.4-inch screen, using a Super AMOLED panel, Full HD + resolution and a 90Hz refresh rate. This screen is an Infinity-U "water drop" screen

Very few machines in the same segment are equipped with a beautiful screen like the Galaxy M32. Most smartphones in this price range have to sacrifice a few parameters, not the display panel, the resolution, or the large 90Hz refresh rate. As for the M32, this machine converges all the parameters: Super AMOLED beautiful display panel, Full HD + resolution is more than enough and 90Hz refresh rate.

For comparison, the newly launched Galaxy A22 series has the same price as the M32, even more expensive with the 5G version, Samsung only has a 90Hz AMOLED screen but HD + resolution for the LTE version, and the 5G version has a resolution. Full HD + 90Hz resolution but the display panel is very poor TFT

Galaxy M32 has a high brightness screen of up to 800 nits, completely meeting the entertainment needs, especially watching movies of the women's association. Experience watching movies on Netflix with Galaxy M32 is the best in its segment

How does the 6000mAh battery of the Galaxy M32 give the experience?

Although there is no huge 7000mAh battery like the Galaxy M51 or M62, the 6000mAh battery of the Galaxy M32 is completely enough to meet the needs of a day with heavy intensity, even up to the second day if the user limited use of heavy tasks (playing games, taking lots of photos or using 4G for a long time).

Galaxy M32 has a 6000mAh battery, more than enough to use for all needs

With a 6000mAh battery, even when you play games for up to 2 hours/day or even more, Galaxy M32 fully meets 5 to 6 hours of continuous on-screen time with one battery cycle.

If you care about the performance of the device, the Galaxy M32 is equipped with a MediaTek Helio G80 chip similar to the Galaxy A22 LTE, enough to use at HD graphics settings and High FPS with PUBG Mobile game.

Another plus point of the Galaxy M32 is the ability to support 25W fast charging, not 15W. For those who do not know, the 25W capacity is equal to the charging capacity of the Galaxy Z Fold3 or Galaxy S21 Ultra, Samsung's most advanced smartphones. However, Samsung does not include a 25W charger with the device, which users will have to buy separately if needed. Otherwise, the included 15W charger is still fully responsive.

The charger included with the Galaxy M32 only has a capacity of 15W. Users using this charger will take 2.5 hours to fully charge 100% of the device's battery, and with the 25W charger purchased separately, the charging time will be reduced to only about 1 hour 35 minutes to 1 hour 40 minutes.

Conclusion

In this segment, the Galaxy M32 outperforms all other competitors in terms of screen as well as battery life. It is really difficult to find a smartphone with a beautiful screen like the Galaxy M32. This has been verified by many users as well as reputable reviewers.

If you are looking for a smartphone with a reasonable price, a high-quality screen to meet the needs of watching movies, entertainment, especially with large battery life, the Galaxy M32 is an option not to be missed.
