

Falling into the river, the stork was re-eaten by the piranhas in the blink of an eye

The poor white heron, just because of a bit of carelessness, made me fall into the river, the habitat of ferocious piranhas, so they were taken care of in a flash.

Piranha, also known as tiger fish, swordfish, a small fish, is only about 15-26cm in size but extremely dangerous. With jagged teeth, extremely sharp and powerful biting force (3 times that of American crocodiles) and behavioral and hunting with herds, piranhas are the obsession of almost every animal in the Amazon region!

1. Piranhas, carnivorous fishes who easily bite off metal wires in a flash
2. This is the reason why fish lose their heads, filtering bones still jumping on the tray

Piranhas are very aggressive and very agitated, almost no animals can escape their formidable attack. In the blink of an eye, piranhas will clean up their victims. People used to drop a cow into the water and after more than 15 minutes, the tiger fish handled their "meal".

The poor white heron in the video below, just because of a bit of carelessness, made me fall into the river, the habitat of ferocious piranhas, so they were taken care of in a flash.
