

Family safes are good to buy the most today

Safes are effective items to protect family property. However, choosing which type of quality and safety is not everyone knows. Read through the following article for more information.

Your family has many valuable assets such as money, gold and silver, important documents should be equipped with a safe to prevent theft. The following article will introduce you to the safe, most secure **family safes** .

Experience choosing safes for families

Select the appropriate capacity

You should base on the amount of objects you want to put in the safe to choose the appropriate volume. According to experts in the field of safety for theft of safes, on average, one person can lift 70kg if done alone, and when combined with others, the average is 50kg / person. Therefore, you should choose to buy a larger safe deposit box.

For family **safe** , choose a volume greater than 30%. In Vietnam, the usual safes range from 40-50 liters.

In case of use for offices due to papers, seals and other important objects and increasing day by day. You need to choose a volume of more than 40%. I like to recommend it in this range of 80-100 liters. In addition, you should also choose a double-deck safe or a safe in the safe to use.

For banks, gold shops, families often store high-value items, choose really big safes, at least 160kg or more so that both thieves cannot carry.

Pay attention to the locking system

You should choose the type of latch that can be rotated when cut by machine. Priority for large latches from 28mm upwards and latches are deep into the body at least 30mm for maximum safety.

Engine

The factor is also quite important. Therefore, before buying, you should ask the staff to check and check the engine to make sure you choose the right product.

Lock type

Currently on the market there are many types of locks for safes such as number lock, fingerprint lock, key lock . You should choose engine lock code change, integrated key lock to increase safety.

Fire resistance

Fire protection is always a priority feature when using safes. Choose a tank with a temperature of 1000 degrees C or more in about 100 to 120 minutes. In case of a bad case, you can still protect your property.

Material and design

In addition to safety factors, materials and designs need to be taken into consideration to ensure aesthetics of your home space. Don't be afraid to spend money to buy safe, thick and durable safes. You should choose steel plates with thickness from 1.6 to 2.0 cups to protect your property more safely.

Family safes are good

Mechanical lock safe

Mechanical safe has a very high safety, especially sg and lagard keys of the US with almost absolute accuracy, so the detection of the number is almost impossible (currently there are no workers in Vietnam to be sure code).

In terms of durability, it is entirely possible to use metal disk gong so the lateral degree is 50 years. However, mechanical lock safes also have disadvantages such as difficult to handle when forgetting codes. In addition, the average opening operation takes 15 seconds and 30 seconds for code changes, longer than other types of safes.
