Japanese electronics maker Libretto W100, a new mobile device, doesn't look like a tablet or other laptop on the market.

According to PC Mag, the W100 has a design like a giant Nintendo DS handheld game. The device weighs 0.8 kg, has no keyboard or touchpad but only uses 3 hard keys.

W100 has a much higher configuration than tablets or netbooks using Windows 7 operating system, 1.2 GHz Pentium U5400, 2 GB DDR3 RAM, 62 GB SSD drive, a USB port and 1 slot Memory card slot and 3.5 mm jack.

The most unique feature of this laptop is the use of 2 7-inch screens with 1024 x 600 pixel resolution. The bottom screen can be converted into a touch keyboard.

Toshiba also has a 6-cell battery for the Libretto W100, promising 5 hours of continuous use. The product will be available in the market a few months later with a starting price of \$ 1,100.
