

File sharing between PC / Mobile and Mobile without software

Plover - a file transfer service via WiFi is a tool to help you share files from one computer to another, from mobile devices to computers, or transfer data from mobile to mobile without use cables or convertible software.

Plover - a file transfer service via WiFi is a tool to help you share files from one computer to another, from mobile devices to computers, or transfer data from mobile to mobile without use cables or convertible software. You only need to access those two devices on the same Internet and then file sharing.

How to share files between PC / Mobile and Mobile without software:

Step 1: From your phone and computer, access to Plover - Browser File Transfer. If the same Internet, surely two devices will "see" each other. Specifically in this example, the Android device will be named "giraffe", and the laptop is called "Mouse".

Step 3: At the web interface on the PC, you will see the message as shown below. Click Download to save the file to your computer.

When transferring files from PC to PC, PC to Android or iOS you do the same. The method is quite simple, so anyone can use the file sharing utility with this Wi-Fi network

Note: The maximum file size of this website is 50MB, suitable for those who need simple file transfer.
