

FilerFrog is a great extension for Windows Explorer

Windows Explorer is a file manager and the most used Windows application. How can you access your files without Windows Explorer?

Windows Explorer is a file manager and the most used Windows application. How can you access your files without Windows Explorer? If Windows Explorer is not very handy in some specific contexts, FilerFrog is born to make up for these utilities.

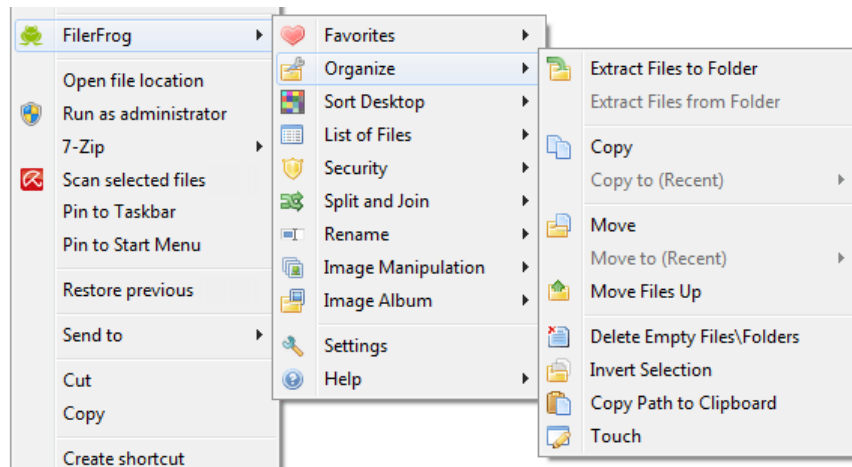

How does FilerFrog change Windows Explorer?

To speak correctly, FilerFrog is an extension integrated with Windows Explorer. It adds additional features to the Windows file manager, without changing or replacing Windows Explorer. In fact, FilerFrog is very compact and completely free. After installing the application and restarting your computer, you will see the FilerFrog menu in the menu when you right click, ie in the Windows Explorer context menu.

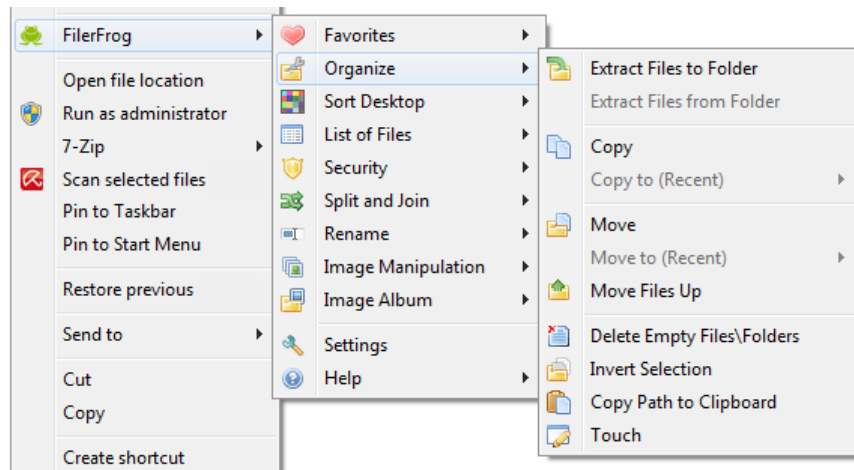

What does FilerFrog do?

Hide behind FilerFrog menus in context menu Windows Explorer is a powerful tool you've never been able to use when using Windows Explorer alone! Once you get the first look, when FilerFrog provides a lot of features after you choose the FilerFrog menu.

Organize feature> Extract Files To Folder

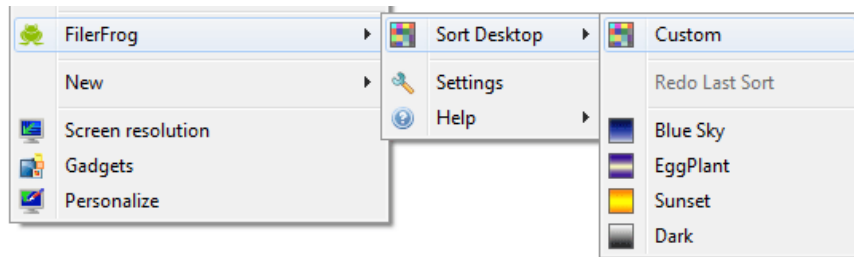

With this feature you can easily create a new folder and move selected files and folders to all in that newly created folder in one easy step. New folders will be created at the same level as the selected files or folders.

Organize feature> Copy / Move

Instead of copying and pasting files or dragging them from one folder to another (you always have to open two windows), you can now just copy or move them using FilerFrog because FilerFrog allows you to browse to the desired location right in that window.

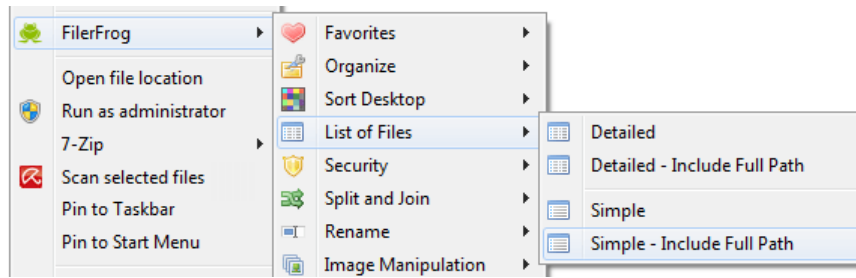

Sort Desktop feature

The name of this menu is a bit misleading. It really doesn't allow you to rearrange your desktop. Instead, it allows you to manage Desktop colors.

List Of Files feature

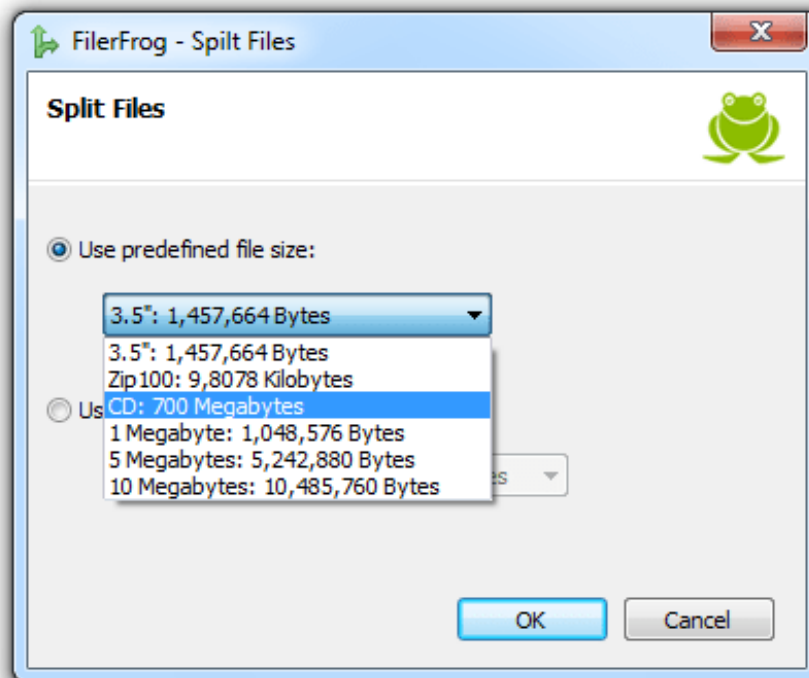

This feature you do not simply create a list of files in any folder, but you can create in many different forms: details (Detailed), a simple list of file names only (Simple) or a list that includes the full path (-Include Full Path).

Security feature

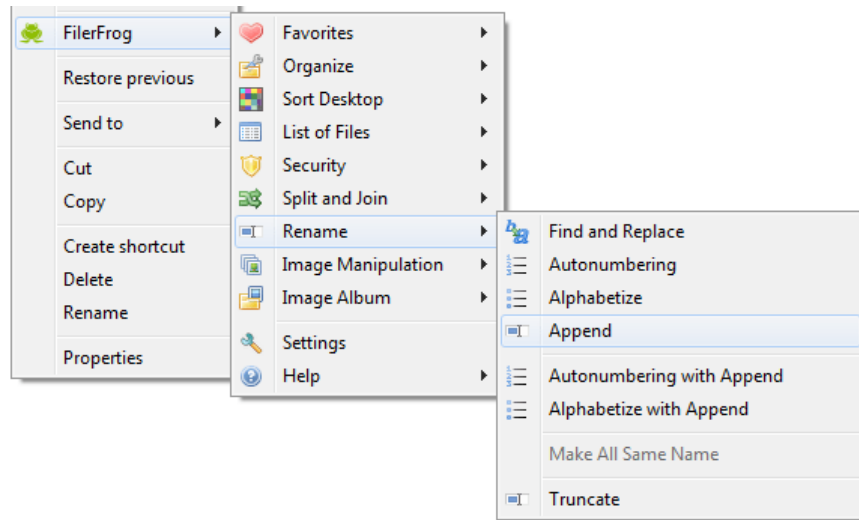

With FilerFrog you can encrypt files and protect them with this password, making your data more secure.

Split and Join feature

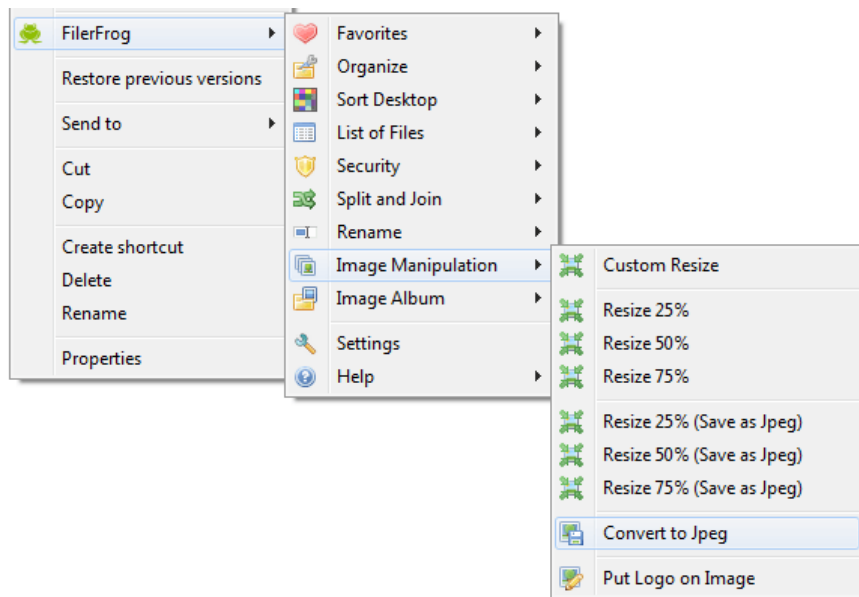

Ever need to split files to burn to multiple CDs or send via email? FilerFrog allows you to split and join files with standard sizes like: Zip100, CD, 1M, . or even you can decide the size yourself.

Rename feature

There are many different ways to rename supported by FilerFrog. For example, Find and Replace (Find and Replace menu) allows you to search for any content in the file name and then replace it with any name you choose. Using the Append feature, you can add any content to the start or end of the file name.

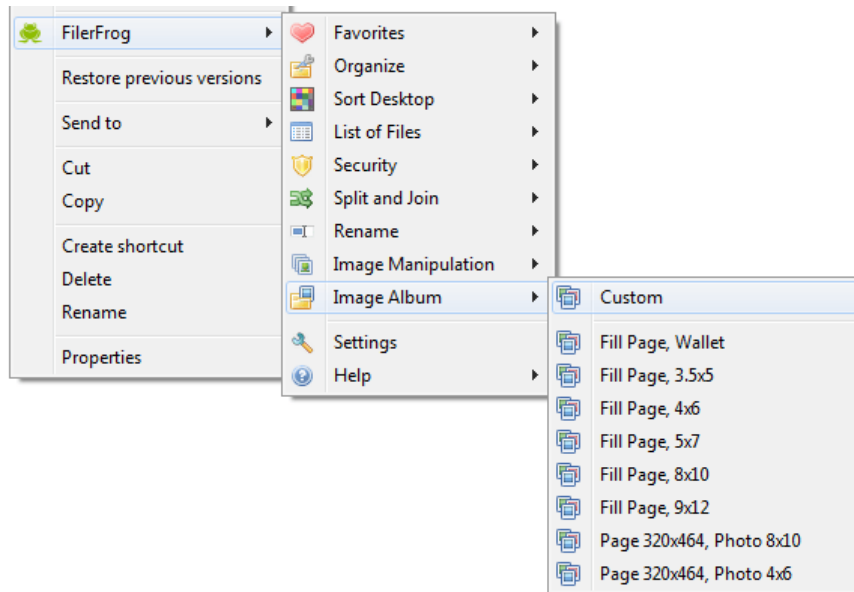

Image Manipulation feature

With this menu you can resize images, convert them into JPEGs, or even add your own logo to the picture (as a signature on the image).

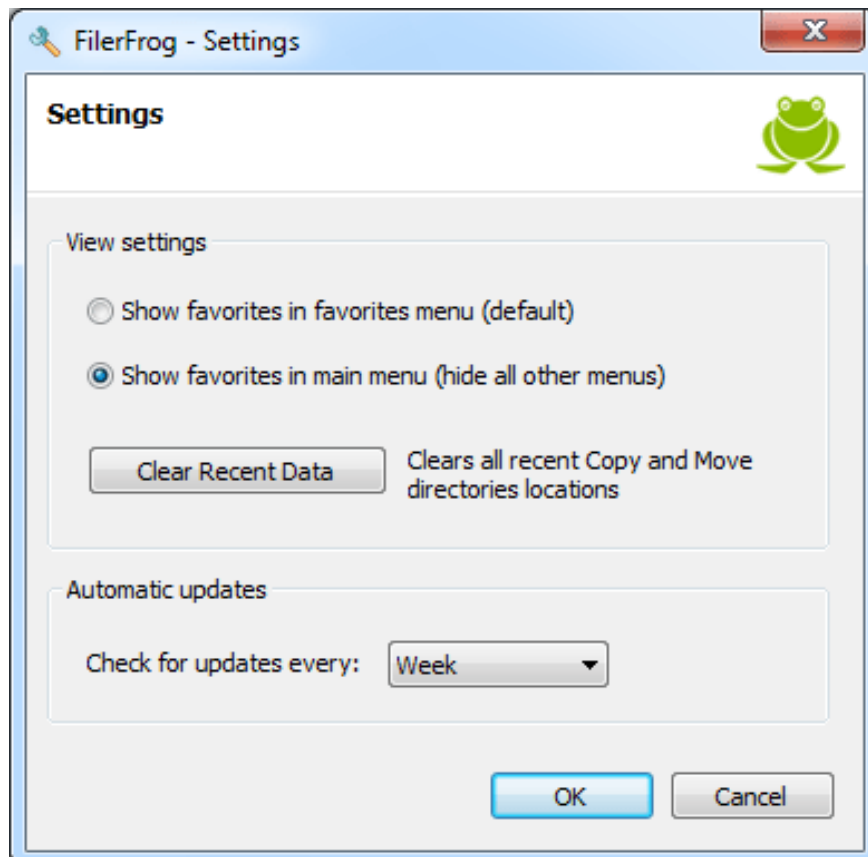

Image Album feature

With a very simple click, it offers great results. This menu helps you pack selected photos very quickly into a PDF document to share with friends and family.

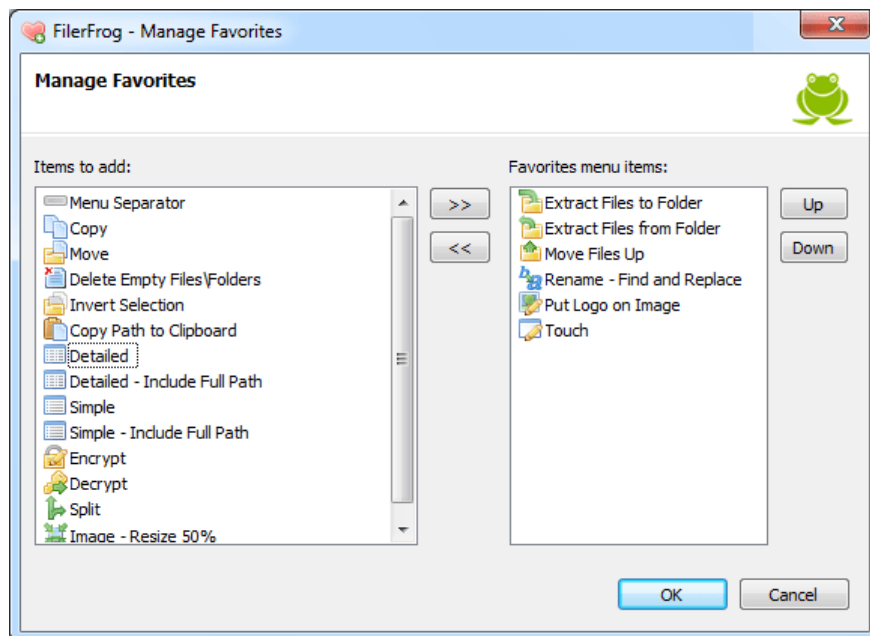

Customizations in FilerFrog

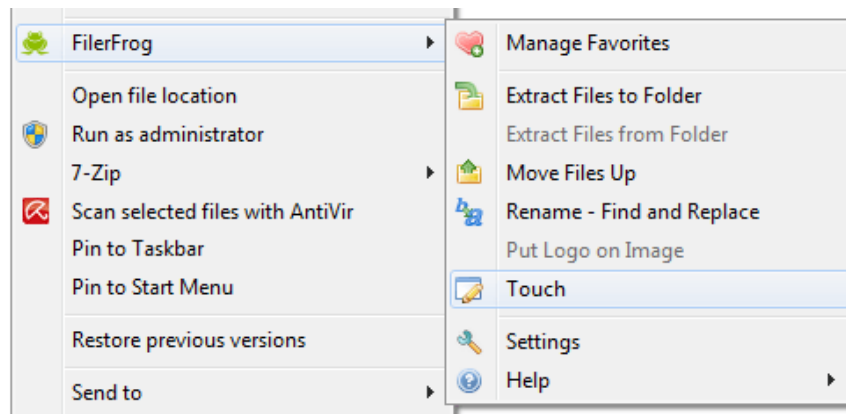

You have two options for displaying the menu of FilerFrog. The first way is to click the **Settings** menu in the FilerFrog menu and select *Show favorites in the main menu (hide all other menus)* to display the favorites list (Favorites) in the *main menu (hide all other menus)* . Option 2: Click the **Settings** menu in the FilerFrog menu and *Show favorites in favorites menu (default)* to display the favorites list in the main menu located in a submenu of the main menu.

You can customize your list of favorites. Simply click **Manage Favorites** and a window that allows you to drag the above items into the **Favorites** menu will open.

After selecting the menu the results may look like the following:

You can download **32 bit** version or **64 bit** version.

If you want more information, you can visit the FilerFrog **homepage** .
