

Filip GPS Locator Smart Watch - Smart watch for kids

Filip is a smart watch designed specifically for children. However, it is fully equipped with Wi-Fi connectivity, GPS navigation system and features comparable to a mobile phone.

Filip is a smart watch designed specifically for children. However, it is fully equipped with Wi-Fi connectivity, GPS navigation system and features comparable to a mobile phone.

According to Evado Filip Holding Ltd., **Filip** was created to help parents keep an eye on their children even when they are not there regularly.

This smart watch will allow parents to program for 5 phone numbers (for which children can send / receive messages from predetermined phone numbers), and in case of a real emergency The (or none of those 5 pre-set phone numbers catches or responds), your children can still press the emergency alert button, and **Filip** will activate its beacon, automatically Locate, record and contact local rescue workers.

It's unbelievable that all of those features are included in such a tiny watch, but the fact that this smart watch won't allow kids to download any application (for example, like games) is also a remarkable point when parents choose to buy for their children.
