

Filming, video screen with Bandicam software

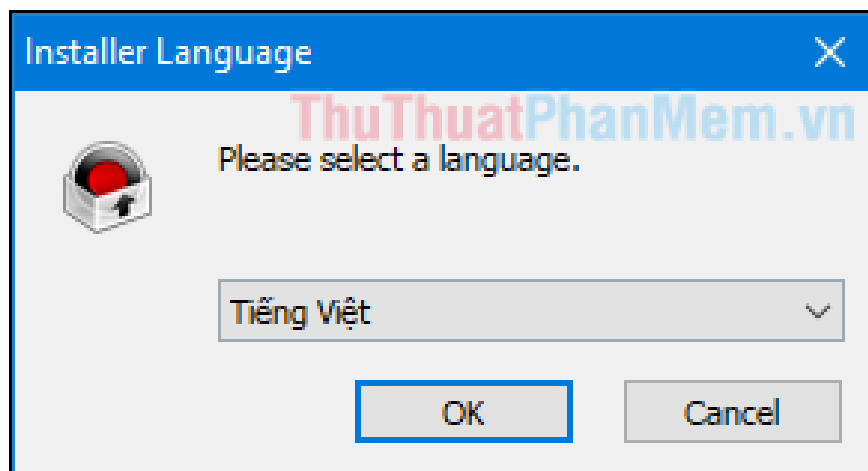

Filming, video screen with Bandicam software. To record screen video we have quite a lot of different software options such as Camstudio, VLC Player, OBS Studio ... etc ... and one of which can not fail to mention is BandiCam, this is a video recording software

Currently, there are many people who want to record video on computer screens with different purposes such as shooting video games, or making instructional videos, etc. And for recording video screens, we have many options. different software such as Camstudio, VLC Player, OBS Studio . etc . and one of which is impossible not to mention that is BandiCam, this is a very professional screen recording software and is used by many users. The following article of Thuthuatphanmem.vn will guide you step by step to film your computer screen with BandiCam software. Please follow along.

First of all, if your computer has not installed BandiCam software, you can download the software from the homepage using the link below:

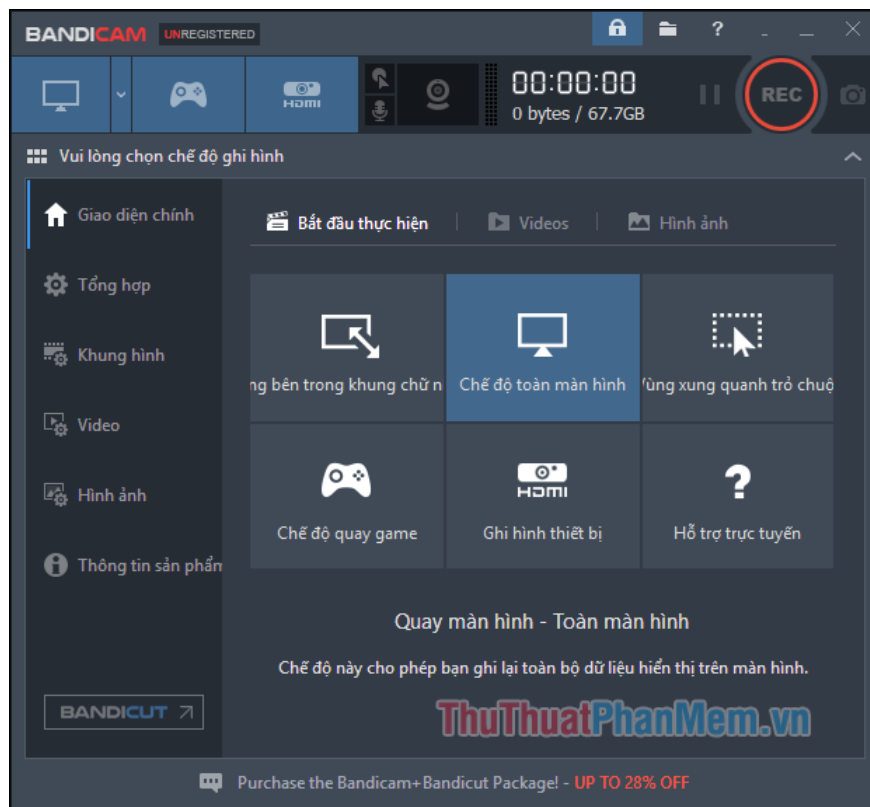

<https://www.bandicam.com/downloads/>

After downloading, double-clicking on the file to install, you can choose Vietnamese language for ease of use.

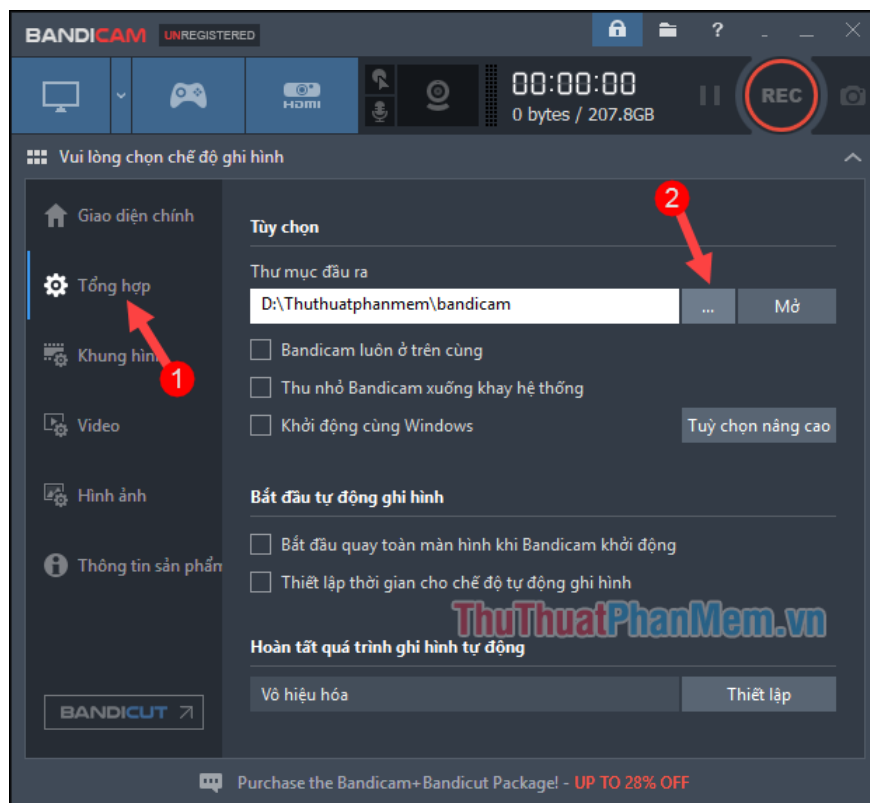

The next steps to install are quite simple, you can completely do it yourself. After installation, run the software and the following is the main interface of the application:

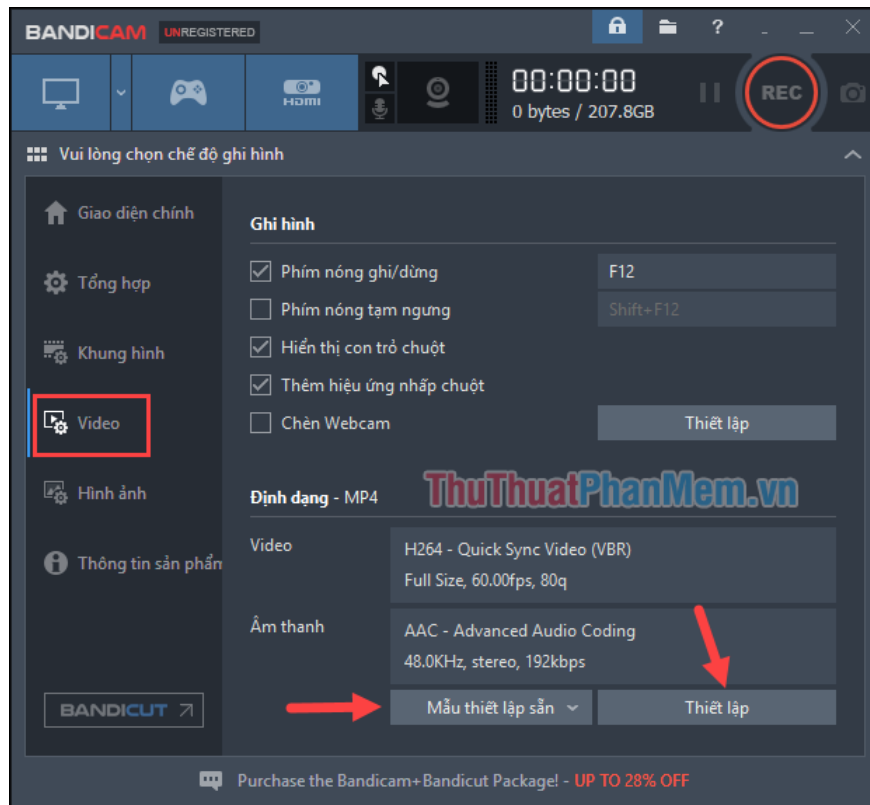

In the interface of BandiCam we can see quite a lot of screen recording modes such as: Record full screen Desktop, record an area of ??the screen, record a pulse around the mouse pointer, game mode and rotate the screen with a recording device such as a camera.

To record screen videos, we first need to make some settings. First we will select the folder to save the video after recording by selecting the General section then select the 3-dot icon and select the video storage folder in your computer.

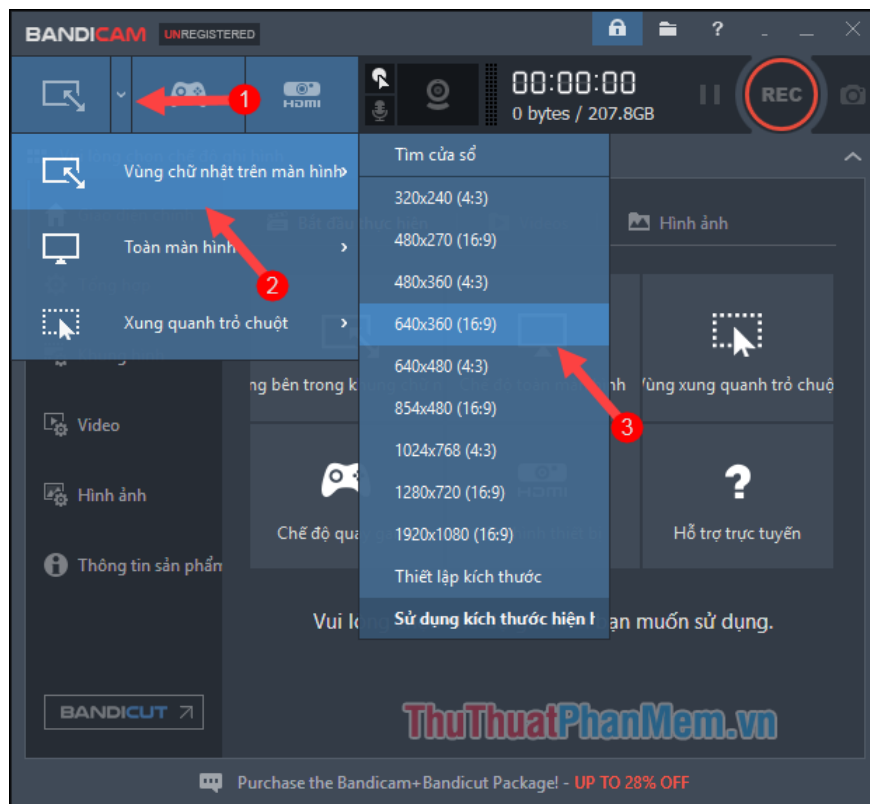

Next in the Video section, you can set the quality for the video by selecting the **Settings** section and then selecting the video quality level as well as the frame rate. Or you can choose the Preset templates also.

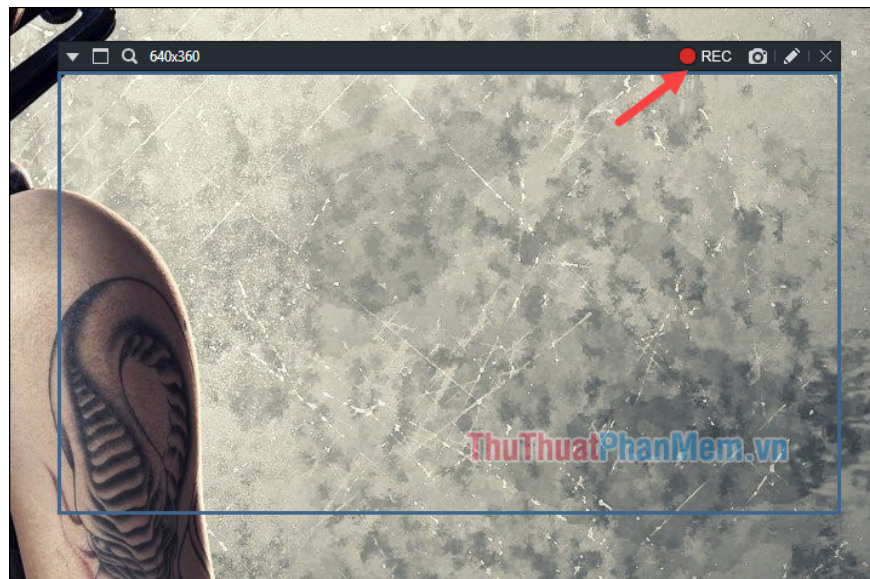

After setup is complete we will proceed to video capture.

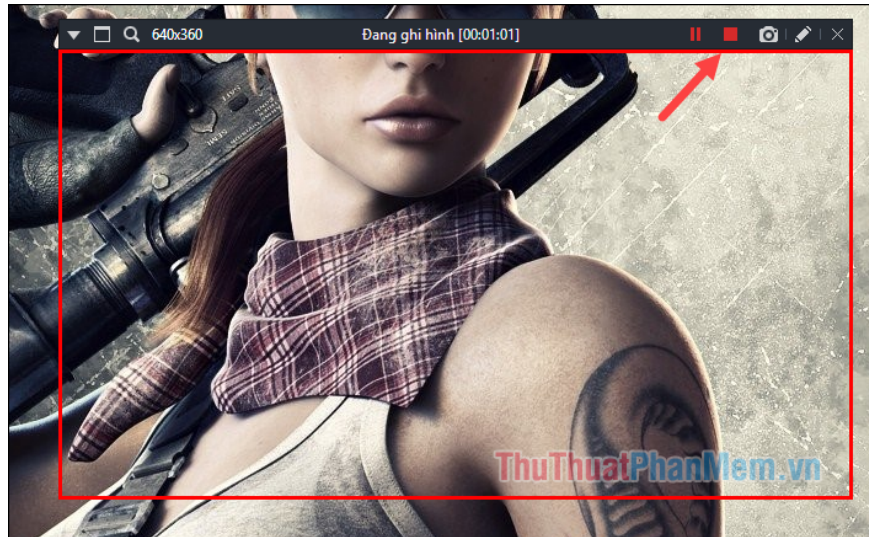

For example, here I will select the mode to rotate an area on the screen with the size: 640x360

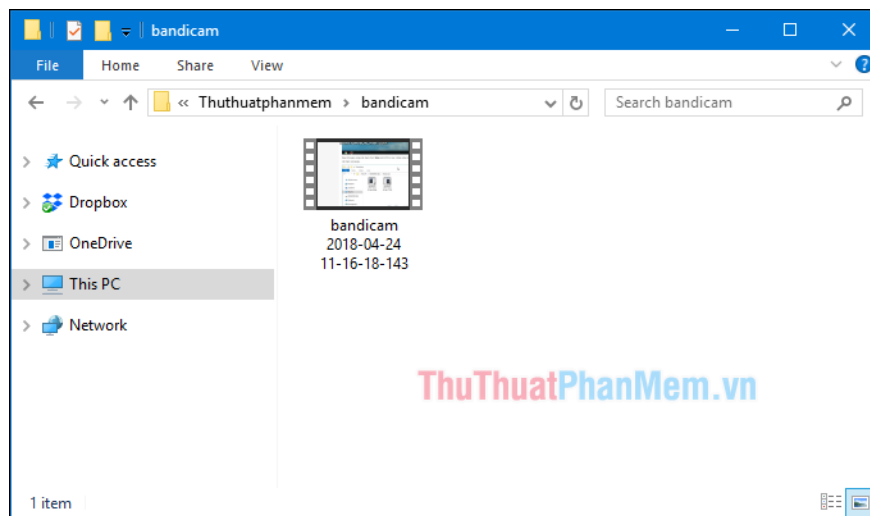

After selecting the recording mode you will see a rectangular frame appear on the screen, this is the screen area that the software will record. To start recording, click the red REC button.

To stop recording, click the square button as shown:

Now you can open the directory to save the video and review your results:

Above Thuthuatphanmem.vn has instructed you to record screen videos with BandiCam software with just a few simple steps, with Vietnamese language and intuitive interface, you will definitely not encounter any difficulties during using. . Good luck!
