

# Find inspiration to design user interface with UIDB

UIDB is a free inspirational collection that focuses on the kind of interface with a category that covers almost everything.

With thousands of inspirational online collections, there are many websites to collect user interface design ideas. But not all of these pages allow you to search by interface-related factors such as forms, login information, price lists or dashboard user interface.

That's why **uidb.io** became outstanding. It is a free inspirational collection that focuses on the kind of interface with a category that covers almost everything.

You can browse the web user interface to guide users, customize account pages, "meet the team" page ("meeting group" page) and more.

From the homepage, you will find the search bar in the top left corner. Start typing whatever you want and the search suggestions field will appear with keywords related to popular categories.

Suppose, you are looking for a design idea for the FAQ page (Frequently Asked Questions). In the search bar, type 'faq' and click on the proposed result.

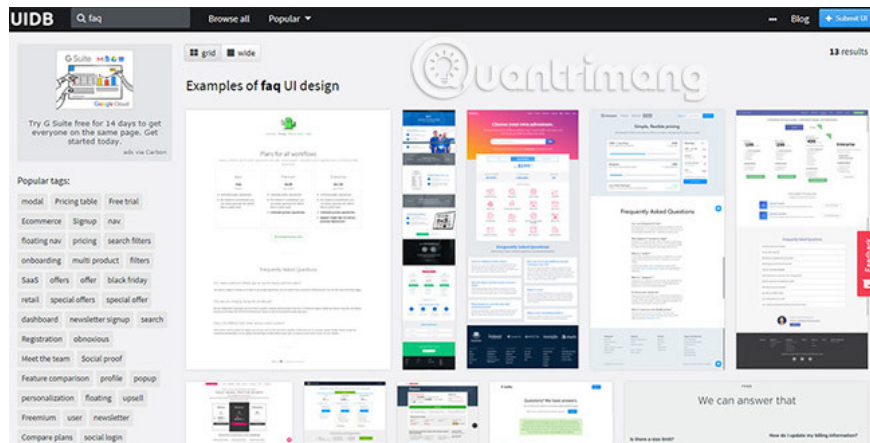

Then you can browse the FAQ interfaces from all types of websites. It's easy to do and you will even find proposed interface elements in the left sidebar.

Many of these suggestions are common user interface elements that designers use frequently.

## 1. Modals (Method)

2. **Gallery filters**
3. **Autocompletes** (Auto-complete)
4. **Search pages**
5. **Admin dashboards** ( **Admin dashboard** )
6. **Retail product pages**

Much of the content in UIDB includes website design, with ideas for single page layout and more complex layouts.

Click on any search result to see a larger screenshot of the user interface on the page, with a link to access the online example.

Most of the time, live pages will be moved or completely redesigned. But full screen preview is enough to research and gather ideas for your own projects.

Visit UIDB's main website and see how you feel! You can also submit a user interface request to add certain content to the library or you can share your thoughts directly with the **UIDB\_io** development **team** .
