Mozilla is determined to win back the second position in the lost web browser market to Google Chrome. FireFox 10 contains some more outstanding improvements compared to the release of FireFox 9.

Technologists highly appreciate the advantages in version 10, FireFox users no longer have to deal with the troubles arising from incompatible errors of extensions (extension, plug-in, add -on). Now, extensions will automatically be considered compatible with FireFox versions, except for special cases that will be marked with a warning.

Previously, an extension would be locked if it was marked incompatible with the version of FireFox in use, only reactivated when the developer released the update. This is frustrating for both the developer development

community and the user.

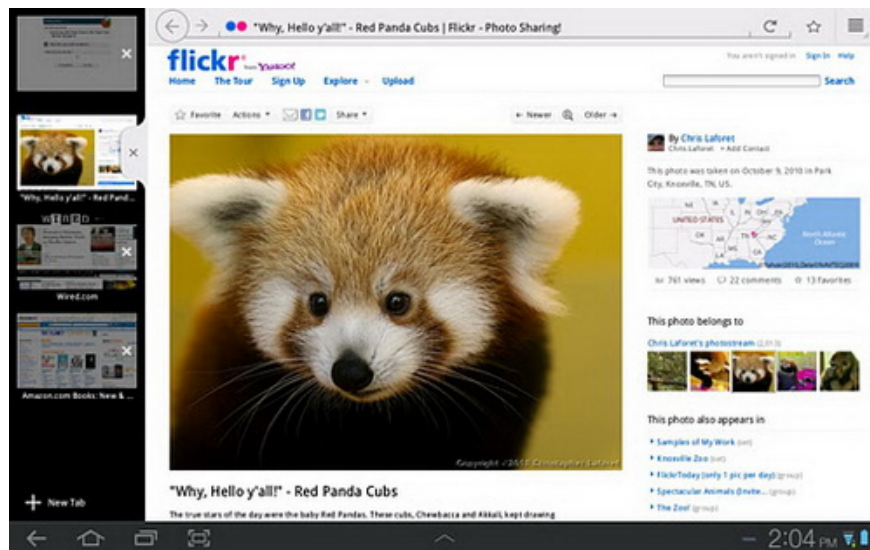

No more annoying about extension compatibility errors in Firefox 10 - *Artwork: Internet*

Mozilla wishes to perform the automatic update function in "silent" for both Firefox and the extension when there is a new version that the user does not have to do. As expected, Firefox 13 will have this capability.

Some changes in the interface section including the forward (forward) button are removed, adding some new tools for the development community (**Firefox** menu > **Web Developer**). The source "point" tool helps programmers quickly identify CSS and HTML codes in points indicated on a web page.

At the same time, Mozilla released a parallel version of Firefox 10 for the Android operating system, improving WebGL, OpenGL ES. Data synchronization and HTML5 compatibility are also improved. Firefox 10 mobile version compatible with Android 2.0 and above, can be downloaded from Android Market.

New functionality includes a right-click menu when selecting a phrase in an email and searching for them on the web. By default, the search results will also show up in the Thunderbird window.

Thunderbird is an email manager on Windows and Linux platforms that works similarly to Microsoft Outlook but is completely free and has many extensions to add functionality.
