The official version of Firefox 7 has been released by Mozilla a few minutes ago.

Mozilla Firefox 7.0 officially

The version of Firefox 7 Final has been considered one of the key updates of Firefox since the Firefox 4 era because in this new version of Firefox 7.0, Mozilla has solved part of the problem of RAM consumption of Firefox.

What is the new version of Firefox 7?

1. Improvements are taking into account the memory processing process in some specific use cases.
2. New **rendering backend** to speed up Canvas operation on Windows systems.
3. The process of changing bookmarks and passwords is almost synced directly when using Firefox Sync.
4. The 'http:///' URL prefix is hidden by default.
5. Supports text-overflow: ellipsis.
6. Support Web Timing specification.

7. Improve support for MathML.
8. WebSocket protocol is updated to version 8.
9. Add a opt-in system to users to send performance data to Mozilla to improve the next version of Firefox.
10. Fix issues related to stability.
11. Fix issues related to security.
