

First confirmation in the world: Having a brain tumor caused by using too many mobile phones

The court in Italy has recently concluded that a man has been suffering from a brain tumor due to excessive use of mobile phones.

1. 5 absolute things should not be done after eating

On April 11, an Italian court ruled that using a high-intensity mobile phone for a long time caused a man to have a brain tumor. This unfortunate case occurred with a Telecom Italia telecom operator, Mr. **Roberto Romeo**, who developed a brain tumor after years of using mobile devices to serve the needs of the job. The Italian National Institute for Occupational Accident Insurance will pay Roberto Romeo \$ 535 a month after doctors conclude that he suffered 23% of body damage.

In his allegation, the 57-year-old said he **had to use a cell phone provided by the company at a frequency of 3 to 4 hours a day for 15 years** before it was discovered. above brain tumor. Fortunately, this is only a benign tumor, but Roberto Romeo is still deaf on one ear after surgery, because doctors are forced to cut off his sound nerves.

Plaintiff Romeo insisted that he did not consider the use of the phone " *a devil* " but he suggested that people should be seriously aware of health and safety issues when using mobile phones. . According to the lawyer of Romeo, Stefano Berton, this sentence first appeared in the world; The link between mobile phone use and tumor growth within the brain is a controversial topic in medicine. Will this true relationship lead to the formation of benign or malignant tumors? Many studies of mobile phone effects on the human body have yielded conflicting results. Although this sentence seems to be isolated based on the doctor's testimony, there is no consensus about

the extent of the danger of the tumor - it may be benign or malignant - by using the phone continuously for a while long time.

In 2011, the *International Agency for Research on Cancer* , a branch of the World Health Organization, appointed a Working Group expert to review all available evidence about the use of mobile phones. The team's findings categorized mobile phone use as potentially cancer-causing. The American Oncology Institute recommends that mobile phone users should shorten their mobile conversations if possible or use hands-free or wireless hands-free devices such as bluetooth headsets to **keep distance away. Far between the phone and the head** to avoid direct impact of radio wave energy to the brain and nervous system.
