

First Nubia Watch review: Unique flexible screen

Nubia Watch is considered an upgraded version of Nubia Alpha, which was released last year, but the perfection is better.

Nubia Watch owns a 4.01-inch flexible **AMOLED** screen with a resolution of 960 x 192, which can be wrapped around the wrist. The device has a ceramic frame and the power button on the side is made of aluminum alloy based on the nano injection process.

The feeling of wearing is quite comfortable because the weight is not too heavy, the silicon strap is soft, but compared to conventional watches, it is definitely not as happy. The screen has no imprint like a folding screen smartphone. Moreover, when worn, it is also a bit difficult because the joints are a bit stiff, the screen part is only bent inside, but cannot be bent out.

The Nubia Watch has a frame that connects the screen and the band is made of 316L stainless steel. Unfortunately, this is just a silicone cord, not a Napa leather strap, made from imported Italian calfskin.

Nubia Watch is durable and scratch resistant, so it can be used for regular wear. You can customize your watch style with hundreds of screen designs downloaded from the Nubia app.

The point I quite like is that this curved screen can create a dynamic effect that turns the watch into a high-tech fashion item. Share from the owner of this watch said that wearing Nubia Watch out, many people asked, curious about this product.

Nubia Watch supports calling function independent of eSIM of some Chinese carriers, supporting mobile payments. Nubia Watch also supports the Wake-up feature to wake up the screen when users raise their wrists, monitor sleep, measure heart rate.

The product is IP54 dust / water resistant. The manufacturer announced the Nubia Watch's battery life up to 7 days, 425mAh battery capacity, 85 minutes full charge time. 1GB RAM, 8GB ROM, Bluetooth 4.1 connectivity.

This product is priced at \$ 257 in three color options: Black (Knight Black), Blue (Armor Green) and Red (Flame Red).
