Select Try again, and if that doesn't work, contact Microsoft support for help.  
Error code 0x8007007f

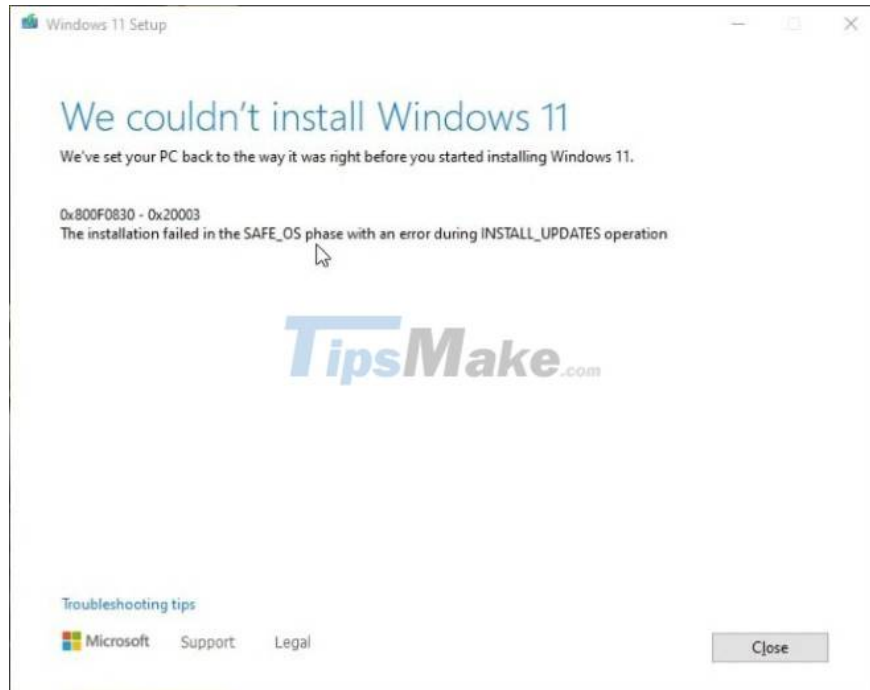

In addition, there is also the possibility that error 0x8007007f is related to certain drivers that are already installed. To solve, you can restart the device or restart the installation process. You can also try going to the manufacturer's website to download and install the drivers manually.

Another solution that you can consider is to download the Windows 11 ISO file and mount it in File Explorer then run **setup.exe**.

## How to fix error 0x800F0830 - 0x20003

According to speculation, error 0x800F0830 - 0x20003 is also related to drivers and currently there is no best solution.

If you are facing problems during the Windows 11 upgrade process that we haven't covered yet, try downloading the Windows 11 ISO file, then mount it and perform the upgrade in place. This solution is supposed to fix quite a few problems.

If you don't upgrade to Windows 11 and stick with Windows 10, you'll continue to receive security updates from Microsoft until 2025.

Also, if your computer is eligible but still haven't seen an upgrade to Windows 11, don't panic. Microsoft usually rolls out updates in batches, not in a massive fashion. It is expected that between now and mid-2022 Microsoft will complete the Windows 11 update process for eligible Windows 10 computers.

Good luck.
