

Fix File Explorer error not working on Windows 10

Here are a few solutions to help users overcome when File Explorer errors do not work, each time opening the system data manager suddenly closed on Windows 10.

Here are a few solutions to help users overcome when File Explorer errors do not work, each time opening the system data manager suddenly closed on Windows 10.

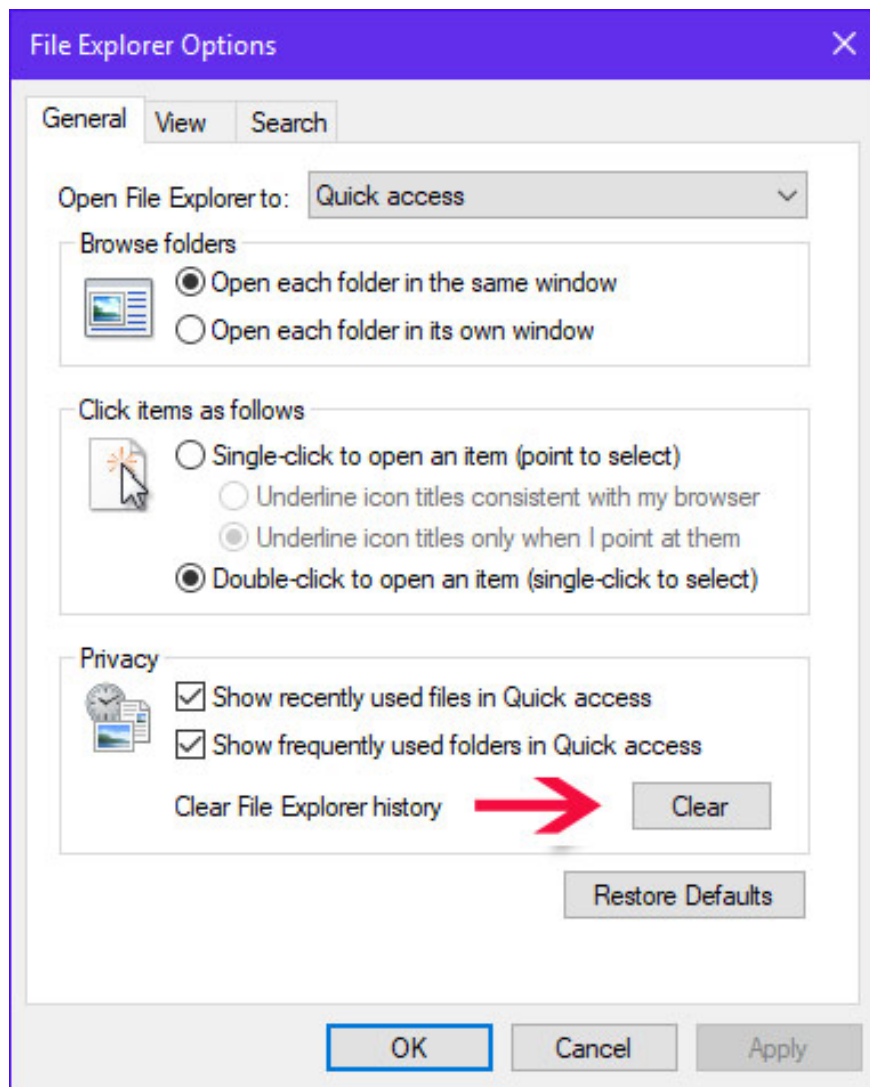

Method 1. Delete File Explorer history.

Click **Cortana** -> type **Control Panel** in the search box -> press **Enter** .

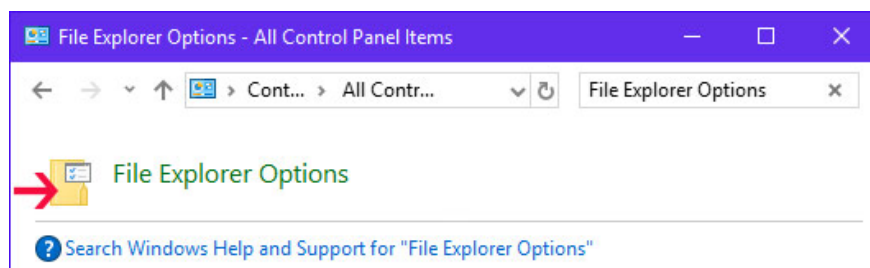

Then, type **File Explorer Options** into the **Control Panel** search box . When you have the search results, click on File Explorer Options to open it.

In the File Explorer Options window -> in **General** -> click on **Clear** -> select **OK** .

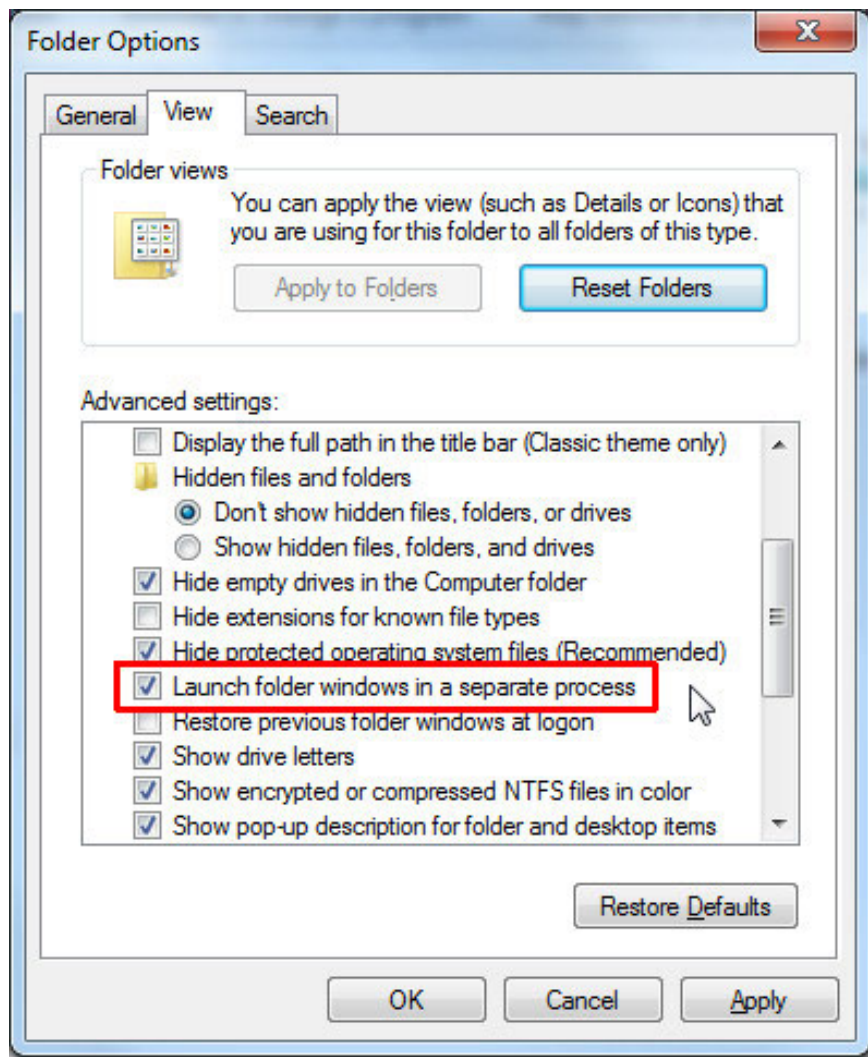

Method 2. Launch the Windows folder in a separate process

Open **Control Panel** -> search and open **File Explorer Options** .

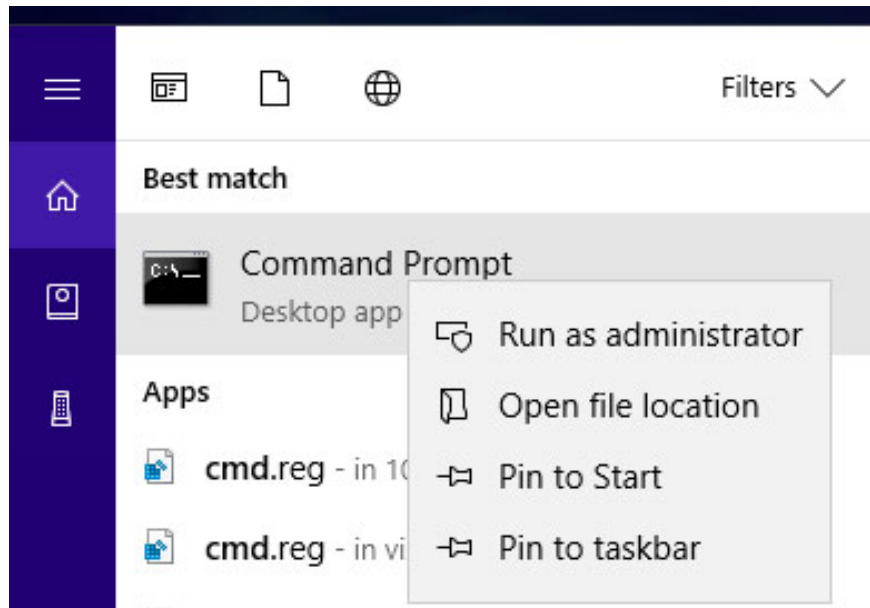

In the File Explorer Options window -> select the View tab -> check the **Launch folder windows in a separate process box** -> click **OK** .

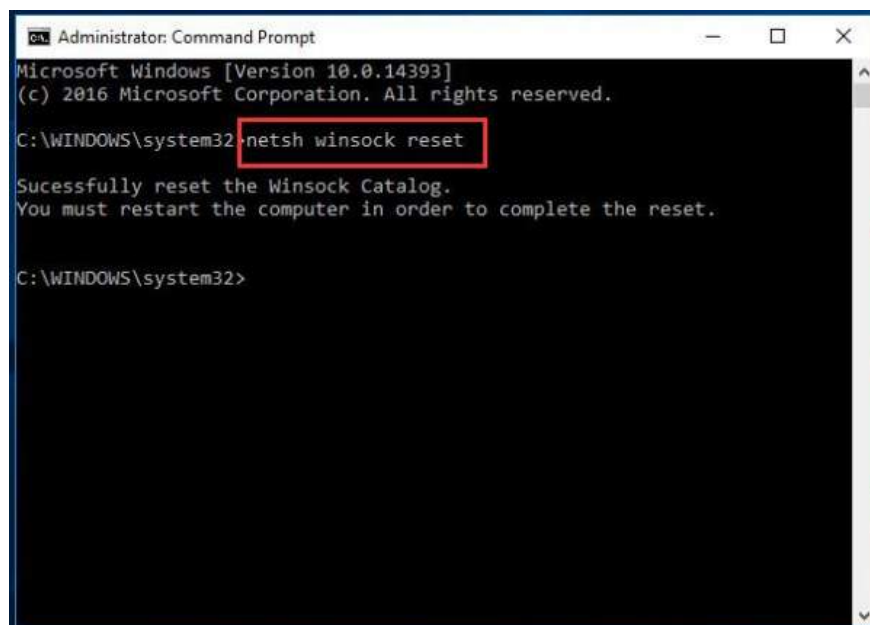

Finally, start File Explorer to check the results.

Method 3. Run netsh and winsock reset

Open Cortana -> enter **cmd** in the search box -> right-click **Command Prompt** -> select **Run as administrator** -> select **Yes** to run with system administrator rights.

Enter the **netsh winsock reset** text entry -> press **Enter** . If it appears **Successfully reset the Winsock Catalog** line as shown below is successful.

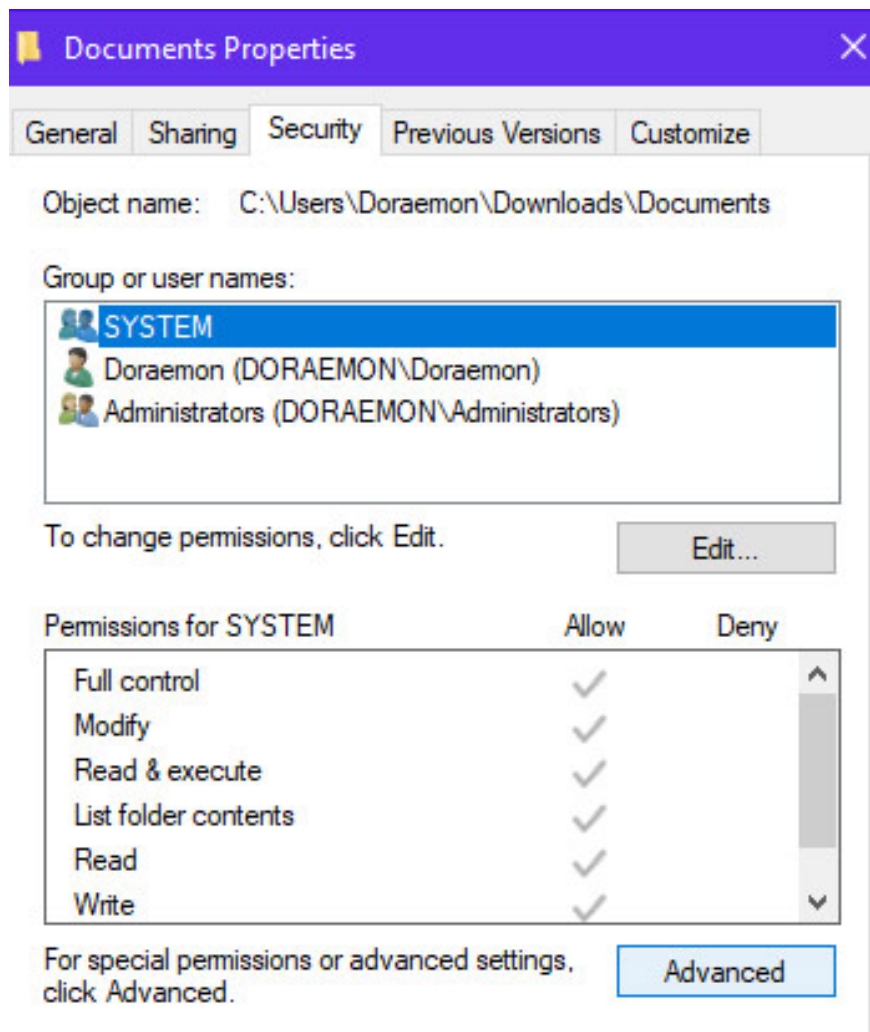

Close the Command Prompt window, restart the computer, and open File Explorer to check.

Method 4. Grant full access to your account

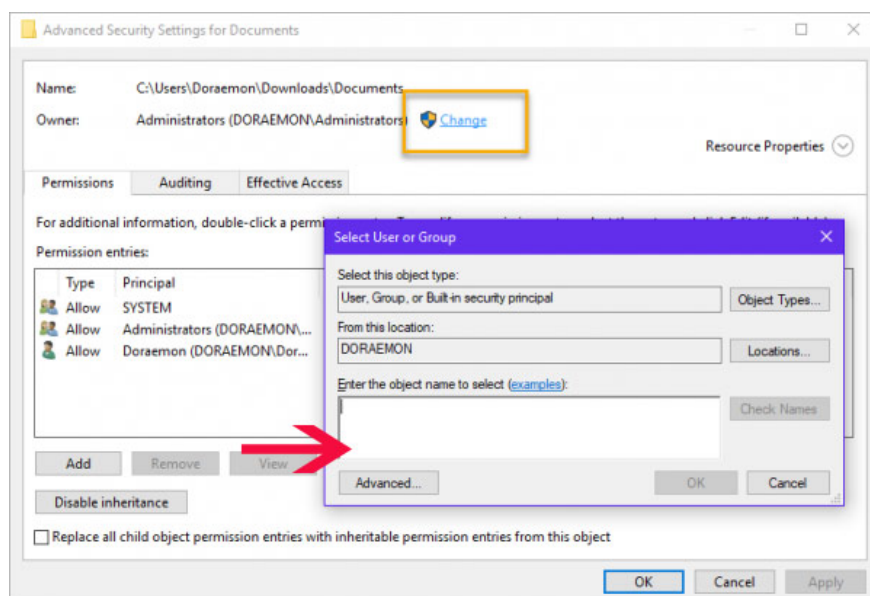

Open **File Explore** r -> right-click any folder and select **Properties** .

If you cannot open File Explorer, right-click on the screen -> select **New** -> select **Folder** -> right-click on the newly created folder -> select **Properties**.

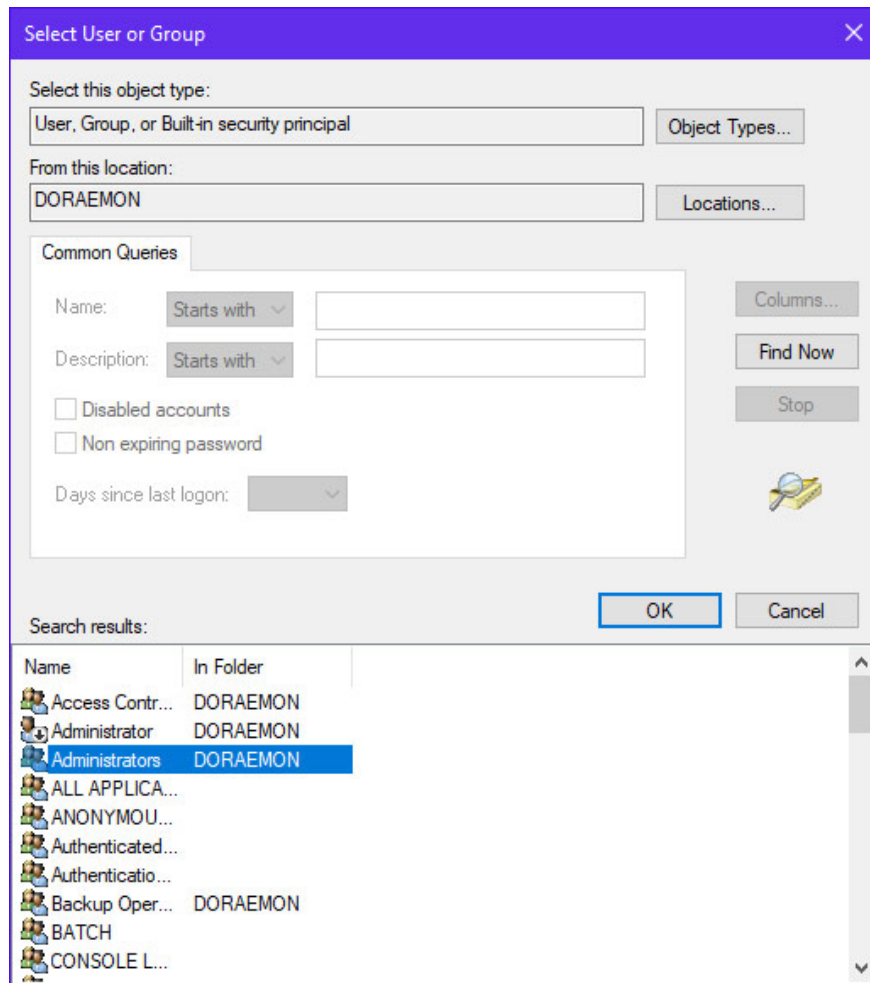

In the **Documents Properties** window - select the **Security** tab -> click the **Advanced** button.

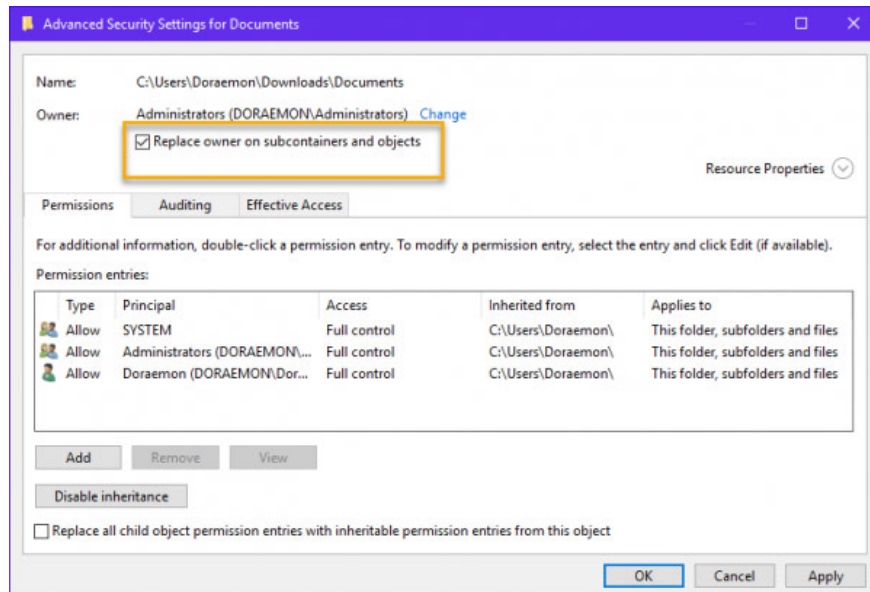

The Advanced Security Settings window -> click **Change** and enter your account name in the box **Enter the object name to select** -> click **OK** .

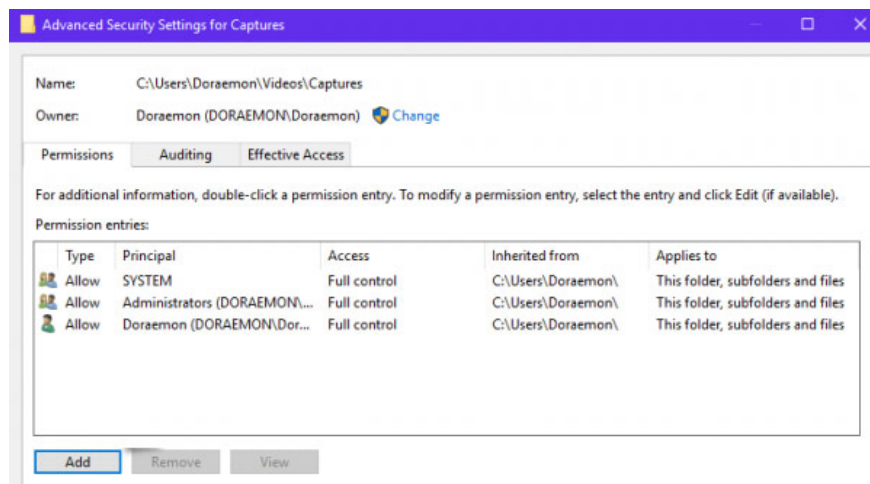

To know the account name, select **Advanced** in the window Select User, Computer, Service Account, or Group -> select Find Now -> click on the computer account name -> select -> OK -> OK.

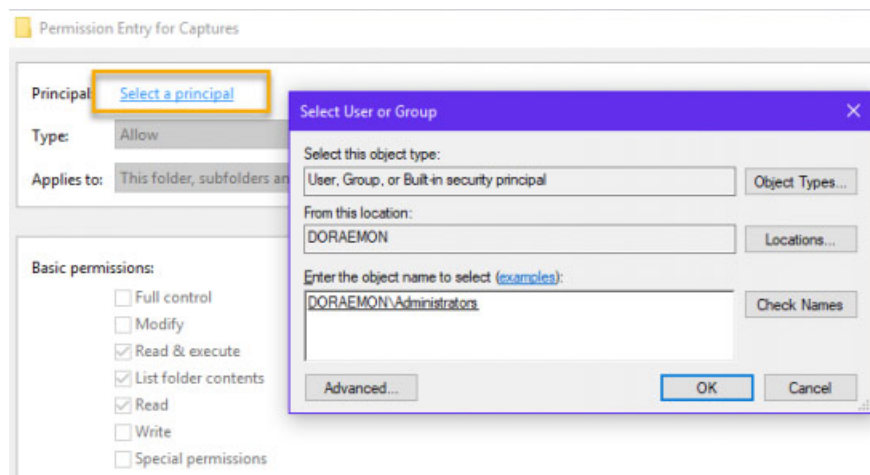

In the Advanced Security Settings window -> check the **Replace owner on subcontainers and objects box** -> select **OK** .

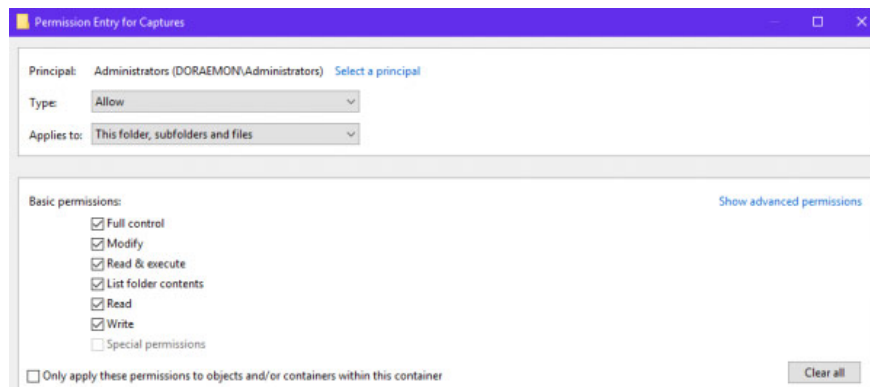

Open **File Explorer** -> open the **Properties** of your account-owned folder -> Click the **Advanced** button -> select the **Permissions** tab -> select **Add** .

Click on the words **Select a principal** -> Enter your computer account name -> click **OK** .

Finally, in the new window that appears, in the Type box select **Allow** -> in Basic permissions select **Full Control** -> select **OK** .
