

Fix iPhone phone keyboard error running iOS 10 almost 'freeze'

After upgrading and using iOS 10, iOS users encounter some errors on their device. Recently, many users reflect that the keyboard on their iPhone 10 iOS device suddenly froze, not using any keys. To overcome this error, Network Administrator will introduce and guide you to some solutions to overcome.

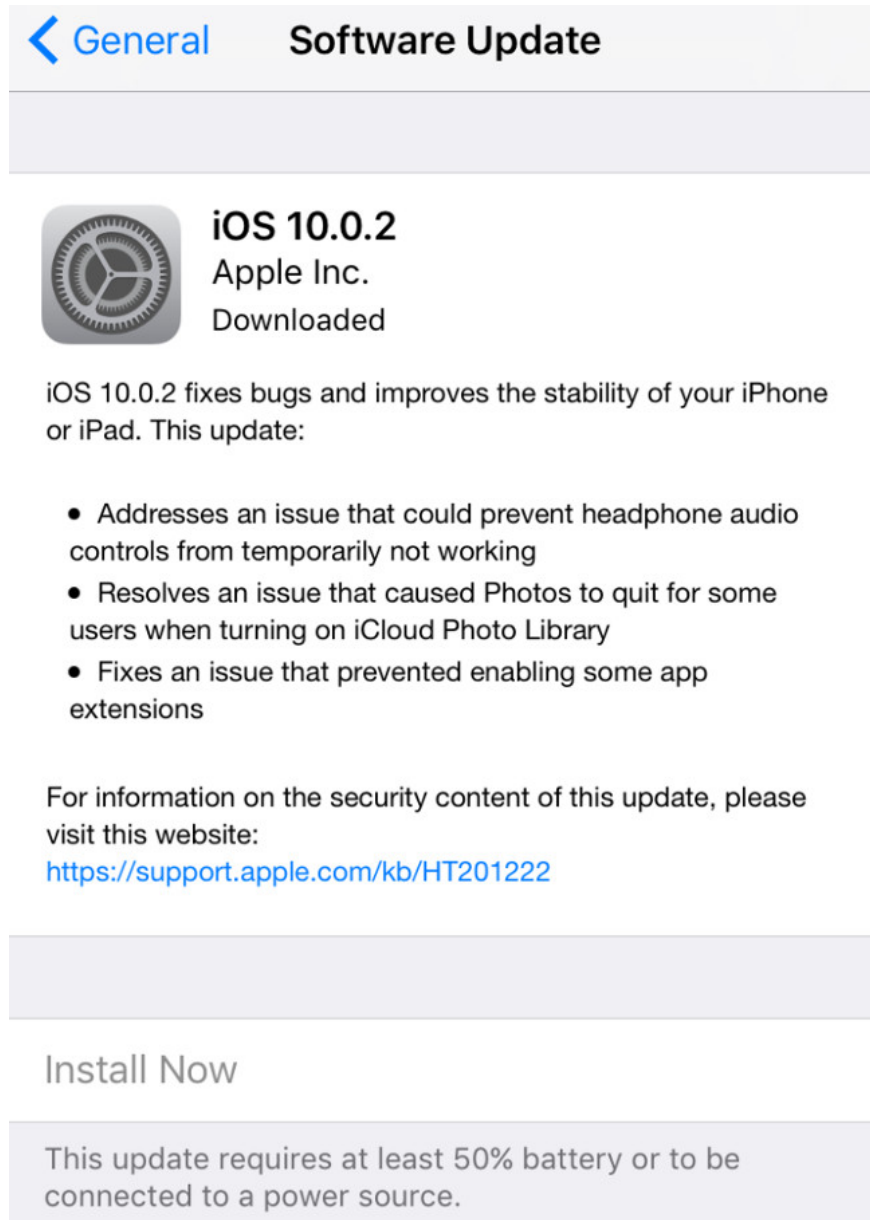

After upgrading and using iOS 10, iOS users encounter some errors on their device. Recently, many users reflect that the keyboard on iPhone running their **iOS 10** operating system is suddenly "*frozen*", cannot use any keys. To overcome this error, Network Administrator will introduce and guide you to some solutions to overcome.

1. Update to the latest firmware version

The first solution you can try to fix the error is to update (update) the latest firmware version for your iPhone phone. Currently the latest firmware version is 10.0.2.

To update to the latest firmware version for iPhone, open the **Settings => General => Software Update application** , then click the **Install** button to update your device.

The screenshot shows the 'Software Update' screen in the iOS Settings app. At the top, there is a navigation bar with a back arrow and the word 'General' in blue, followed by 'Software Update' in black. Below this is a large grey bar. Underneath, there is a circular icon representing the update, followed by the text 'iOS 10.0.2', 'Apple Inc.', and 'Downloaded'. A paragraph of text describes the update: 'iOS 10.0.2 fixes bugs and improves the stability of your iPhone or iPad. This update:'. Below this is a bulleted list of three items: 'Addresses an issue that could prevent headphone audio controls from temporarily not working', 'Resolves an issue that caused Photos to quit for some users when turning on iCloud Photo Library', and 'Fixes an issue that prevented enabling some app extensions'. Further down, there is a paragraph: 'For information on the security content of this update, please visit this website:' followed by a blue hyperlink: '<https://support.apple.com/kb/HT201222>'. Below this is another large grey bar. At the bottom, there is a button labeled 'Install Now'. Below the button is a grey box containing the text: 'This update requires at least 50% battery or to be connected to a power source.'

2. Hard Reset

To perform Hard Reset on iPhone phones, follow the steps below:

Step 1 :

Press and hold the On / Off button of your iPhone.

Step 2 :

While pressing and holding the device On / Off button, press and hold the Volume **down** button simultaneously.

Step 3 :

Press and hold the buttons until the device screen is **black** , then proceed to **reopen your** device to display the Apple logo.

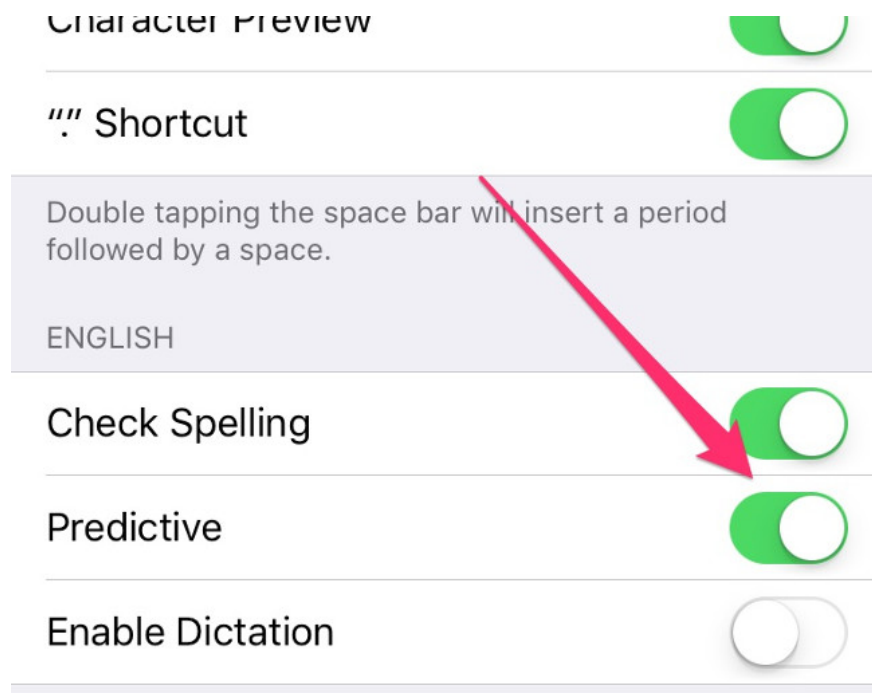

Step 4 :

Wait a few seconds for your device to complete the boot process.

3. Disable Predictive Keyboard feature

Predictive Keyboard feature is integrated on iOS device to display word suggestions for users. However, in some cases this feature makes users feel uncomfortable, and that may be the cause of the iOS 10 keyboard error almost frozen. Therefore you should disable this feature.

To **disable** Predictive Keyboard, go to **Settings => General => Keyboard** . Scroll down to find and change Predictive status to OFF.

4. Turn off Check Spelling

Step 1 :

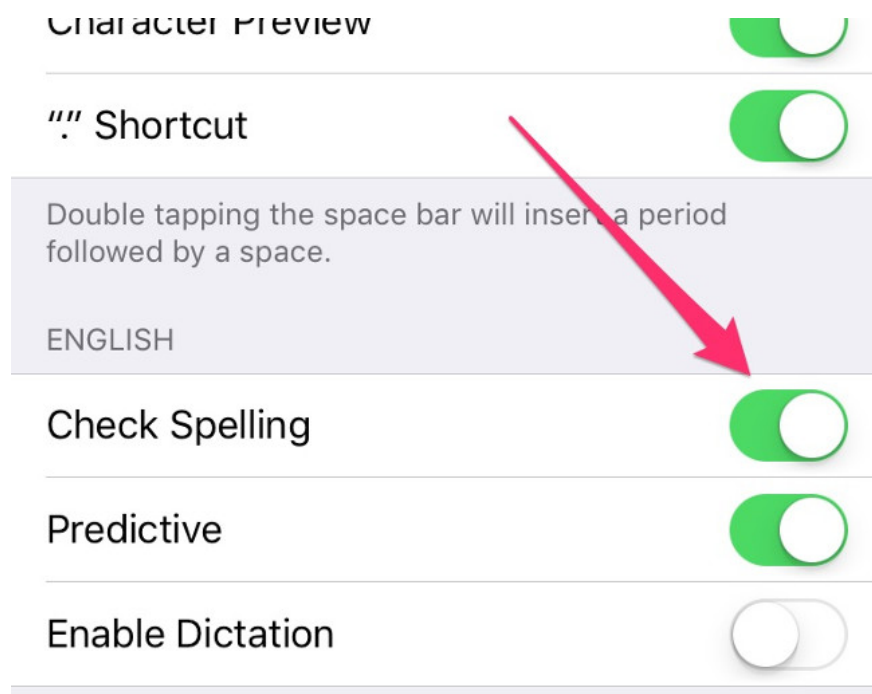

Go to Settings => General.

Step 2 :

Open Keyboard.

Step 3 :

Scroll down to find and move Check Spelling to OFF.

5. Reset all settings

Step 1 :

Go to Settings => General.

Step 2 :

Scroll down to find and click Reset.

Step 3 :

Select Reset All Settings and enter your passcode if required.

This process will not delete any data on your device but only reset the device settings.

Reset All Settings

Erase All Content and Settings

Reset Network Settings

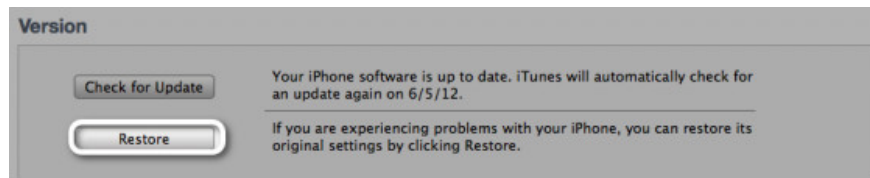

6. Restore iOS device

To restore your iOS device with iTunes, follow the steps below:

Before restoring your iOS device, you should **back up your data** using iTunes or iCloud.

- **Connect** iOS device to computer.

- On the iTunes window, in the Devices section select your iOS device. Then select the **Summary tab** and then click the **Restore** button.

- Next click on Restore.

- After restoring, your iOS device will **restart** . And you will see the slide button **Slide to set up** .

- On the next screen, follow the steps to complete the setup by selecting the language and country, select whether you want to activate **Location Services** or not. When asked, choose your Wifi connection.

- You will be asked to set up your iOS device by **restoring from iCloud Backup**, iTunes backup or setting up as a new device.

- Select the setting you want and follow the instructions.
