How to fix iPhone without personal access point to play 3G

The reason for an iPhone error with no personal access point is that the iOS device configuration has lost its configuration, so this feature is hidden. To re-enable the personal access point you must re-add this configuration section according to the steps below:

Step 1: Turn on mobile data network.

From the main screen, go to *Settings* > *Cellular* > *Cellular Data Options* > *Cellular Data Network* (For devices using Vietnamese will be: *Settings* > *Mobile* > *Mobile data options* > *Mobile Data Network*).

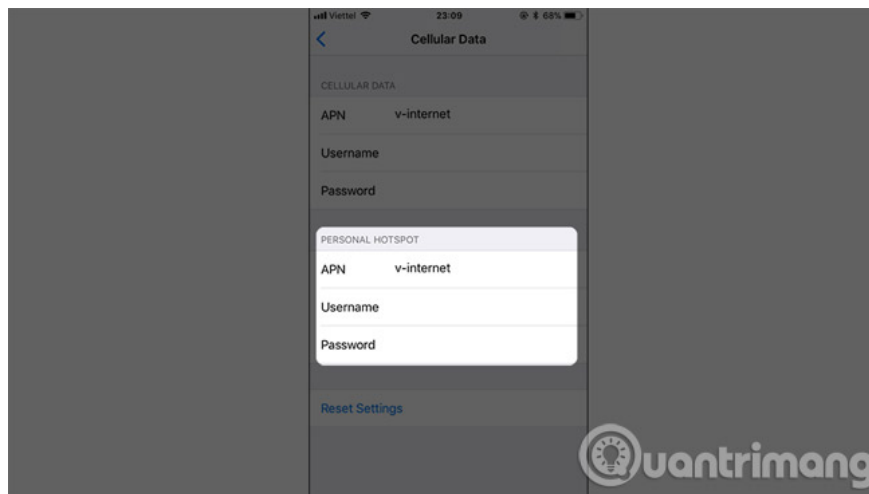

Step 2: Reset APN personal access points to suit each carrier.

When you scroll down you will see the boxes to enter the network parameters, here you proceed to enter the parameters corresponding to the network you are using. The APN parameters of each network in Vietnam today are:

1. VinaPhone: APN: m3-world, Username: mms, Password: mms.
2. Mobifone: APN: m-wap, Username: mms, Password: mms.
3. Viettel: APN: v-internet, Username: (left blank), Password: (left blank).
4. VietnaMobile: APN: internet, Username: (left blank), Password: (left blank).

For example, in this article using Viettel network, you will fill in the APN section as v-internet as shown below:

Step 3: Conduct a connection to play 3G

After finishing the process of entering the parameters corresponding to the network of the SIM you are using, you return to the Cellular section will immediately see the Personal Hotspot section appear again. It is now possible to connect to play 3G as usual.

Note: If the original iPhone or SIM card restore settings, this parameter will be lost, so the best way is to save the configuration according to the network operators to use when needed.

So, with a few simple steps, your personal access point has been used normally and can continue to share the network for other devices to use. In addition, many iPhone users often encounter cases of 3G data connection but cannot access the network, you need to know how to fix the iPhone 3G error to apply in necessary situations.

Hope the article is useful to you.
