On Windows 10 operating system, sometimes you will encounter applications that have just started working that stopped responding. Normally, you will notice this, because in the title bar the application says "Not responding" - an error that prevents you from closing the application and causing the computer to hang. You may have to wait for a while to close the application. This article will share with you the solution to solve this problem.

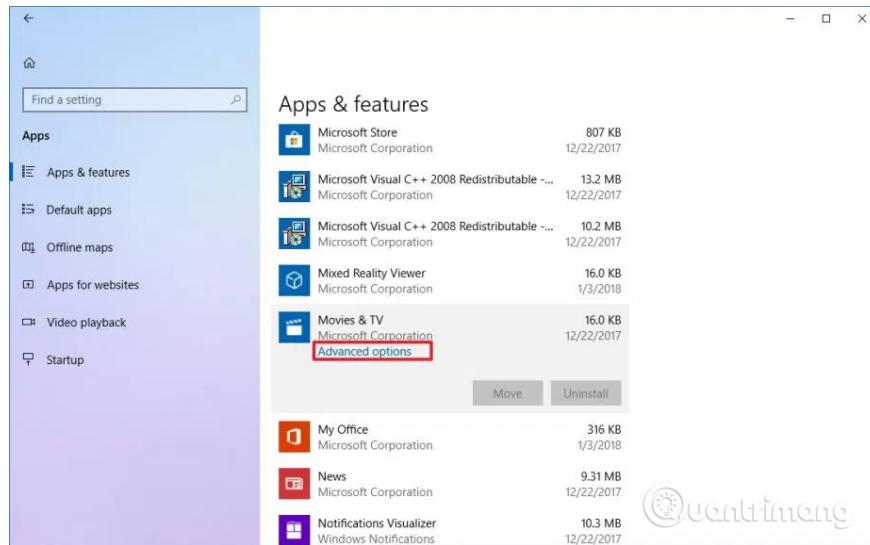

Previously, you could only use **Task Manager** to close the application, but now developed to integrate all Windows 10 settings in the same location, the **Settings** app now includes an option to close the applications in the page. install apps.

In this tutorial, you will learn the steps to quickly close an application when you are not responding on Windows 10 using the **Settings** application and **Task Manager** .

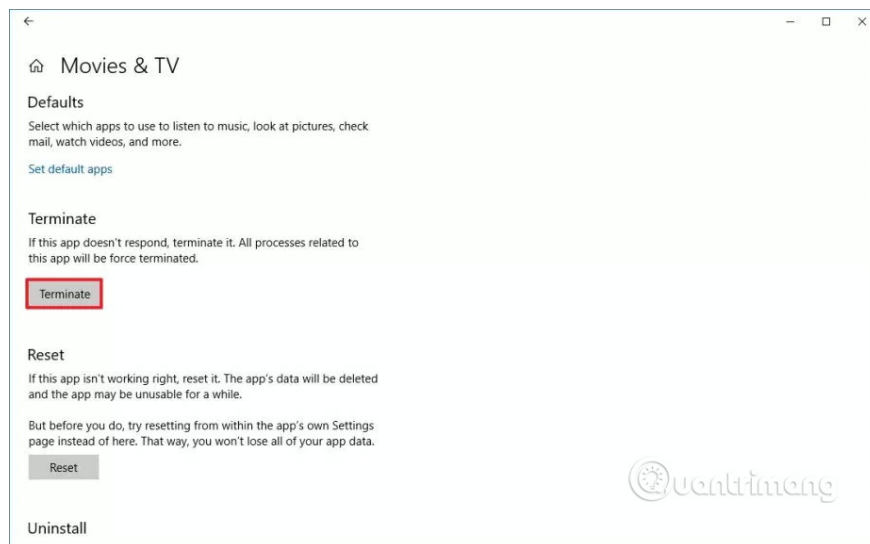

Use Settings to fix Not responding on Windows 10

If you are having problems with a Microsoft Store application, you can quickly close applications and related processes using the Settings application.

1. Open **Settings** .
2. Click **Apps** .
3. Click **Apps & features** (Apps and features).
4. Select the active application and click the **Advanced options** link.

5. Click the **Terminate** button.

Once you have completed the steps, the problematic application and the related processes will close. Then you can reopen and start using the application, but this time (hopefully) there is no problem.

Alternatively, you can right-click on the application's **Live Tile** from the Start menu, select **More** and click **App settings** to quickly navigate to the settings page for a specific application.

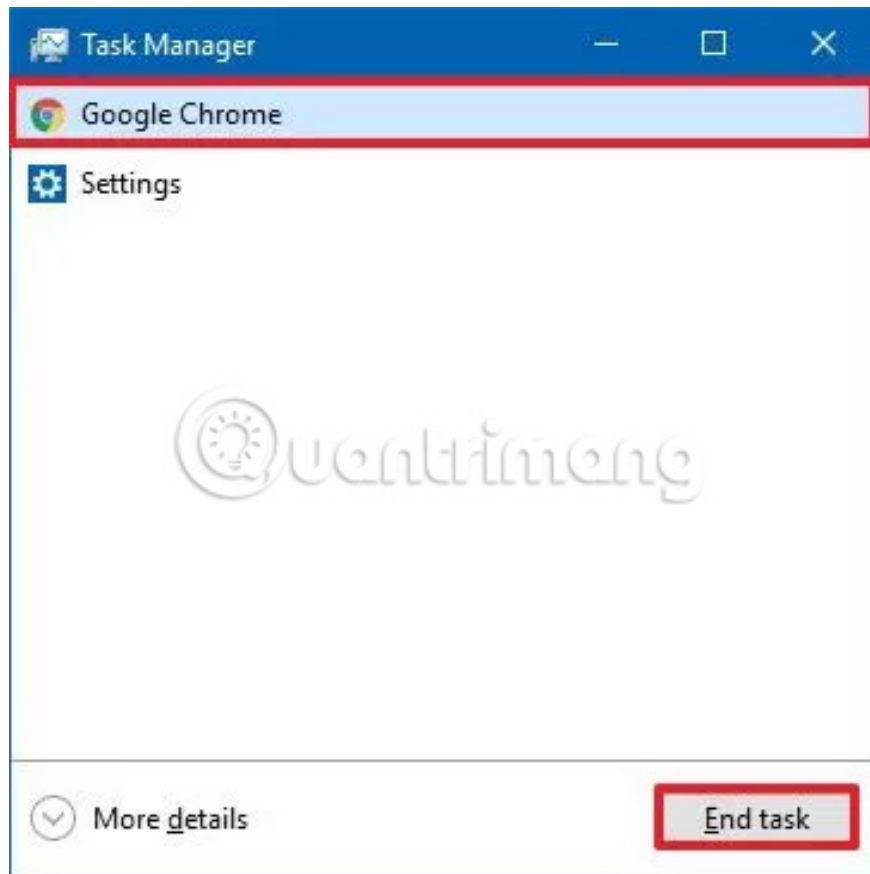

Use Task Manager to fix Not responding on Windows 10

In case the problem is a traditional desktop application, you can still use **Task Manager** to close the application and end the related processes manually (if needed).

1. Right-click the taskbar and select **Task Manager**.

2. Select an unresponsive application.

3. Click the **End task** button.

After completing the steps, the problematic application will close and you can restart the application without any problems. Alternatively, you can quickly open Task Manager with the shortcut **Ctrl + Shift + Esc**.

However, another quick way to close an unresponsive application is to use the keyboard shortcut **Alt + F4** while the application is launching.

If you do not see the option in the application settings page, it may be because you are not running Windows 10 operating system version 1803 (Redstone 4) released in 2018. The ability to close applications and related processes of Microsoft Store is making its way on Windows 10 starting from build 17063.
