

Fix out of memory error in Adobe After Effects

After a period of use, many people often encounter an error reporting that After Effects is out of memory, affecting your video processing. Below are instructions on how to fix the After Effects out of memory error.

After Effects is a professional video editing software that many people choose to use. However, after a period of time, many people often encounter an error that says they are out of memory in After Effects, affecting your video processing. There are many reasons that lead to out of memory errors in After Effects. Below are instructions on how to fix the After Effects out of memory error.

How to fix out of memory error in Adobe After Effects

Restart After Effects

First of all, you should try restarting the application to fix any existing errors in the software. If restarting the application does not work, you can restart your computer and open After Effects again.

Update graphics card driver

Using an outdated graphics card driver can cause incompatibility and program errors. Update your graphics card driver to the latest version to fix this error.

1. 5 basic ways to update drivers for your computer

Step 1:

Press **the Win + X key combination** and select **Device Manager** from the displayed list.

Installed apps

Mobility Center

Power Options

Event Viewer

System

Device Manager

Network Connections

Disk Management

Computer Management

Terminal

Terminal (Admin)

Task Manager

Settings

File Explorer

Search

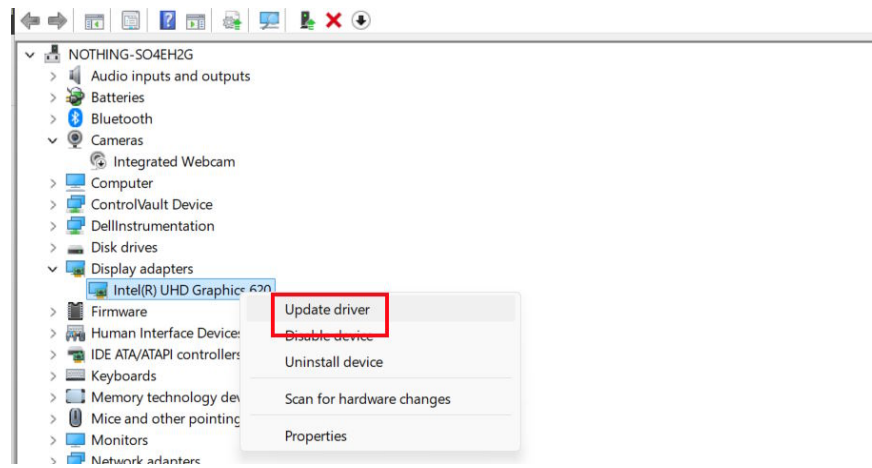

Run

Shut down or sign out >

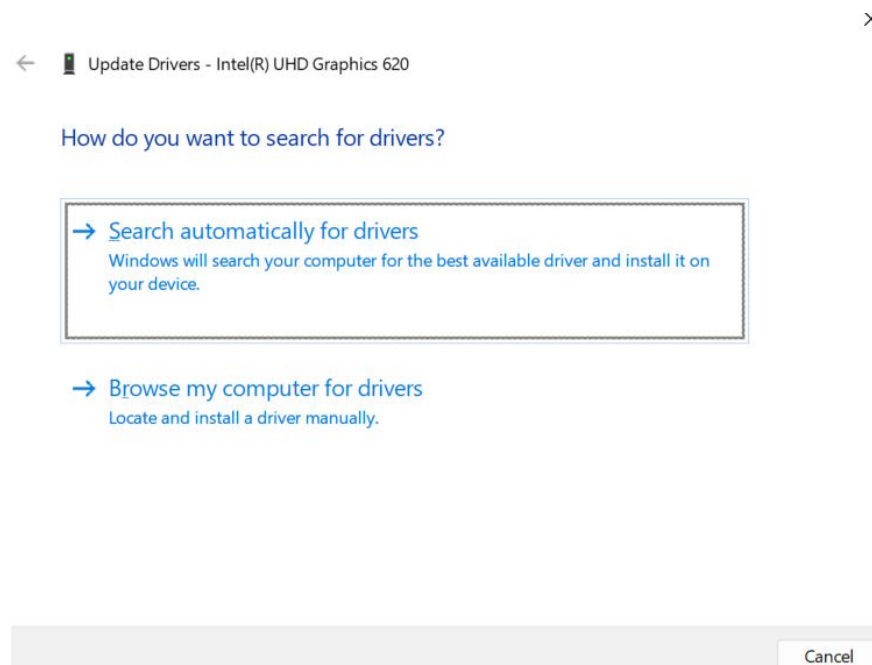

Desktop

Step 2:

Expand the **Display adapters** section , then right-click on the graphics card and **select Update driver** .

Now you click **Search automatically for drivers** to check for the new version of this driver and update.

Update After Effects to the new version

An outdated application can also cause the After Effects low memory warning error. In this case, try updating After Effects to fix the error.

Access Help on the software interface, then select Updates to check for new versions of the software and update.

In case the new version has an error, we go back to the old version. Open the Creative Cloud application, then select the Apps tab and scroll down to Find Additional Apps. Here, select View Previous Versions to review the old version of the application and proceed to reinstall the old version.

Adjust settings on After Effects

Some settings in the application also cause After Effects memory errors. Try adjusting some settings in the application to fix this error.

1. Disable any third-party plugins.
2. Turn off Mercury Transmit: Go to Edit > Preferences > Video Preview and uncheck Enable Mercury Transmit.
3. Clear layer cache: Hold down the Shift key and click Preferences, then uncheck Enable Layer Cache.

Free up computer memory

The problem may be that your computer is out of memory, resulting in no more memory to open and use After Effects features. Please use the tools or software below to clean up the memory on your computer.

1. How to use Storage sense Windows to free up disk space
2. How to Clean Windows PC Using Command Prompt
