

Fix red screen on Windows

When you encounter a red screen error on Windows, what you will have to do to fix it, many have encountered a blue screen error before, but in the case of a red screen error, it is probably less, the content below, Taimienphi will guide you How to fix red screen error on Windows, especially Windows 7 if you encounter it.

The red screen error was recorded due to a Microsoft patch for the Windows 7 operating system that caused users to not be able to boot the operating system anymore. Patch number KB3133977 for Windows 7 was upgraded by many users and encountered the above situation, if you intend to upgrade, please pause.

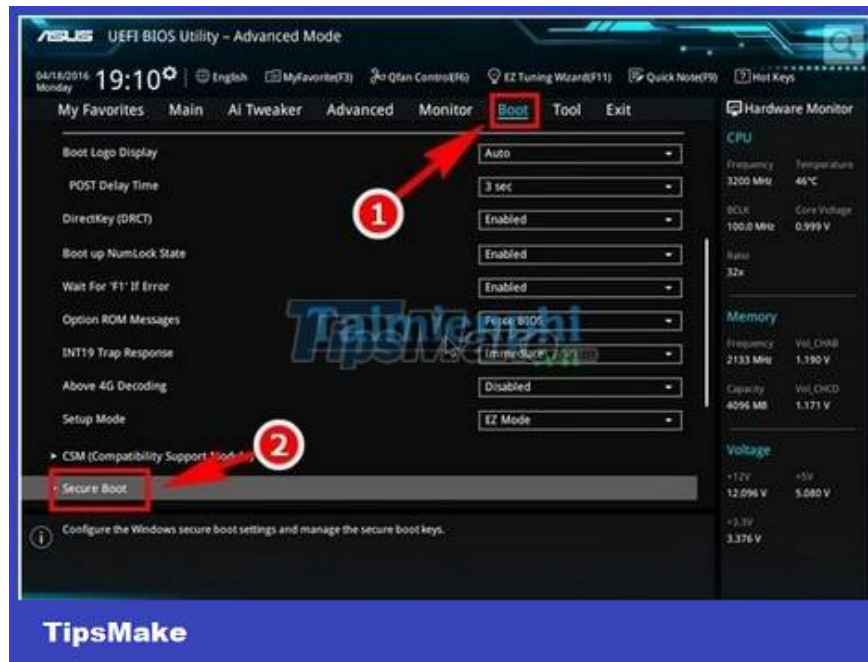

As far as is known, this is a conflict between the patch and the mainboards that have the secure boot feature enabled in the Bios. Mostly Asus motherboards. If you are using Asus Mainboard, you can press F2 or Delete to enter the bios (depending on the model). Or if you are using a laptop, you can refer to how to enter the bios of some laptop models. Because on each laptop, each row has its own shortcuts, so you need to learn how to enter the bios of some laptops before fixing the red screen error on Windows.

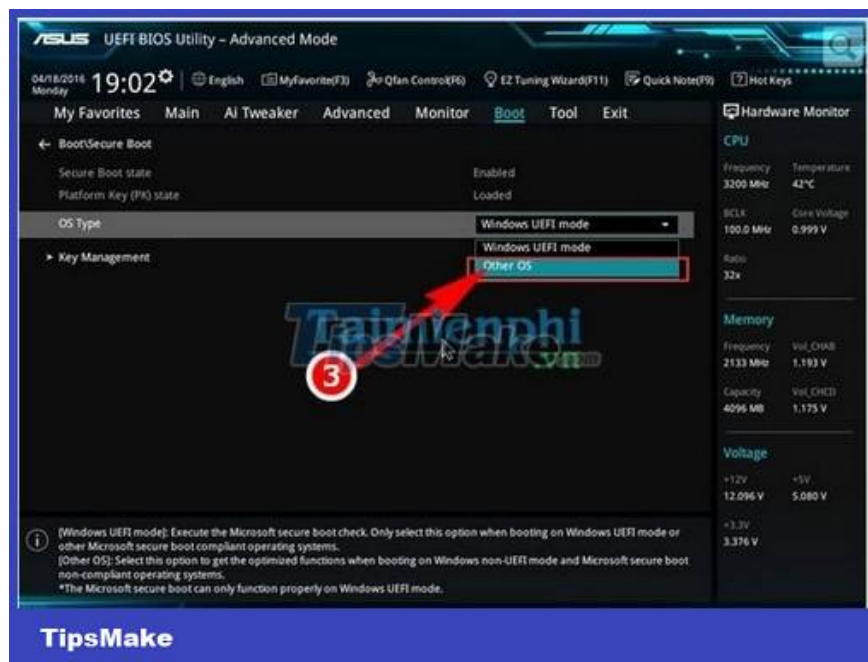

Instructions to fix red screen errors on Windows

Step 1: Access the BIOS system by pressing Delete (or F2, F12) or refer to the way to enter the laptop bios mentioned above.

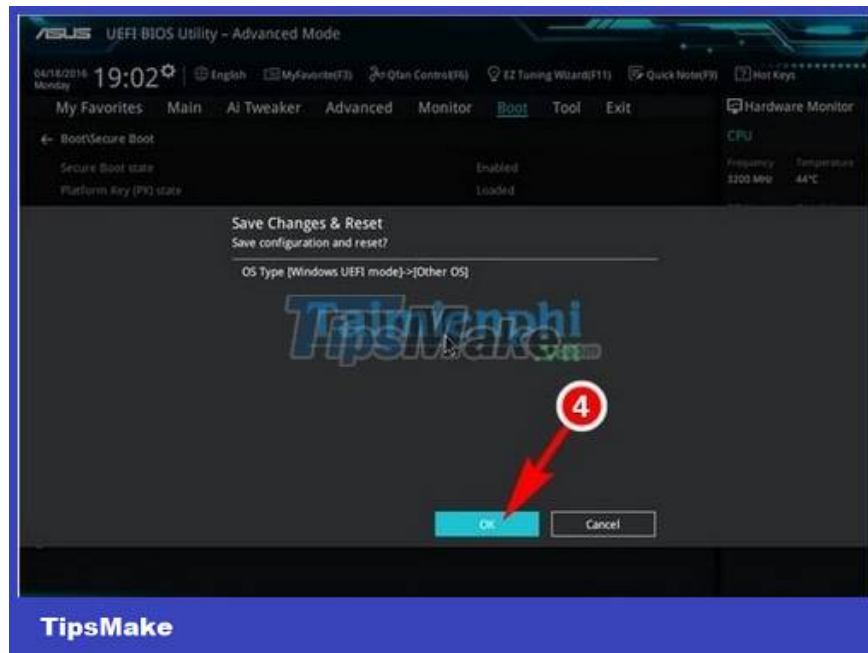

Select Advanced Mode > Boot > Secure Boot.

Step 2: In Secure Boot, go to OS Type and change UEFI mode to Other OS.

Step 3: Then press F10, the system will ask to save, click OK to confirm and restart the machine.

Step 4: Repeat the same step as step 1, when you say Secure Boot you see the line Platform Key(PK) state in Unloaded state. So we have solved the problem.
