3. 3 common errors on air conditioner remote and how to fix it

Gas temperature sensor

This sensor is mounted on the output side of the indoor unit to measure the gas temperature when returning to the compressor, the air conditioner only works normally when the temperature of the gas is within the allowable threshold. However, in case the sensor is broken, or the gas temperature to the compressor exceeds the permitted level, the sensor will order to stop operation to protect the air conditioner. The best solution is to call a mechanic to check and adjust the gas temperature accordingly.

The indoor unit is too dirty, it is clinging to the snow

Your family's air conditioner has been used for a long time but it is not cleaned or regularly maintained, making dirt cling to the indoor unit much, making the machine to snow shut is also the cause of self-regulation. Turn off. At that time, you just need to remove the mask of the indoor unit to check, if it has not been hygienic for a long time, this is the time you should do it right away. You can refer to the steps of cleaning the air conditioner in your home effectively so that you don't need to spend extra money to call a mechanic.

Air conditioners lack gas

Normally, air conditioner can be used for a long time without changing, but if there is a leak of pipes or connections (due to careful installation), the gas will be quickly lost. This greatly affects the operation of the air conditioner as the cooling effect is not good, the status of turning on the device for a while is interrupted continuously.

Therefore, if you have cleaned the air conditioner is finished but still have air conditioning errors are running automatically, then you call a worker to check the gas in the outdoor unit.

1. How to avoid being tricked into charging air conditioning

Air conditioner is overloaded

The hot summer days, the air conditioner must operate continuously with high capacity, so when the machine operates beyond the permitted level, the air conditioner will automatically disconnect to protect the compressor (block machine). To remedy this situation, you should re-arrange the outdoor unit of the air conditioner in a cool, shady location.

The above are some ways to help you fix the air conditioner at run time, if you have tried all the above methods and still cannot improve the situation, it is best to ask for support from warranty centers. Genuine or reputable repair units to check.
