

# Fix the error of missing Snipping Tool in Windows 10, 11 quickly and effectively

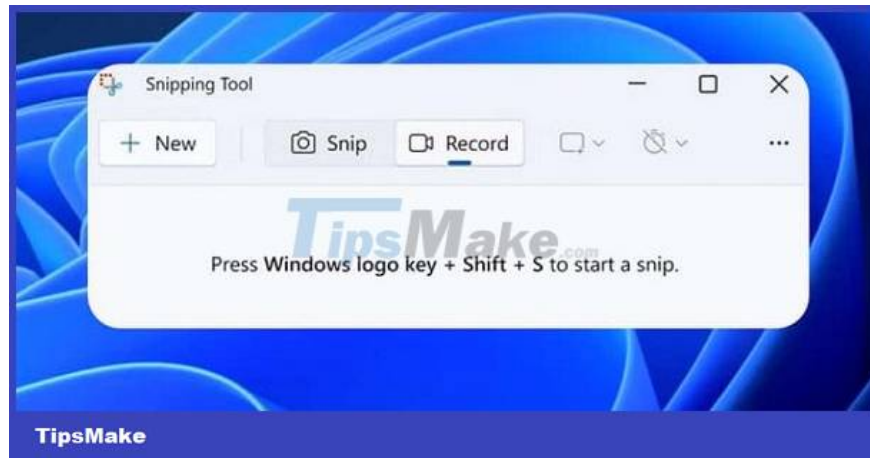

Fixing the error of missing Snipping Tool in Windows 10 and 11 is a trick shared by TipsMake in today's article.

Fixing the error of missing Snipping Tool in Windows 10 and 11 is a trick shared by TipsMake in today's article. If you discover that your Windows is missing this tool, find out immediately!

Snipping Tool is a very popular screen capture tool among Windows users. This is an application developed by Microsoft, very simple and easy to implement. Comes with many useful features to help you take screenshots and edit photos quickly afterward.

Although it is a default tool on the Windows 10 operating system, during use, some users discovered that their devices had lost the Snipping Tool. TipsMake's following guide to fix missing Snipping Tool error in Windows 10 and 11 will help you fix this problem.

## Details on how to fix the error of missing Snipping Tool in Windows 10, 11 simply

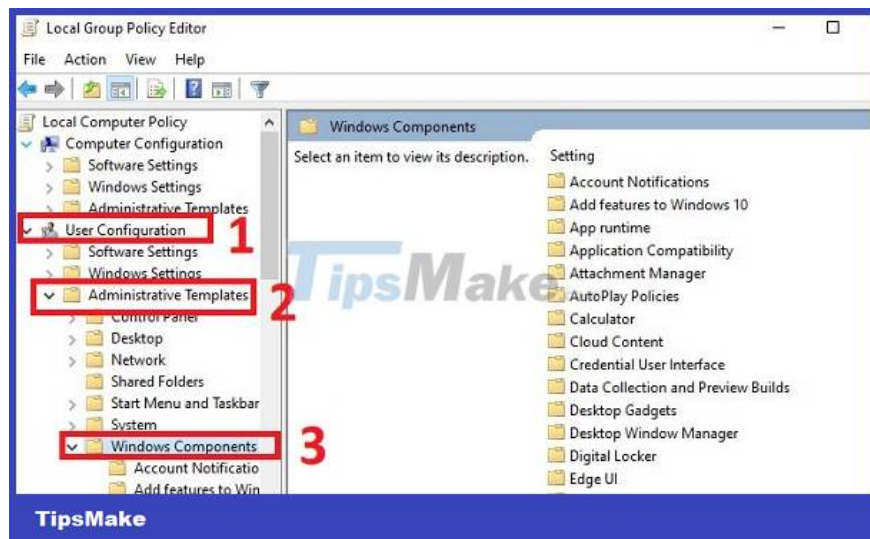

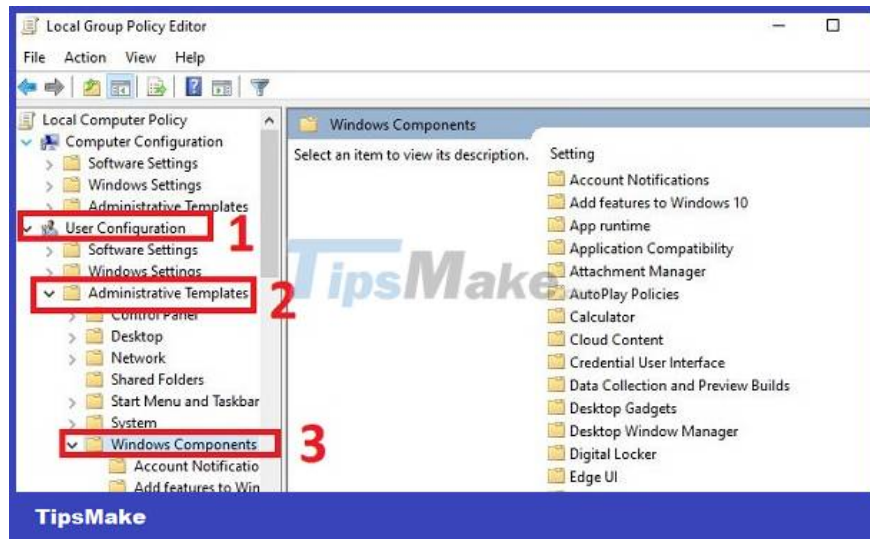

Although Snipping Tool is a default tool in Windows. However, users can completely remove this application from the device. Therefore, this may be the reason the Snipping Tool is lost on your computer. But don't worry too much, because re downloading this tool is very easy and fast.

To reinstall Snipping Tool for Windows 11 and Windows 10, there are two ways. Admin will guide on Windows 10 and those using Win 11 do the same but the interface will be a little different! Depending on you, apply the most suitable loading method.

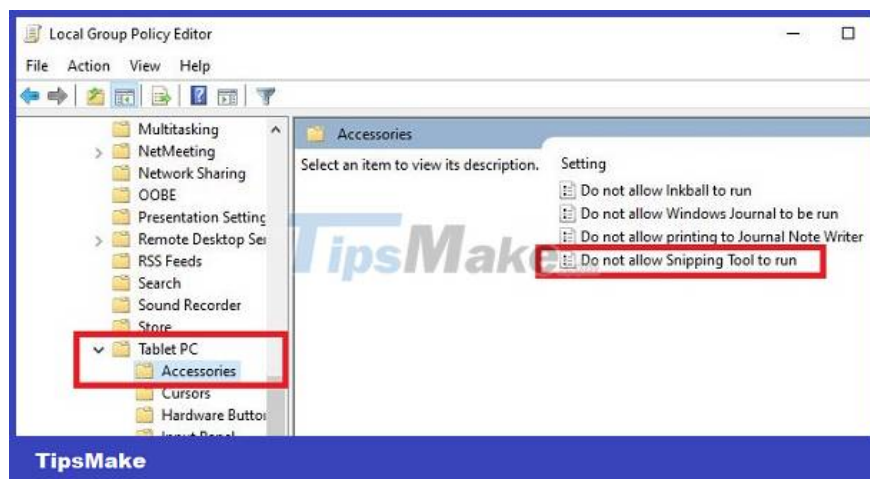

### 1/ Enable Snipping Tool via Group Policy (In case Snipping Tool is disabled)

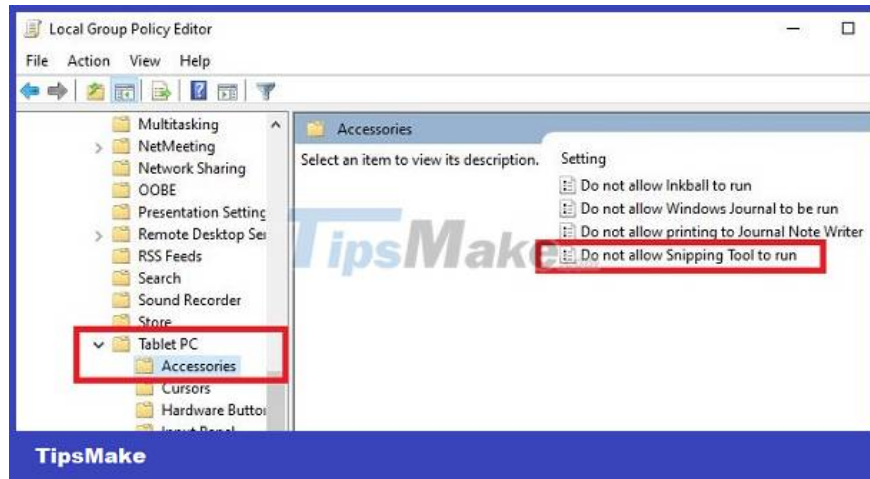

To bring the Snipping Tool back, you can edit Group Policy. The steps are as follows:

1. Step 1: First, you need to open the Group Policy editor by pressing the Windows + R key combination > Enter gpedit.msc in the Open box and click OK or press Enter.
2. Step 2: At the Local Group Policy Editor interface, select User Configuration > Select Administrative Templates > Then expand the Windows Components folder.

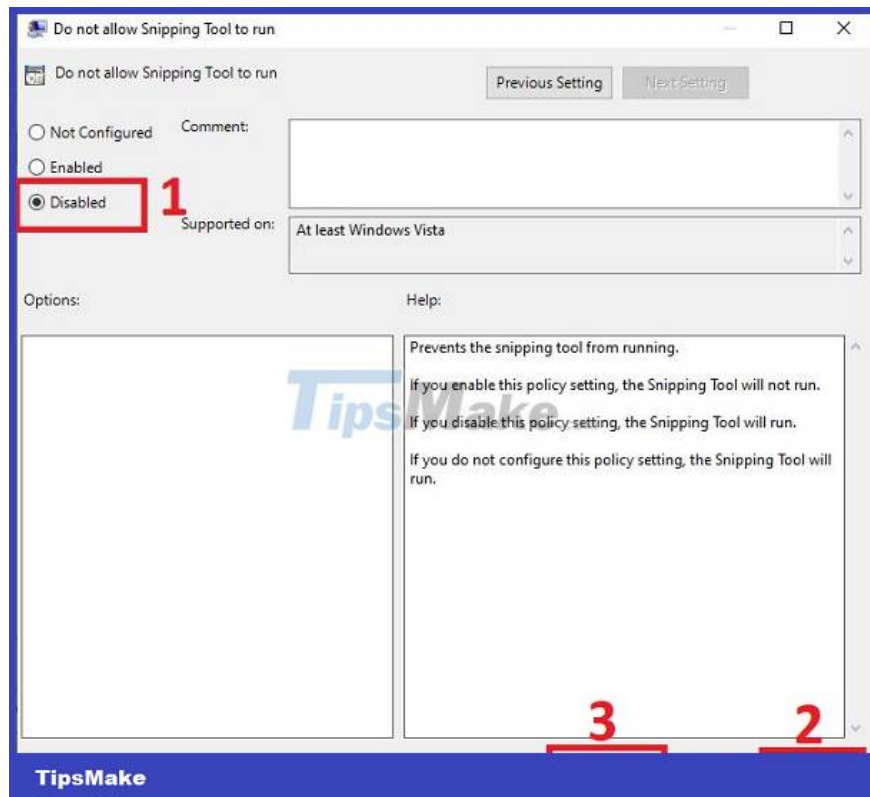

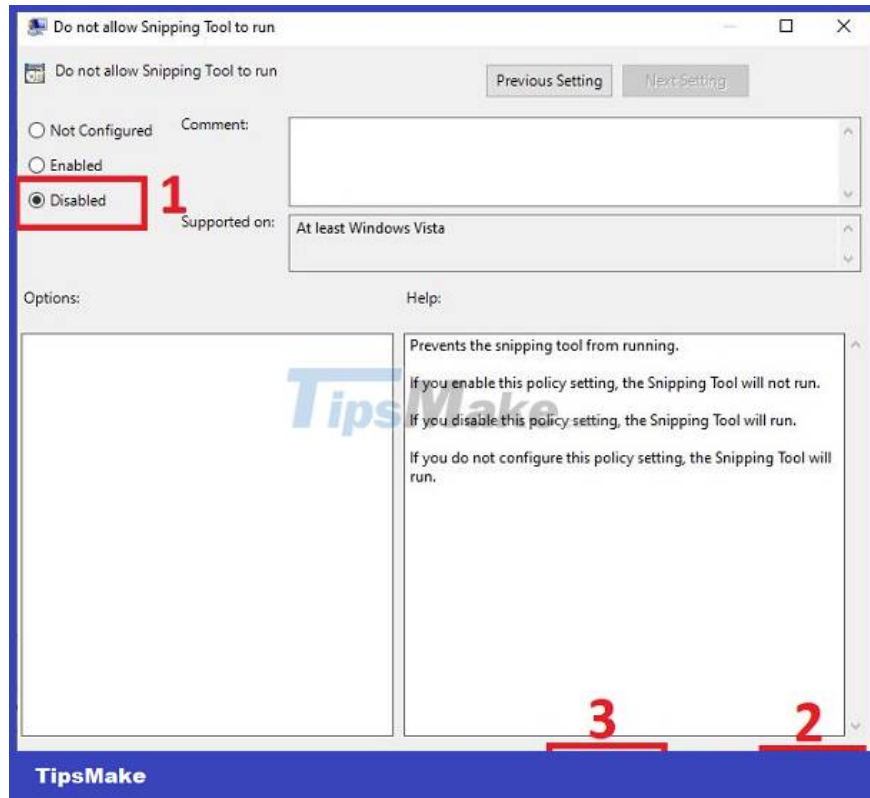

1. B3: Scroll down and continue to double-click to expand the Tablet PC folder > Then, click Accessories > Looking through the right pane, double-click 'Do not allow Snipping Tool to run'.

1. Step 4: In the displayed window, tick Disabled > Click Apply and click OK to save the changes.

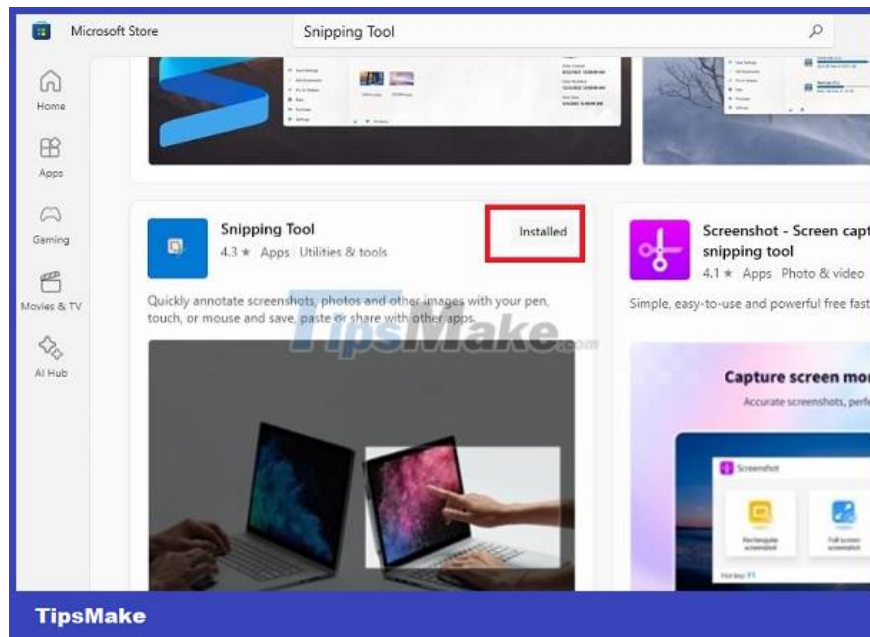

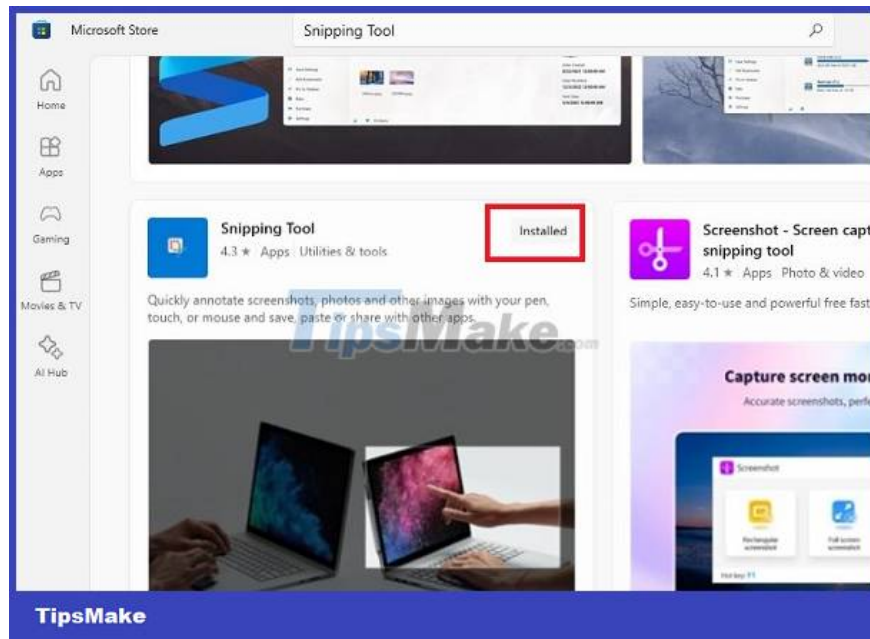

After completing the above steps, close the Group Policy window and check to see if the Snipping Tool has returned. If not, proceed with the following method.

## **2/ Download the Snipping Tool application from Microsoft Store (In case the software has been removed)**

If Snipping Tool has been completely removed from your device, the above method may not be applicable. Therefore, the only way is to redownload the Snipping Tool from the Microsoft Store. To reinstall is not difficult, do the following:

1. Step 1: Users launch Microsoft Store on their Windows > Then, in the search box, enter the keyword Snipping Tool and press Enter.
2. Step 2: Click Install or in some interfaces click Get to start the installation process and wait for the process to complete.

## How to display the Snipping Tool?

After installing, you suddenly forgot how to quickly open this cutting tool? Just press the key combination WinKey + Shift + S and this cutting tool will appear to help you take screenshots quickly. Don't forget to take advantage of Snipping Tool's built-in photo editing and quick photo sharing tools to maximize the benefits according to your needs!

Above are details on how to fix the error of losing Snipping Tool in Windows 10 and 11. Hope you can get this tool back according to my instructions.
