

Fix the error of not being able to access Task Manager and Regedit

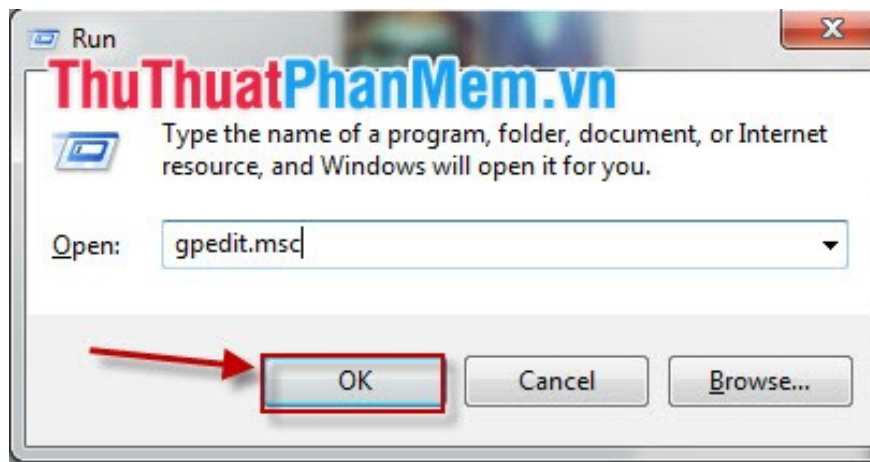

Fix errors in Task Manager and Regedit - Sometimes you can't get to Task Manager and Regedit caused by a virus. Accompanying it when you go to Regedit is the message 'Regedit has been disabled by administrator', temporarily understood that Regedit has been blocked.

Sometimes you can't get to the Task Manager and Regedit caused by a virus. Also, when you go to Regedit, you will receive the message " **Regedit has been disabled by administrator** ", temporarily understood that Regedit has been blocked by the administrator. To fix this problem quickly, you need to conduct a virus scan, if you can not detect the virus, you should check that your computer is accessing as an administrator. If still not satisfactory, you can follow these steps:

Step 1: On the **Run** by clicking **Start** -> type *shaking* the box *Search programs and files* and then select **Run** (or use the key combination **Windows + R**).

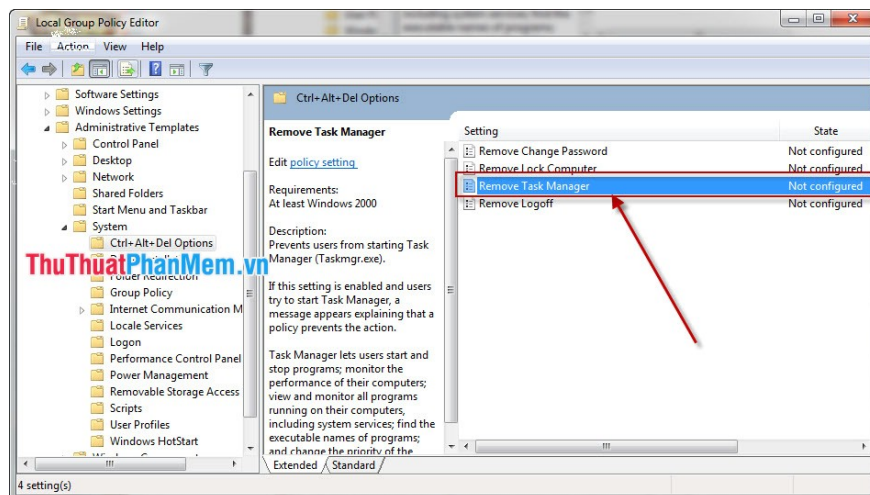

The **Run** dialog box opens, enter the command *gpedit.msc* into the **Open** section . Then select **OK** or press the **Enter** key .

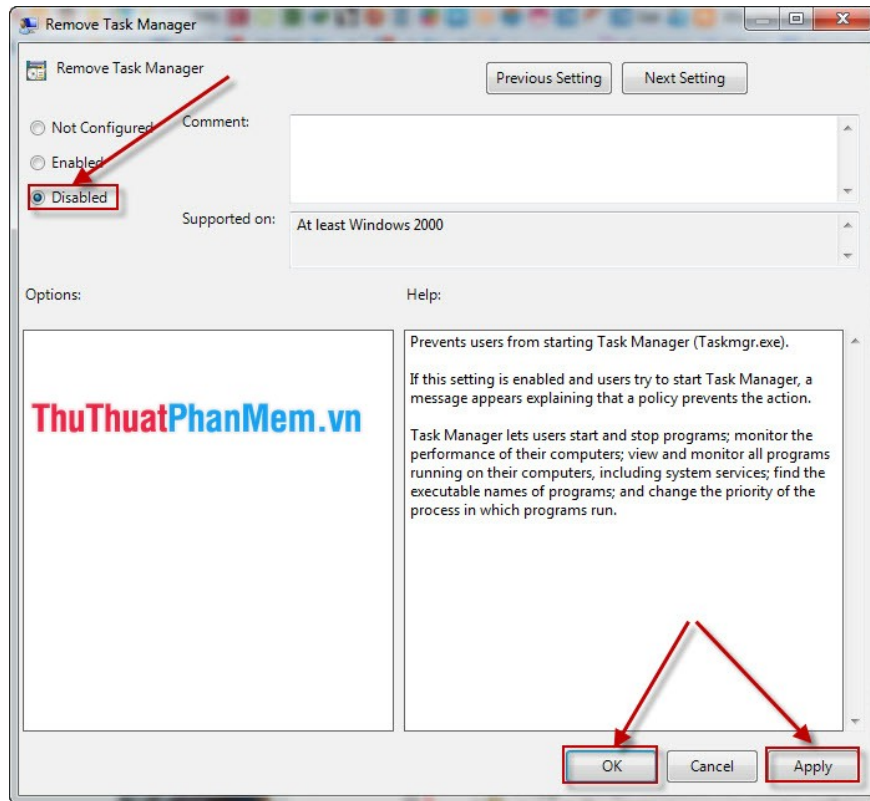

Step 2: Local Group Policy Editor window appears as shown below:

1. Turn on Task Manager.

You search in the order **User Configuration -> Administrative Templates -> System -> Ctrl + Alt + Del Options** . Then double-click **Remove Task Manager** on the right side of the window in the **Settings** section .

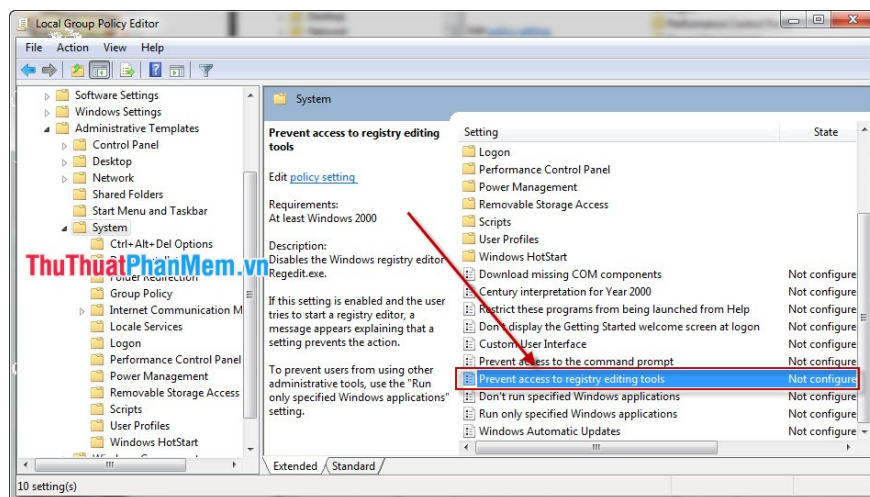

The **Remove Task Manager** dialog box opens, click **Disabled** as shown below then click **OK** or **Apply** to complete the settings.

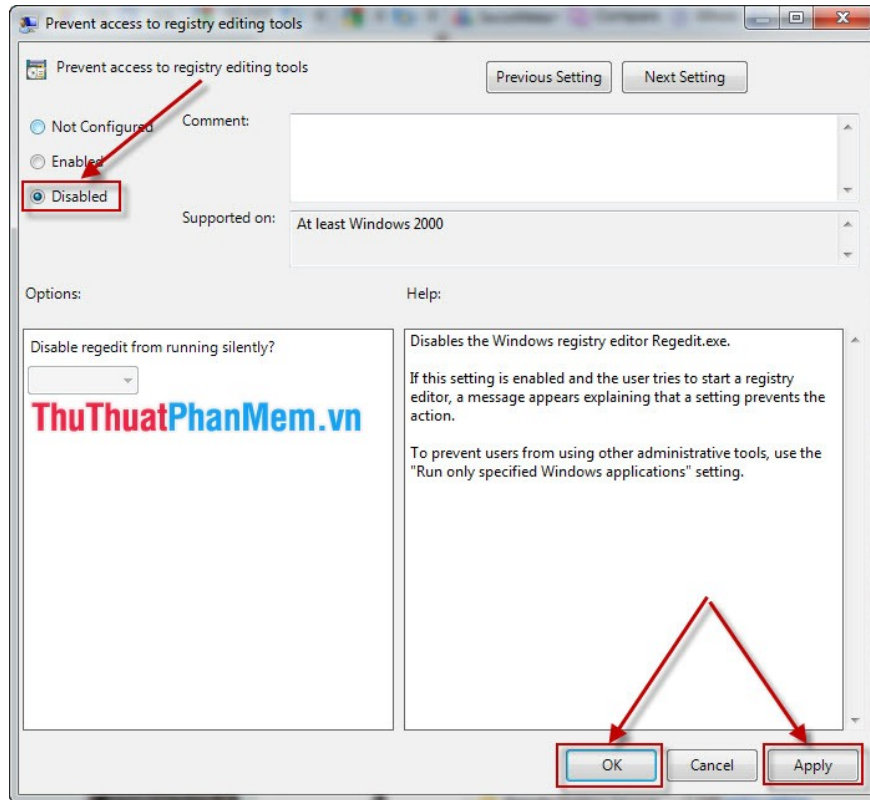

2. Go to Regedit.

You access the **System32** folder under the path *C: WindowsSystem32* find whether you see 2 files *regedit.exe* and *regedit.com* . If so, simply rename the file *regedit.com* to *regedit.old* and you 're done.

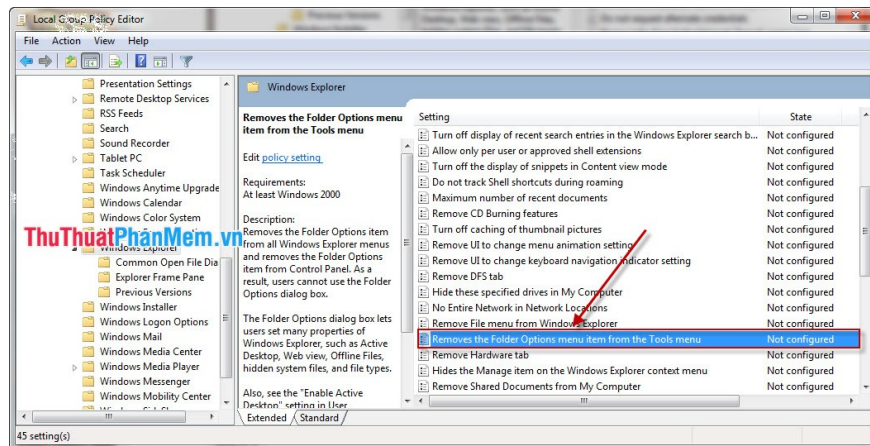

If not, open the **Local Group Policy Editor** window and look for it in the following order: **User Configuration** -> **Administrative Templates** -> **System** . Look to the right of the **Local Group Policy Editor** window and double-click *Prevent access to registry editing tools* .

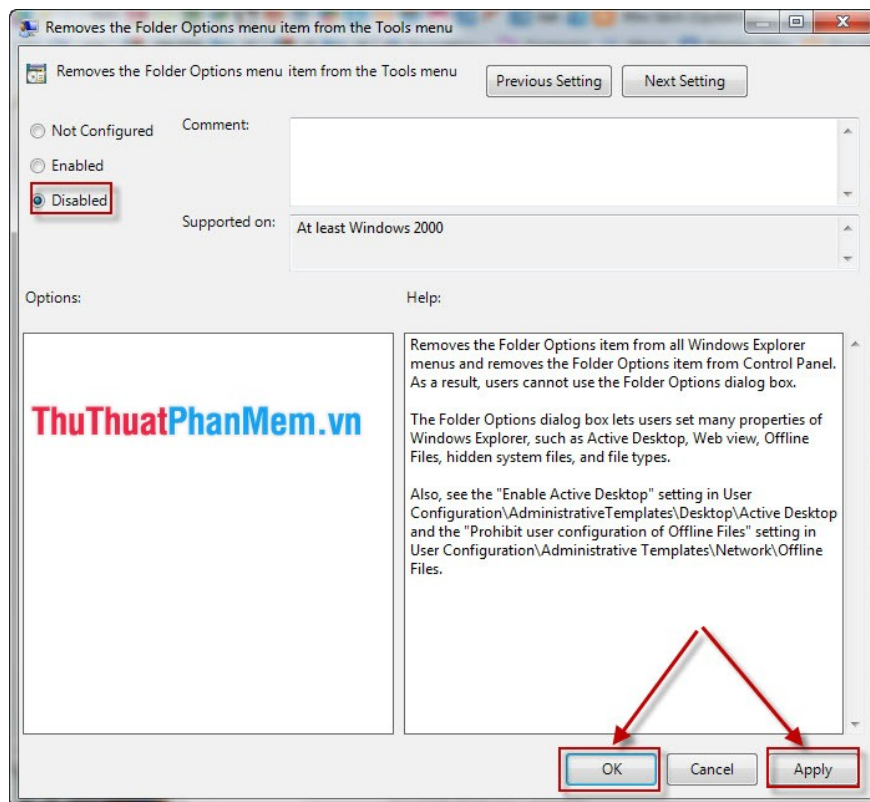

Prevent access to registry editing tools window appears, click **Disabled** then click **OK** or **Apply** to complete the setup.

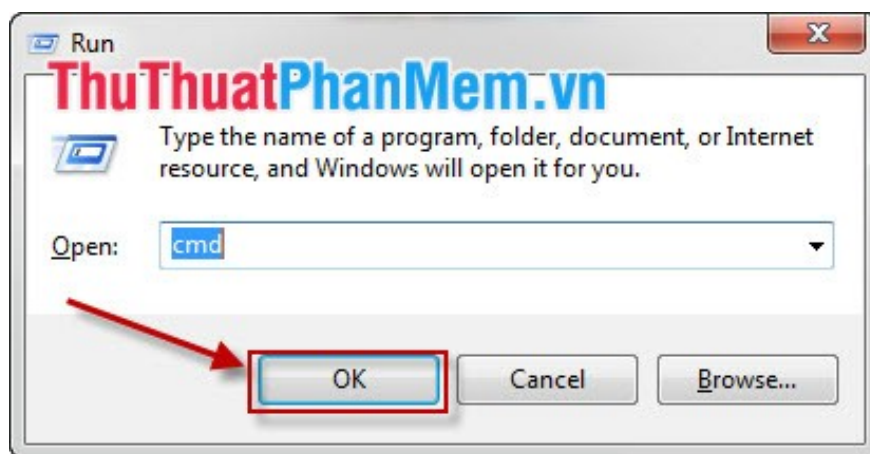

Next, look for **User Configuration -> Administrative Templates -> Windows Components -> Windows Explorer** double-click **Removes the Folder Options menu item from the Tools menu**.

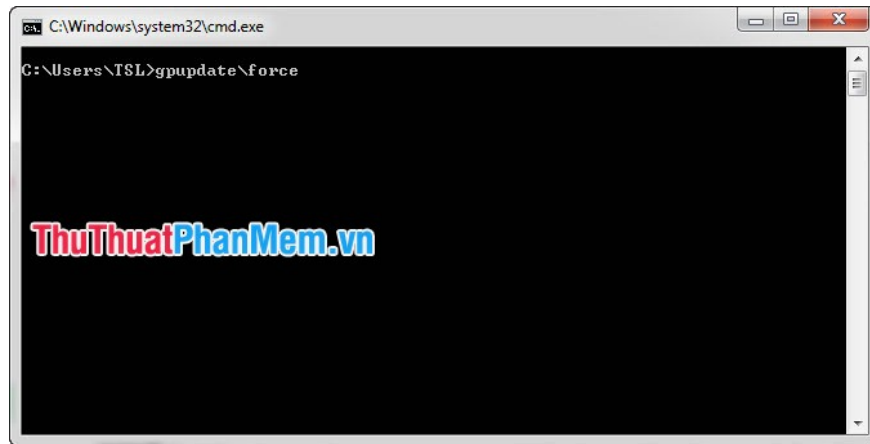

The **Removes the Folder Options menu item from the Tools menu** opens, click **Disabled** and then click **OK** or **Apply** to complete the setup. The purpose of this is to expose virus folders.

Step 3: Go to **Run**, type `cmd` in the **Open** section, then click **OK** or press the **Enter** key .

Next in the `cmd` window you enter the command `gpupdate /force` and press **Enter** to complete the update.

If through the above steps and you still can not access the Task Manager and Regedit, it is best to Ghost or reinstall Windows. Good luck!
