

# Fix the error of not being able to use the F4 key in Excel with shortcut keys

If the F4 key is not working in Excel, follow the instructions below for quick and easy fixes.

The F4 key not working in Excel can make it difficult for you to work. With the simple operations from the Excel shortcut keys that Free Download shares below, you will definitely fix this error quickly and effectively.

## *How to fix the error of not being able to use the F4 key in Excel*

To fix the simplest error, you just need to **press the Fn key when you need to use the F4 key**, then it will be returned to its normal function instead of being used as a quick shortcut key for computer functions such as increasing/decreasing volume, increasing/decreasing screen brightness,.

If you want the F1-F12 function keys to return to their original function as on regular separate keyboards, turn the Fn function key on and off on your laptop.

Above is a guide to help you fix the error of not being able to use the F4 key in Excel, solving the problem not only for you but also for laptop users who encounter the problem of not being able to use the correct functions of the F1-F12 key sequence.

Excel is similar to Word documents, you can print data on Excel onto different types of paper, the way to print on Excel is similar to the way to print on Word, if you do not know how to do it, please refer to the way to print Excel that we have instructed. Wish you success!

Good luck!
