

Fix the error of not installing the .NET Framework 3.5 on Windows

Microsoft .NET Framework is a set of programming platforms that can be installed or already available in Windows operating systems. Due to some cases, your computer cannot install this software. So follow the fix in the article below.

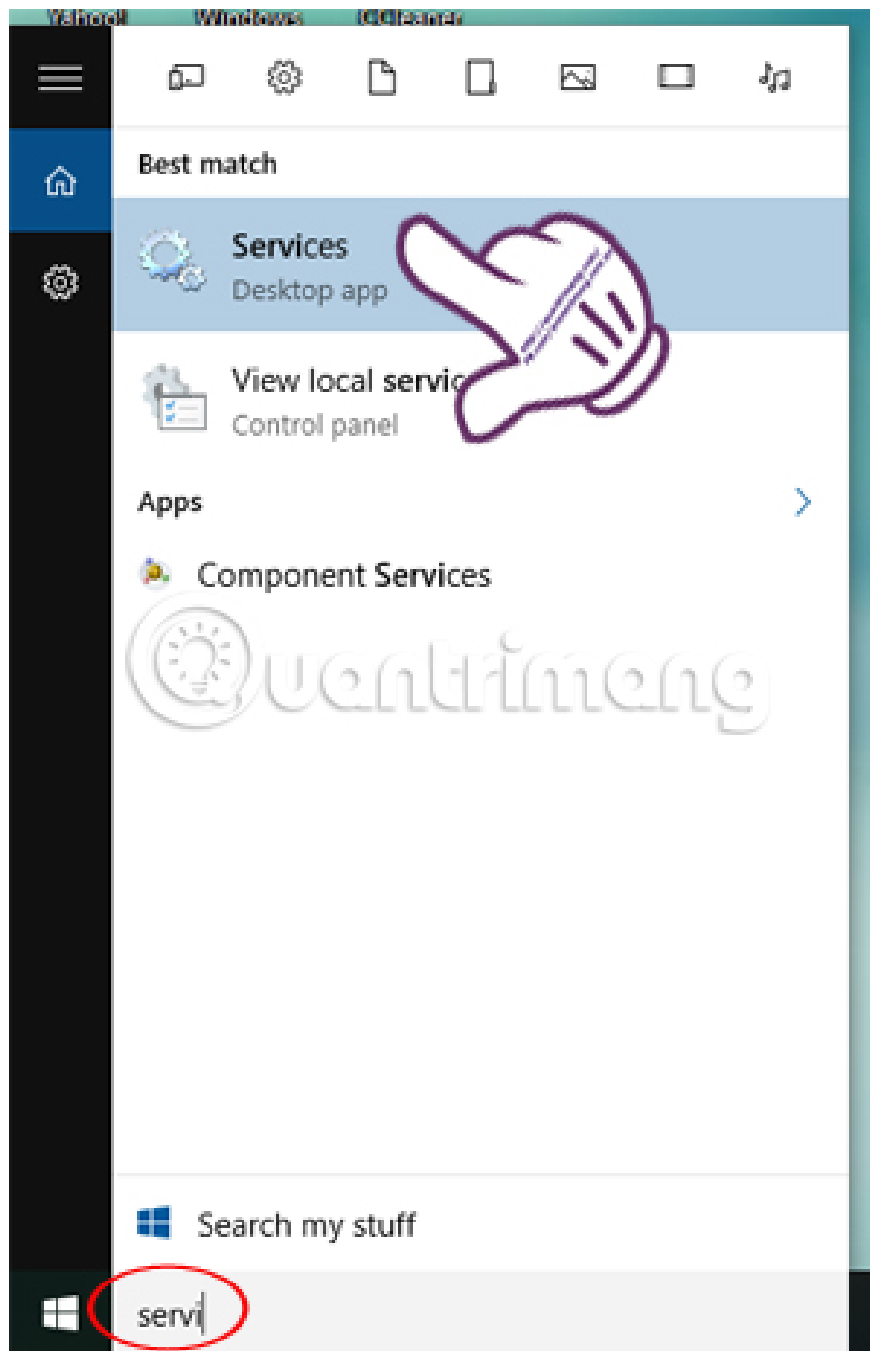

Microsoft .NET Framework is a set of programming platforms that can be installed or already available in Windows operating systems. Depending on your needs, your computer must install the .NET Framework. However, for machines from Windows 8 and above, especially Windows 10, there is a problem installing the .NET Framework 3.5.

In this article, Network Administrator will guide you step by step fix the error of not installing .NET Framework 3.5 on the computer

1. Download the .NET Framework version 3.5
2. Download the latest version of .NET Framework

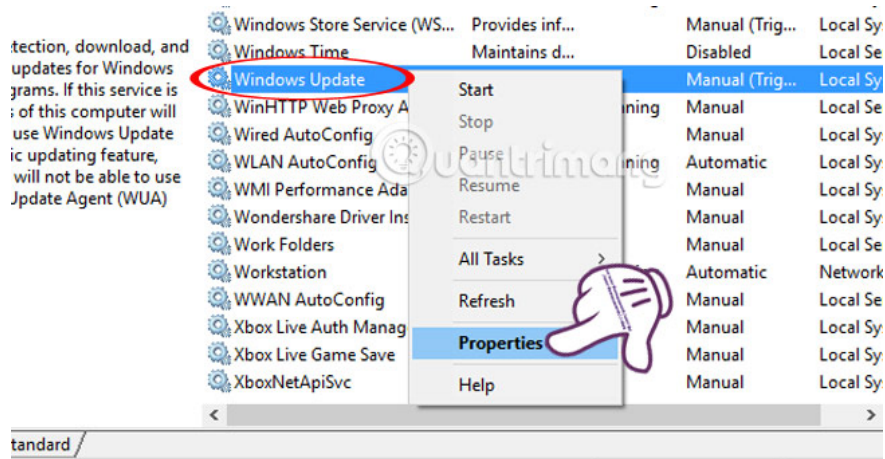

Step 1:

You completely exit the program on your computer. Then in Windows' search bar, enter the Search keyword and access the found results.

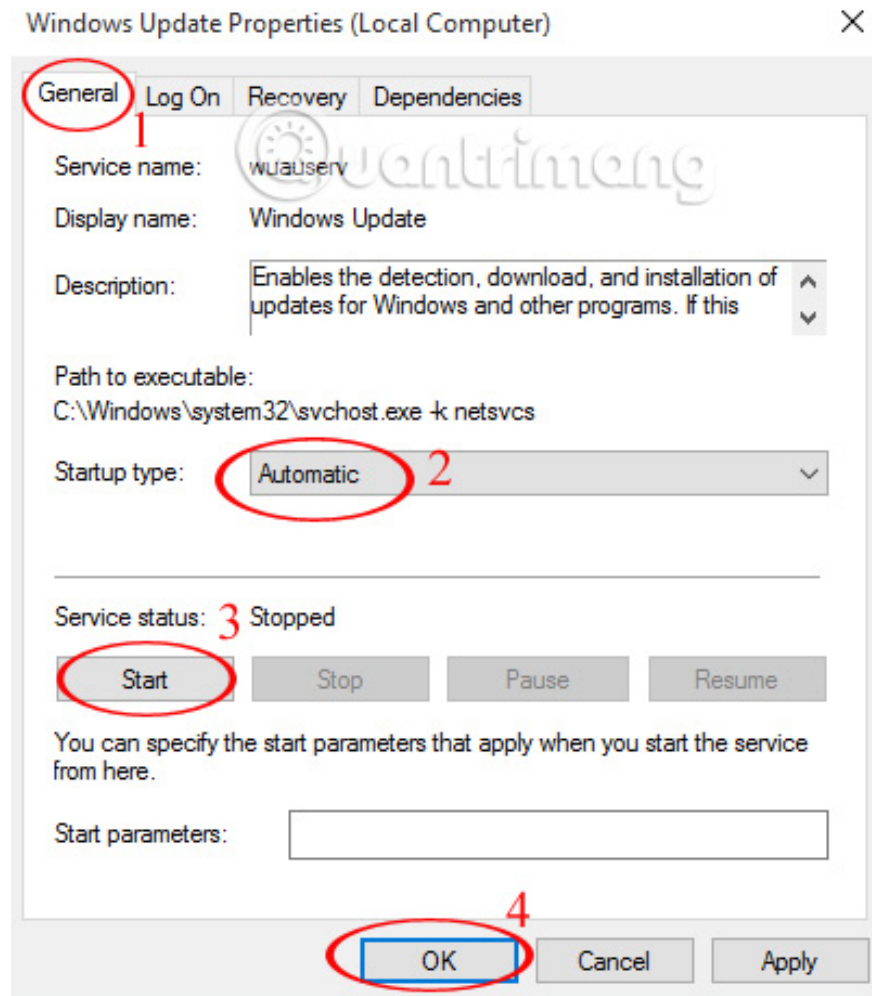

Step 2:

In the Services interface, you find and right-click the **Windows update** item and select **Properties** .

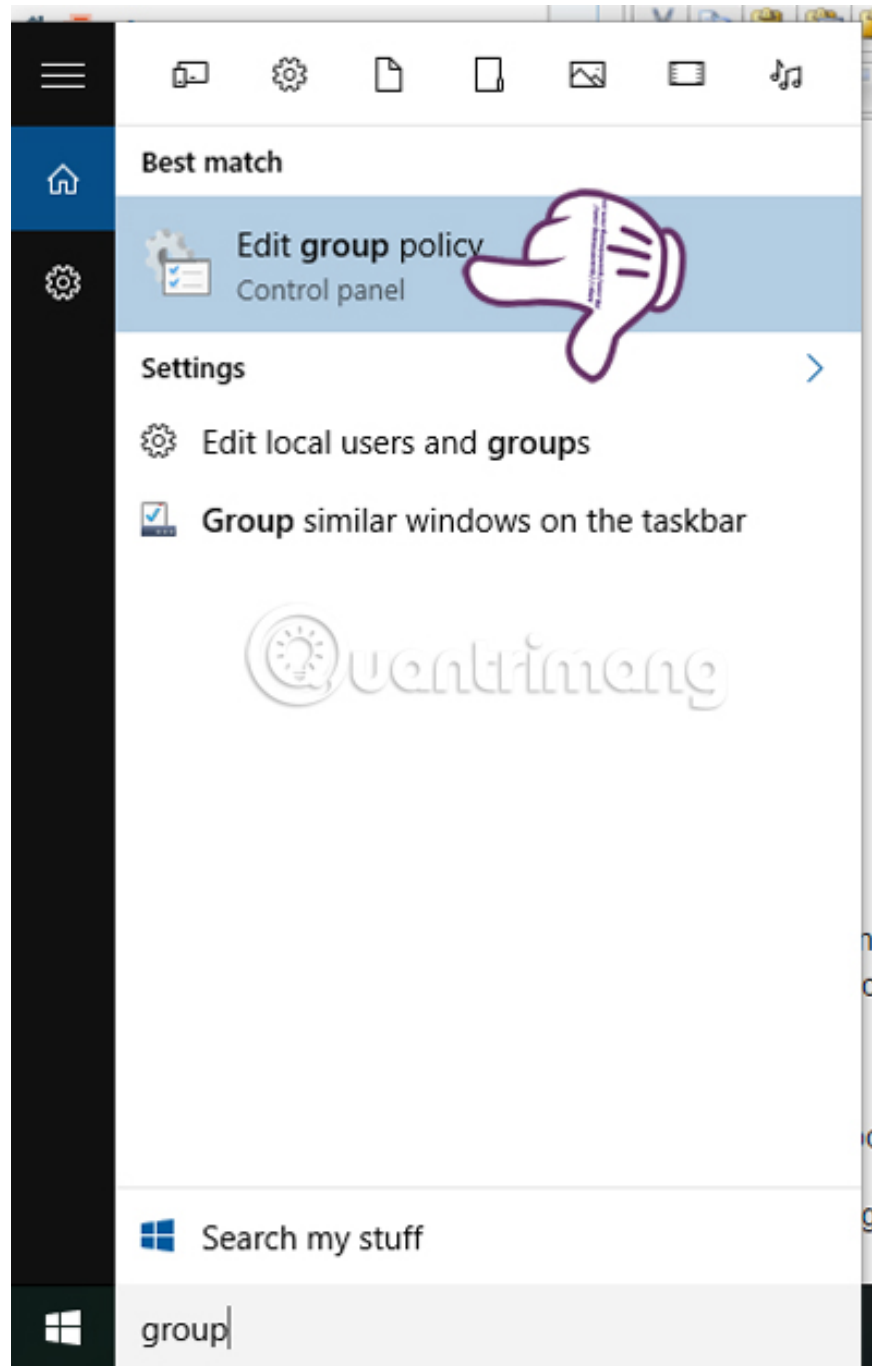

Step 3:

A new window appears. Here, we select the **General** tab and select the **Startup type** item to **Automatic** then press **Start** and **OK** to finish.

Step 4:

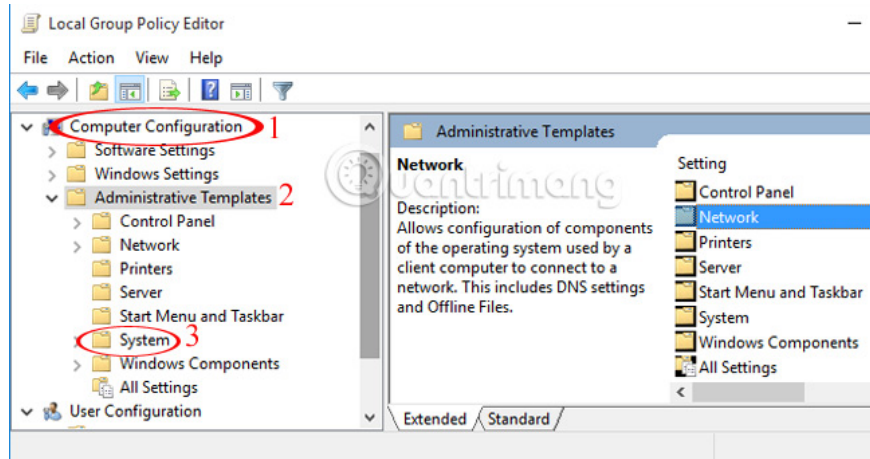

Back in Windows search bar, enter the **group** keyword and click on the result above. Or use the keyword **gpedit.msc** and also click on the search results.

Step 5:

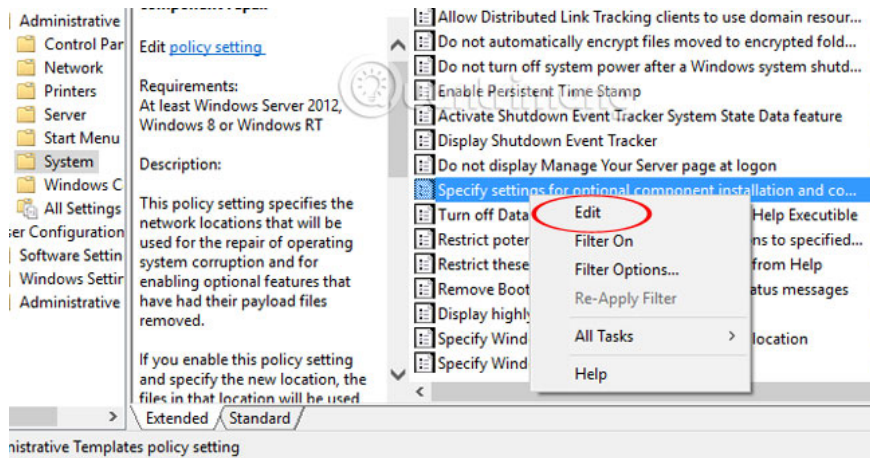

At the **Local Group Policy Editor interface** , we search by following the directory path:

Computer Configuration> Administrative Templates> System .

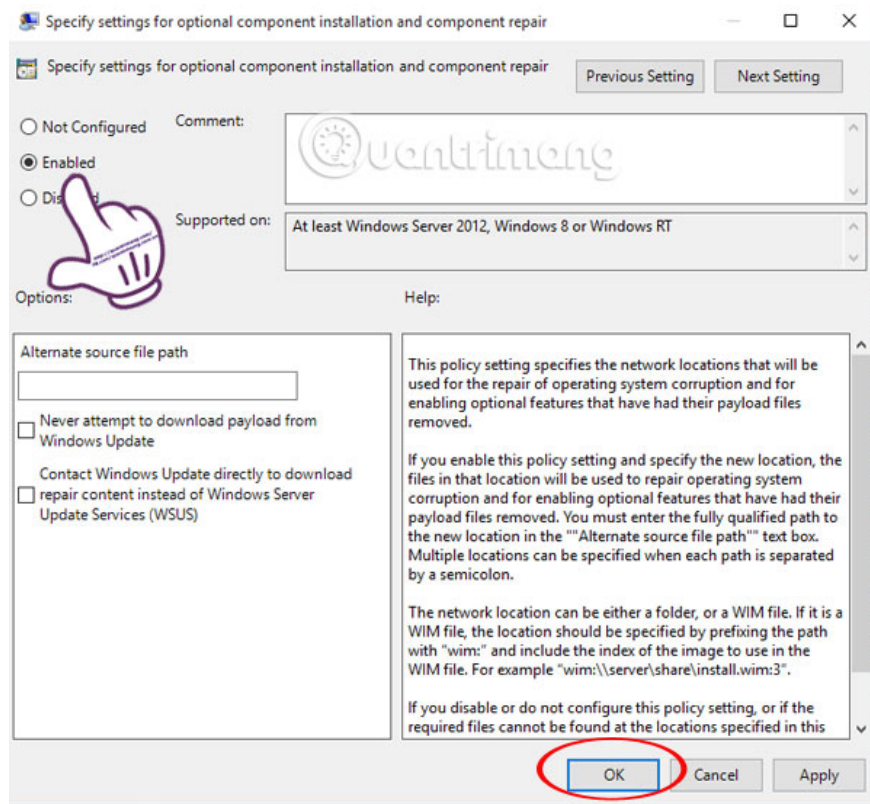

Step 6:

Double click on System. Then, at the interface on the right you find the **Specify settings for the component installation and component repair options** . We right-click and select **Edit** .

Step 7:

Here, you **tick the Enabled** box and click **OK** to save.

Finally, restart the computer and try installing the program again.
