Follow up now if you are also 'suffering trouble' because of this situation!

## **Undoing changes made to your computer, what is the situation like?**

Before getting to how to fix the error, let's find out what Undoing changes made to your computer means. If you want to fix the error, this is important information that you need to understand.

Specifically, Undoing changes made to your computer means '**undo the changes made on your computer**'. When the computer has an error undoing changes made to your computer, it will hang on the boot screen. You can easily identify the error because the vast majority of cases will be similar to the illustration above.

### **Causes of computer crashes Undoing changes made to your computer**

Like other computer errors, there are many factors that can cause the Undoing changes made to your computer error. The most common cause is due to problems with the system files on the computer. Or it could also be because the computer does not have enough capacity to update the system and causes the update process to be interrupted.

## Ways to fix Undoing changes made to your computer error Windows 10, 11

This is an extremely annoying error and it will cause your computer to constantly freeze at the boot screen. Below are a few ways for you to handle the error Undoing changes made to your computer Windows 11, 10.

### 1: Start safe mode

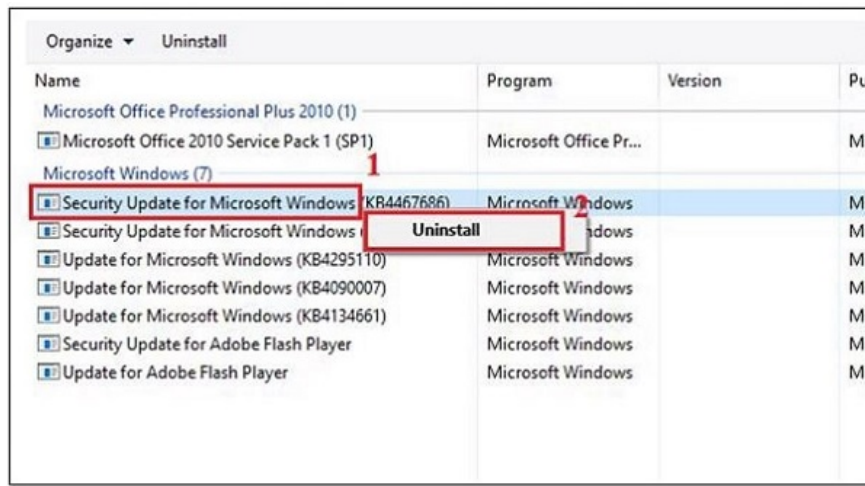

In cases where the computer has an error at the boot screen. Accessing safe mode to fix the error seems to be the most feasible. To enter safe mode on your computer, you can continuously press the **F8** or **Shift + F8** key when starting the computer. Also, if the previous method doesn't work, you can start the device, then press the power

off button. Do this several times continuously and the computer will automatically enter safe mode.

## 2: Delete recent updates on your computer

Once you're in safe mode, you can try deleting recent updates on your computer. This operation is very simple but also extremely effective when you want to handle the Undoing changes made to your computer error.

1. **Step 1** : Press **Windows + R** , then enter **appwiz.cpl** in the space and press **enter** .
2. **Step 2** : To display a list of recent updates, select **View installed updates** .
3. **Step 3** : Right-click on the most recent update and select **Uninstall** to delete.
4. **Step 4** : After removing the updates, you can restart the computer.

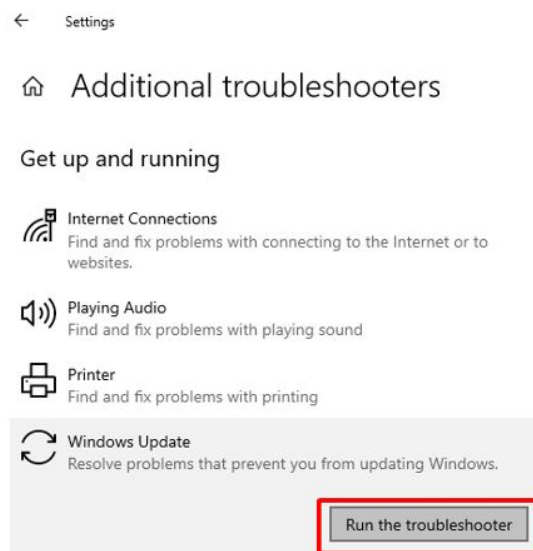

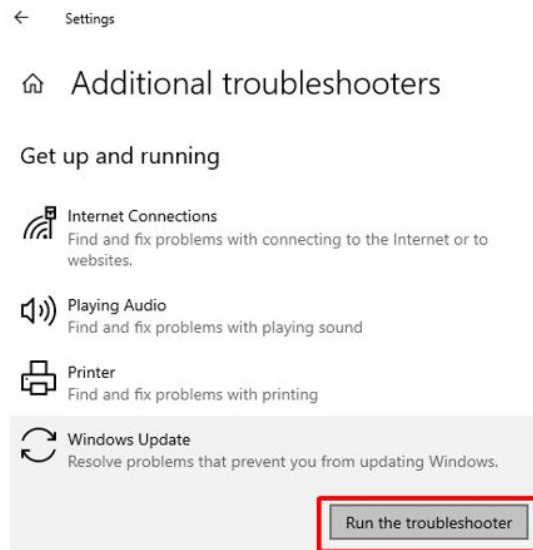

## 3: Launch Windows Troubleshooter

Most cases of Undoing changes made to your computer errors will be fixed using the methods above. But if you've tried but it doesn't work, you can also launch the Windows Troubleshooter.

1. **Step 1** : Enter **troubleshoot settings** into search on your computer and **enter** .
2. **Step 2** : Click on **Additional troubleshooters** and then go to the next step.

3. **Step 3** : Select **Windows update** and press **Run the troubleshooter** . Wait for the process to complete then restart your computer.

## 4: Reinstall Windows

Finally, after trying everything but still can't fix the Undoing changes made to your computer error. Now try checking and reinstalling Windows on your computer. This method may take a little time, but the effectiveness can be almost absolute.

**And above is some information related to the error Undoing changes made to your computer that cannot be turned on. Hope you can quickly fix the error with the information I have provided above.**
