

# Fix USB errors that cannot copy files larger than 4GB

You are trying to copy a file larger than 4GB to a USB drive or to a hard drive partition and the File error is too large for the file system destination. If you encounter this situation and do not know how to handle it, please refer to the instructions below of TipsMake.com.

You are trying to copy a file larger than 4GB to a USB drive or to a hard drive partition and encounter the "**The file is too large for the file system destination**". If you encounter this situation and do not know how to handle it, please refer to the instructions below of TipsMake.com.

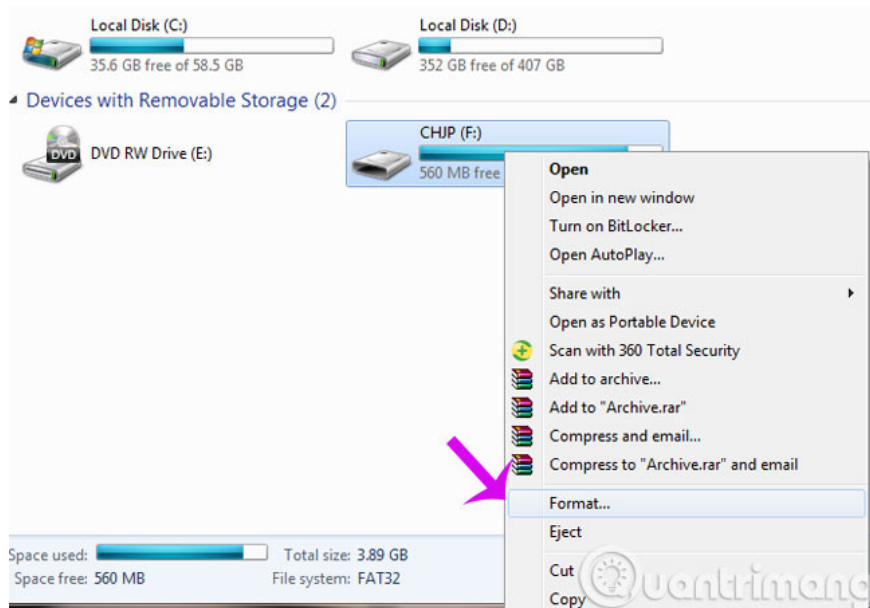

1. Safe ways to withdraw USB
2. Keep your computer safe when attaching USB
3. How will Safely Remove harm the device?

First, let's find out the cause of this announcement. This is an error because your USB or external hard drive is using **FAT32** format. This **FAT32** format only allows you to copy or cut files that are smaller than **4GB** .

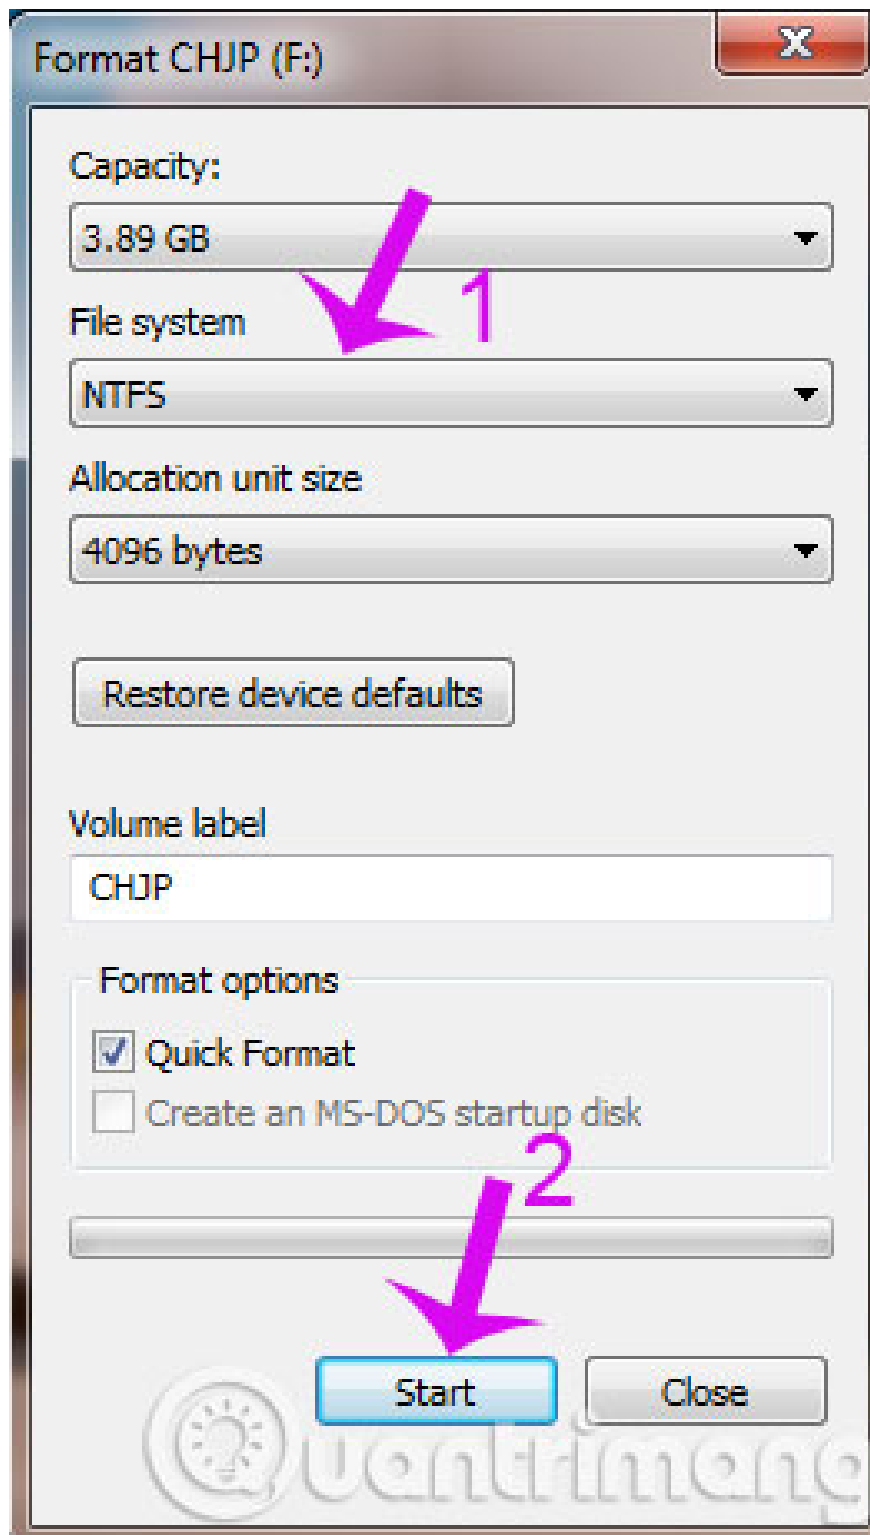

Therefore, to fix this error you only need to format ( *Format* ) USB, partition ( D, E, F, . ) or external hard drive to **NTFS** format. Here, we guide the case of USB, with the hard drive, you do the same.

**Step 1** : You right-click the USB drive you want to change to **NTFS** then select **Format**

**Step 2 :** In the **File system** section , select **NTFS** and click **Start** to Format.

**Note :** This will erase all data in the USB so before proceeding Format, you should save important data to the hard drive.

You wait a moment for the system to proceed with Format (the time depends on the amount of data in the USB).

So you have finished formatting from **FAT32** to **NTFS** . Please copy or cut the file larger than 4GB into the USB try it.

**I wish you a happy holiday!**
