

# Fixing the 'Taskbar not found' error when browsing the web.

The taskbar, or taskbar, contains icons for currently running programs. It can be frustrating when you open a program, especially a web browser, and the taskbar is nowhere to be seen. Fixing the 'taskbar not found' error when browsing the web will be the topic we address today.

## Ask:

Hello TipsMake. My computer is working normally, but I'm currently experiencing a problem that I can't fix: the taskbar appears normally on the desktop, but it disappears when I'm browsing the web. I haven't selected full-screen mode when browsing. Can Taimienphi help me resolve this issue?

## Reply:

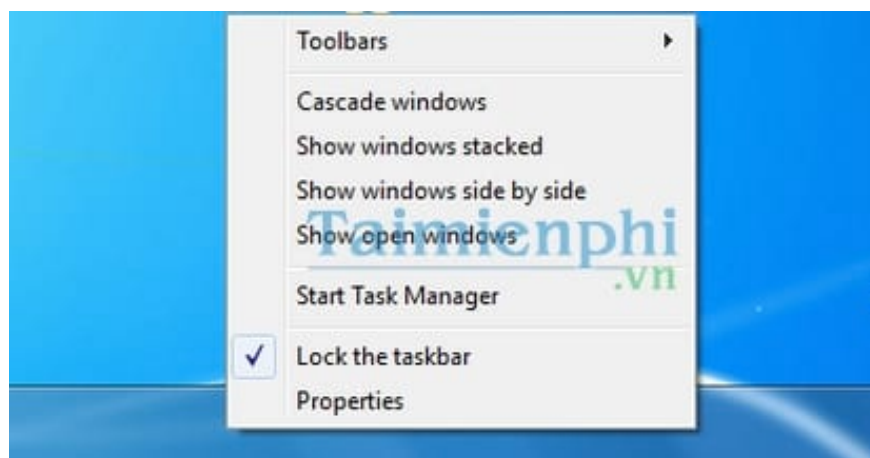

Hello [email protected] from Taimienphi.vn . Thank you for sending your question and concerns to TipsMake's mailbox. Regarding your question, Taimienphi would like to offer the following solutions:

### Method 1: Restart your computer.

It may sound simple, but sometimes this method can easily solve seemingly difficult problems. For some reason, such as minor software conflicts, your browser might overflow and cause an error where the Taskbar isn't found while browsing. If you can't fix it, try the second method below.

### Method 2: Turn off the automatic Taskbar hiding feature.

*Step 1:* On your computer screen, right-click on the Taskbar and select **Properties** .

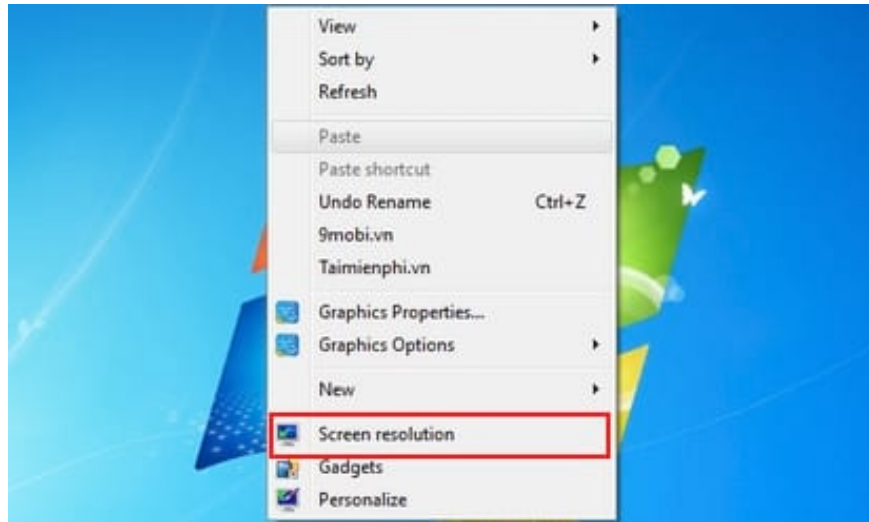

*Step 2:* The Taskbar and Start Menu Properties dialog box will appear. Uncheck the box next to **Auto-hide the taskbar** and then click **OK**.

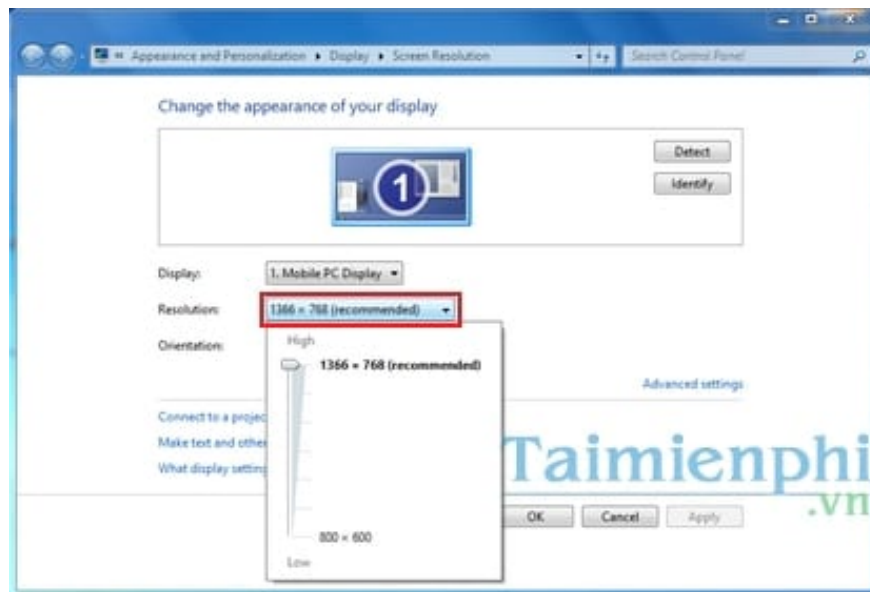

Method 3: It's possible you've connected your computer to another device like a TV or projector, causing the computer to automatically set the resolution to that screen. Therefore, please follow these steps to reset the resolution:

*Step 1:* From the Desktop screen, right-click and select **Screen Resolution**.

*Step 2:* The Screen Resolution interface will appear. In the **Resolution** section, select the recommended resolution as shown below, then click **Apply > OK**.

Thus, with the 3 methods Taimienphi has guided you through above, hopefully you will be able to fix the issue of not finding the taskbar when browsing the web. Additionally, Chrome, a Google web browser widely used today, often experiences minor errors such as not displaying when minimized to the taskbar. To resolve this issue, you can refer to the supplementary article on how to fix the **Chrome taskbar not displaying error when minimized to the taskbar**, introduced in the previous article.
