

# FlexPai, the first folding screen smartphone in the world officially launched, equipped with Snapdragon 8150 chip

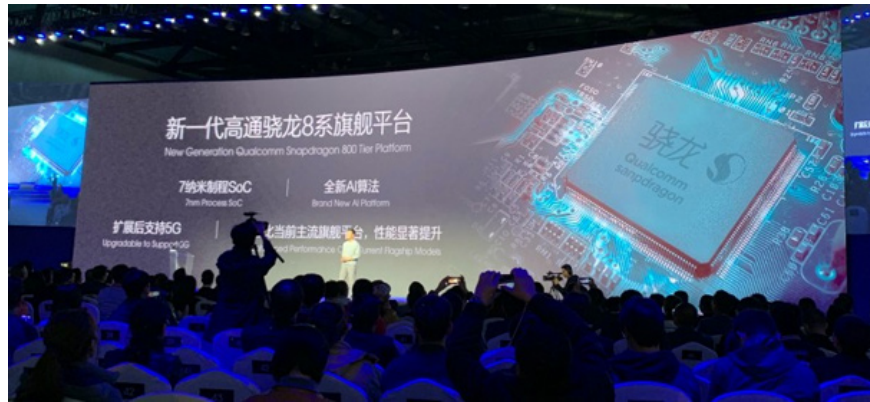

Today, the manufacturer Royu Technology has launched a folding screen mobile device called FlexPai. This mobile device can be 'scaled down' from 7.8 inches to just 4 inches after folding, so you can consider the FlexPai as a tablet or smartphone.

Today, the manufacturer Royu Technology has launched a folding screen mobile device called FlexPai. This mobile device can be "scaled down" from 7.8 inches to just 4 inches after folding, so you can consider the FlexPai as a tablet or smartphone.

When the smartphone is folded into two screens, a screen displays the interface of the application's activities while the remaining screen displays the device's wallpaper.

The configuration of this folding screen smartphone is 6GB of RAM, 128 GB of memory, 7nm Snapdragon chip and currently only one of Qualcomm's most powerful Snapdragon 8150 chips is manufactured on 7nm process. In addition, FlexPai also has versions of 8 GB RAM and 256 GB memory or 512 GB.

FlexPai is equipped with AMOLED screen, dual 16 MP camera and 20MP. FlexPai has a thickness of about 7.6mm, so when folded, its thickness can be up to 15.2mm.

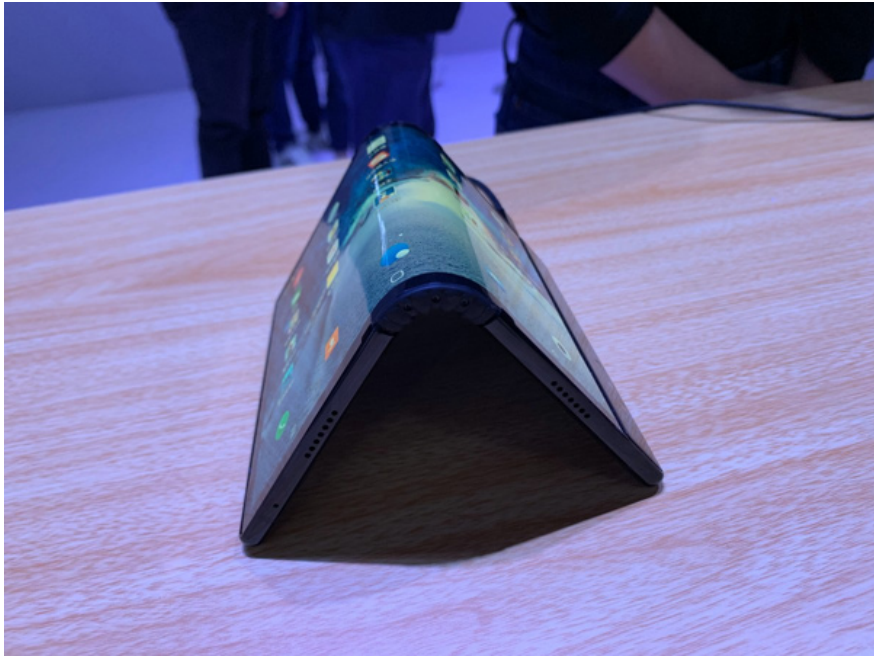

In particular, Rouyu Technology also equips this folding screen smartphone with exclusive Ro-Charge fast charging technology that provides the ability to increase from 0% battery to 80% battery in just one hour.

Previously, some manufacturers also launched folding screen devices but they are just demo versions and FlexPai is the first commercial device in the world capable of folding the screen.

The first folding screen smartphone in the world equipped with Snapdragon 8150 chip will be sold at prices from 8999yuan (about 30 million) until 12999yuan (43.5 million).
