

# Forgot iPhone password, what to do?

It is often difficult to forget the 4-digit iPhone password (passcode) but does not mean it does not happen. If you forget or enter the wrong 6-time passcode on your iPhone or iPad, your device will show notifications of disabled (disabled). What should you do in this case?

Your iPhone is accidentally locked due to entering the wrong password 6 times, greatly impacting your life. Don't worry because we can easily restore the phone to its previous state in the ways that Network Administrator instructs the following.

## 1. In case you have synced iPhone / iPad / iPod Touch:

### Step 1:

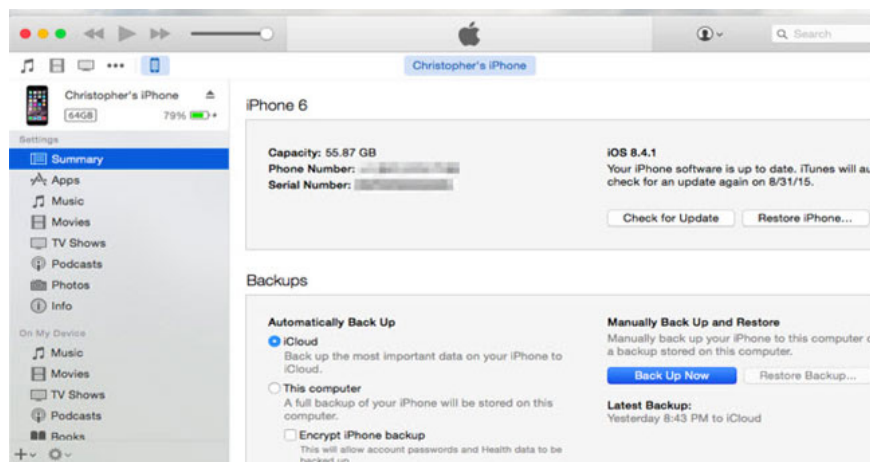

Connect your iOS device to your regular computer and open iTunes.

### Step 2:

If the device is disabled, or iTunes does not automatically sync, click **Sync** .

### Step 3:

After completing the synchronization process, select **Restore** to restore the iOS device.

Forgot your iPhone password, how do you handle it?

## Step 4:

Continue to select **Restore backup** - Restore from backup.

## Step 5:

Select the device in iTunes and select the most recent installation.

If you haven't synced your iOS device with iTunes, or can't access the computer still using synchronization, we will have to delete the data on the device before reinstalling.

## 2. In case of installing Find My iPhone application:

Find My iPhone is an application that helps search when the iPhone, iPad, iPod Touch or Mac is lost, and will protect data via another iOS device. (see more article on how to use Find My iPhone)

### Step 1:

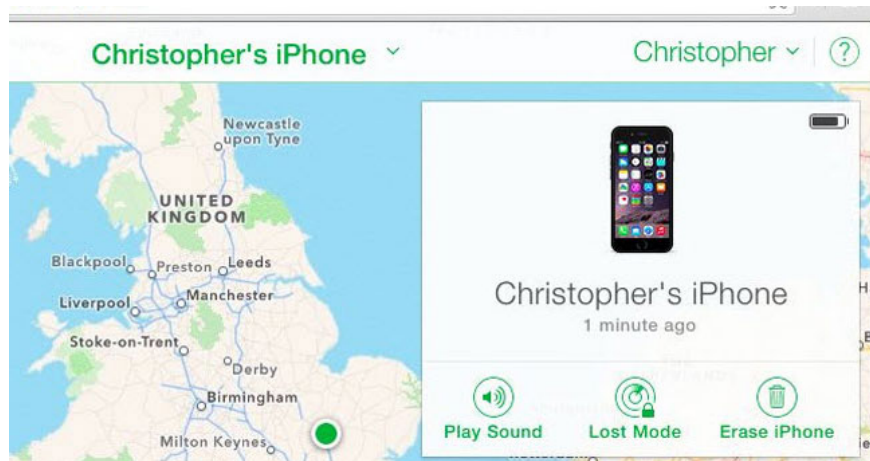

Log in to your iCloud account on iCloud.com website

Use iCloud in case of forgetting pass on iPhone

### Step 2:

Click the iPhone / iPad device to delete the data at the **All Devices** section. Continue pressing Erase to delete the remote data. If you have backed up data to iCloud, you can restore the backed up data and set a new password after the data has been deleted.

### 3. In case of not using iCloud, follow these steps:

#### Step 1:

Connect your iOS device to a USB cable.

#### Step 2:

Turn off the device, press and hold the power button until a red slider appears on the screen to turn off the device

#### Step 3:

Press and hold the **Home** button and then connect the USB cable to the device. Your iPhone / iPad will be turned on.

#### Step 4:

Hold the Home button until you see the screen connected to iTunes - Connect to iTunes.

#### Step 5:

iTunes will notify you that the device is in need of recovery. Click **OK** to restore the device.

Depending on the case of the iOS device, you choose the appropriate usage. Now, we can easily recover data quickly.
