

Format text in HTML

Format elements in HTML help determine the style and importance of text.

Format elements in HTML help determine the style and importance of text.

Format elements in HTML

In the previous lesson, you learned about style attributes in HTML. HTML also uses special elements to define text with special meaning, such as `` for bold and `<i>` for italic printing. This is a list of formatting elements for special text.

1. bold
2. important text
3. italicized
4. emphasize
5. mark text
6. minuscule
7. deleted text
8. inserted text
9. text index below
10. text index on

Elements and

The `` element in HTML is used to define **bold** text, but there is no other importance.

`n text is bold.`

Element used to define important text.

`n text.`

Elements *and*

Element used to define *italic* text, no other importance.

`<i>n in italics.`

Element used to define text is *emphasized* .

`n` *Text emphasized m?nh.*

Note: Although the browser is displayed like `and` and `<i>like</i>` But these 2 pairs have different meanings. When `` and `<i>` Text definition is bold and italicized, and `` indicates that the text is important.

Element
