

## Four Windows 7 laptops are lightweight

Here are four ultra-light laptops for business users using Windows 7 that are highly rated today.

**Here are four ultra-light laptops for business users using Windows 7 that are highly rated today.**

### Samsung X360

X360 is a laptop designed with a modern Slimline design under the combination of metal and glossy plastic to highlight the design.

- *Advantages* : The device has a long battery life of over 4 hours, weighing only 1.3 kg. Equipped with Intel SU9300 processor, 3GB of RAM and an SSD drive with 128GB storage capacity. It also has the ability to support watching HD movies quite perfectly.

- *Disadvantages* : The device has a large screen (13.3 inches) to support the maximum resolution of only 1280x800. Because only equipped with integrated graphics card, X360 gives good gaming quality when it only gets quality at 7fps and 3DMark06 scores only reached 601 points. The price is quite expensive.

- Reference price: VND 41.3 million

### HP Pavilion DV3-2115ea

DV3-2115ea is a laptop aimed at users who need a system that responds well to tasks set out from gaming to playing high definition videos.

- Advantages : Equipped with a touchpad keyboard with smooth processing speed. LED backlit main screen for excellent image quality and color. Nvidia G 105M graphics chip makes it possible to handle game and video tasks more smoothly.

- Disadvantages : The device is quite thick due to the built-in optical drive and only equipped with a 13.3-inch display screen. The weight is still heavy when up to 2.2kg. The processor comes with only Pentium Dual-Core T4300 much slower than Intel Core 2 Duo versions. The amount of electricity consumed when using is quite high when reaching 35watt compared to 10watt of other models. Sound for quality is only acceptable.

- Reference price: VND 19 million

### **MSI X600-055UH**

MSI X600 is considered a star in the new ultra-thin laptop technology village while its functions are easily managed.

- Advantages : Equipped with a super wide screen with 15.6 inch size, this also means the system will be equipped with a full keyboard. It also provides users with a Core 2 Duo SU9600 processor with a power consumption of only 10 watts. In addition, the processor of the device is up to 4GB and integrates an integrated ATI Radeon 4300 graphics card. Its gaming capabilities give 27fps quality and 3Dmark06 score of the machine reaches 2512.

- Cons : The weight is quite heavy when it is up to 2.1kg. It has less than 2.5 hours of battery life, but you can increase the time to more than 4 hours when you switch the device to power saving mode.

- Reference price: VND 19 million

### **Sony VAIO NS20EF / S**

This is considered the largest and heaviest laptop among the laptop models mentioned with a very beautiful design.

- *Advantages* : Equip users with 3GB of RAM, optical drive as well as provide connections such as HDMI, Bluetooth and standard Wifi connection n.

- *Cons* : Only equipped with Intel Pentium T4300 processor. Although equipped with 3GB of RAM, the 64-bit Windows 7 system is considered unsuitable since the best RAM for 64-bit systems is recommended to be 4GB. Only equipped with Intel 4500M integrated graphics chip for gaming capability of only 6fps and 3DMark06 scores only 725 points. The screen only supports a maximum resolution of 1280 X 800. The 3600mAh battery but only for uptime is less than 2 hours.

- Reference price: VND 15 million
