

FPT launched a new generation Wi-Fi modem with superior technology for Internet users

What benefits will users enjoy from this new Wifi Modem device from FPT?

1. How to use the old router to increase the coverage for Wi-Fi
2. Tips to increase Wifi signal to the highest level
3. Weak WiFi waves, try doing this before you intend to replace the new Wi-Fi router set

Recently, FPT has launched a new generation of Wi-Fi Modem device AC Wave 2 MU-MIMO with dual band support, the launch of this new device is considered a revolution, bringing about great efficiency, Especially suitable if customers are using high speed fiber optic Internet. This effort is considered a good signal for Internet users of FPT Telecom in particular and Vietnam in general when customers will experience faster and more stable Internet connection than before.

From November 1, 2017, subscribers who are using fiber optic Internet service of network operators in Hanoi and Ho Chi Minh City will have the opportunity to own more Wi-fi modem equipment standard AC Wave 2 MU-MIMO. Latest with preferential price.

Cost and advantages when using a new Wifi device

According to FPT Telecom representative, the outstanding advantage of this generation of Wi-Fi modem AC Wave 2 MU-MIMO will give users more stable transmission quality, the ability to transfer large information files Big data with the highest speed is when the trend of watching high-quality movies or video calling is

growing; The new device also supports more users, more devices and more applications to connect at a time.

Besides, this new device also supports both connecting with old frequency (2.4 Ghz) to access Wi-fi and a new band (5 Ghz), thereby limiting problems such as network congestion. , the signal is flickering, slow due to too many devices accessing, due to obstructions, distance or interference . Smartphone or smart devices such as laptops, new tablets all support Wi standard -fi can automatically connect to the modem's 5 Ghz band. This method helps the transmission line to be offloaded to run faster, smoother, to avoid maximum interference.

By studying, providing customers with integrated Wi-Fi modems of both 2.4GHz and 5GHz bands to ensure stronger transmission and wider coverage. Since then, it will catch up and meet the new experience trends of customers on high-speed Internet connection, connecting wireless devices such as laptops, phones and tablets to access and use the Technology applications such as teleconference, video call, cloud computing or watching high quality full HD movies, 4K . will all be upgraded with this new technology standard device.

Next in terms of form and price, this new Wi-Fi AC Wave 2 MU-MIMO standard modem will be equipped with a compact '2 in 1' with antenna hidden inside the device, ensuring aesthetics for users.

With this new generation Modem device, FPT Telecom will provide existing customers with the use of fiber optic Internet service packages in Hanoi and Ho Chi Minh City with preferential price of 990,000VND compared to the selling price. List of equipment is: 1,490,000VN? (VAT included). This is considered a "pretty" price compared to many bearded Wi-Fi support devices on the market today.

All connections become unlimited

According to experts, the transmission speed of the Wi-Fi modem AC Wave 2 MU-MIMO standard can be up to 867Mbps in the 5GHz band with 80Mhz channel width, about 3 times higher than the Wi-Fi standard. old with 2x2 Antenna number; The theoretical speed can even reach a maximum of 6.77Gbps in the 5GHz band using the 8x8 Antenna, which is 11.5 times higher than the old 802.11n standard. This promises to be a device that contributes to support the conversion of business applications, life to cloud computing platform and IoT.

Some notes when deciding on dual-band Wi-Fi modem

In principle, every customer, whether using any network, can buy a dual-band Wi-Fi transmitter separately for use in parallel with the current modem, note that the box or device must always be written. AC Dual Band or Dual Band. However, many experts recommend that customers should prioritize network operators with pre-installed Modem Wi-Fi routers with Dual Band support such as Wi-Fi Modem 2 MU-MIMO dual-band Modem dual-device device. If FPT Telecom does not, customers will often have to equip themselves with multiple bearded discrete routers that support Dual Band and then connect to the existing Modem via LAN port via Ethernet cable, which is quite expensive and many devices.

Besides, dual-band Wi-Fi modem will really take advantage when it comes with high-speed internet package.

Contact information for new generation Wi-Fi Modem under AC Wave 2 MU-MIMO and FPT Telecom's Internet service contacted 19006600.
