

Free access to WiFi across the country

Currently there are many locations across the country that have free WiFi coverage. Users can fully access these locations, login to WiFi via the provided password.

WiFi is now an integral part of technology life, supporting work, entertainment, surfing Facebook, watching movies, etc. even controlling smart devices via WiFi.

However, in case you run out of 3G space and need to send an email to your partner, or reply to Messenger messages, you can search for free WiFi that has covered nationwide. These locations are mostly public, free password sharing for users so we can easily access. If you need to use WiFi, you can search for free access points in the following way.

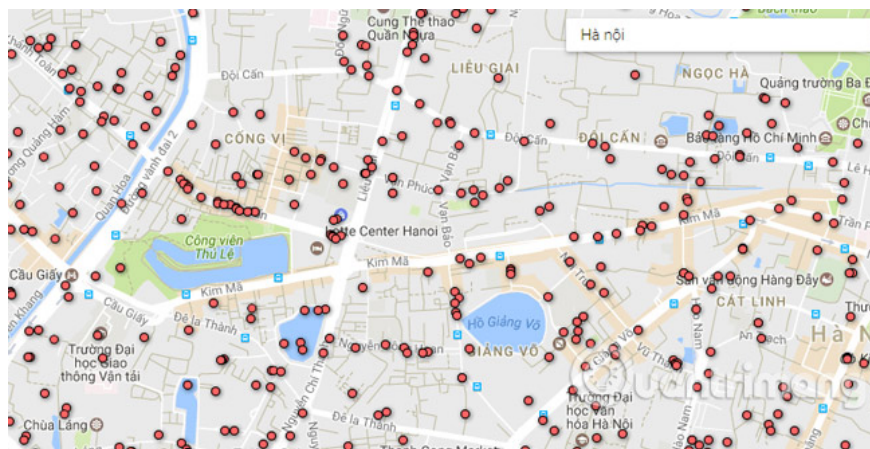

Step 1:

First of all, users access to the address below, apply on phones and computers. To identify free WiFi locations, users will need to enable GPS activation or allow current location access when requested.

1. <https://opennetmap.co/>

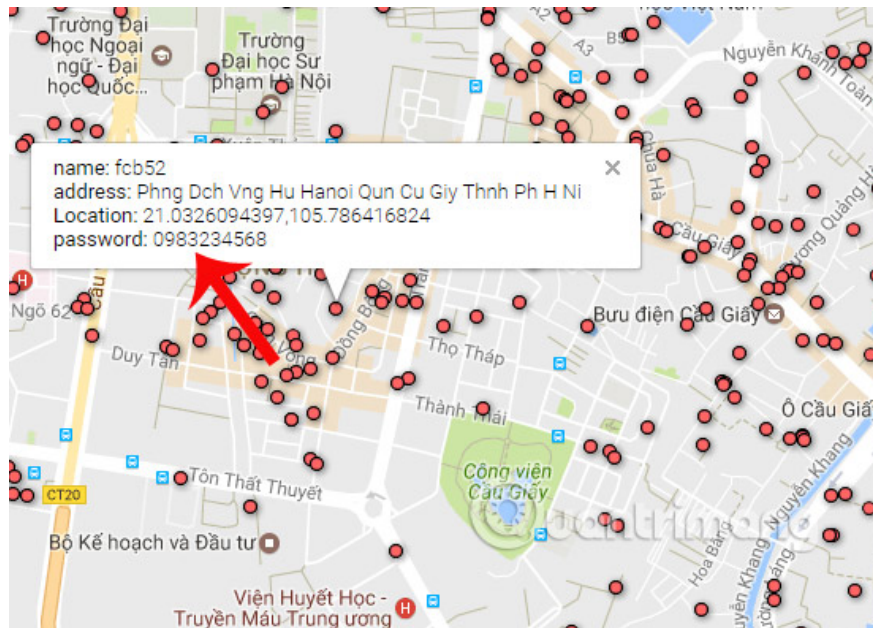

Step 2:

After visiting the page, you will see red dots representing the WiFi access points that Opennetmap lists to users.

Step 3:

Now you click on any location. If there is a Password section displayed, it means we can access that WiFi location for free.

By providing WiFi at many different locations across the country, users can access free places with passwords provided and share to many people. These WiFi are public, allowing WiFi password sharing for free.
