

Free unused memory on Firefox browser

Whenever you use Firefox browser to play online games or browse the web ... will consume a lot of memory, causing your computer to lag. One of the simplest ways to prevent Firefox browser from consuming memory is to turn off tabs that you don't use, restricting access to large graphics sites.

Whenever you use Firefox browser to play online games or browse the web . will consume a lot of memory, causing your computer to lag. One of the simplest ways to prevent Firefox from "consuming" memory is to turn off the tabs you don't use, restricting access to large graphics sites.

In addition, Firefox also adds a feature that allows you to free up unused tabs by configuring the about: memory tab.

How to free up Firefox browser capacity?

To free up Firefox memory capacity with just one click, you just need to download and install the add-on Free Memory Button on Firefox browser.

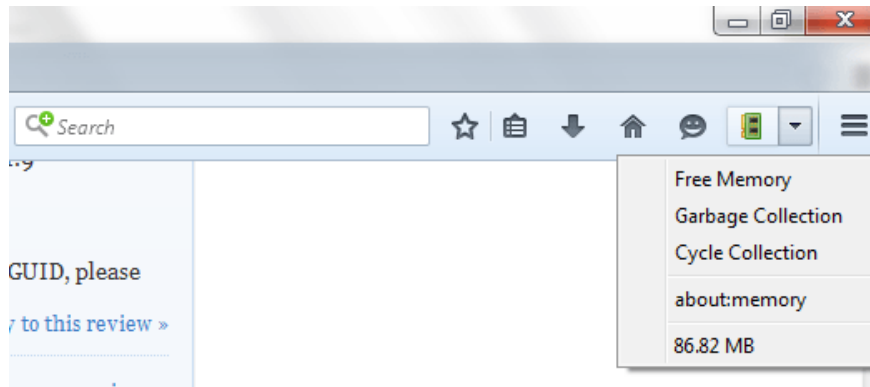

Download and install the add-on Free Memory Button on Firefox browser [here](#).

After the add-on Free Memory Button has been installed, you need to proceed to check if the add-on is enabled by going through the add-on manager on the browser.

Go to **Menu => Add-ons => Extensions** and check if the Free Memory Button add-on is enabled. If not, then proceed to activate.

When enabled, the add-on automatically frees up the memory capacity of your Firefox browser. Basically this function is similar to about: memory.

Whenever you want to free memory on the Firefox browser, simply click the Free Memory button on the toolbar and you're done.
