

Free up space on Windows 10 by deleting temporary files

Each time you create a file or application, there are usually temporary files (temporary files), but they only work at the current time. Thus, when not in use, these temporary files will take up your computer space. So how to automatically delete them? Let's find out more details in the article!

Every time you create a file or application, there are usually temporary (temporary) files attached. Windows uses these folders to store files that are only used for a short period of time, such as error logs, images, or cached files. The presence of temporary files helps your computer run more smoothly at that time but you rarely need them after restarting or closing a program.

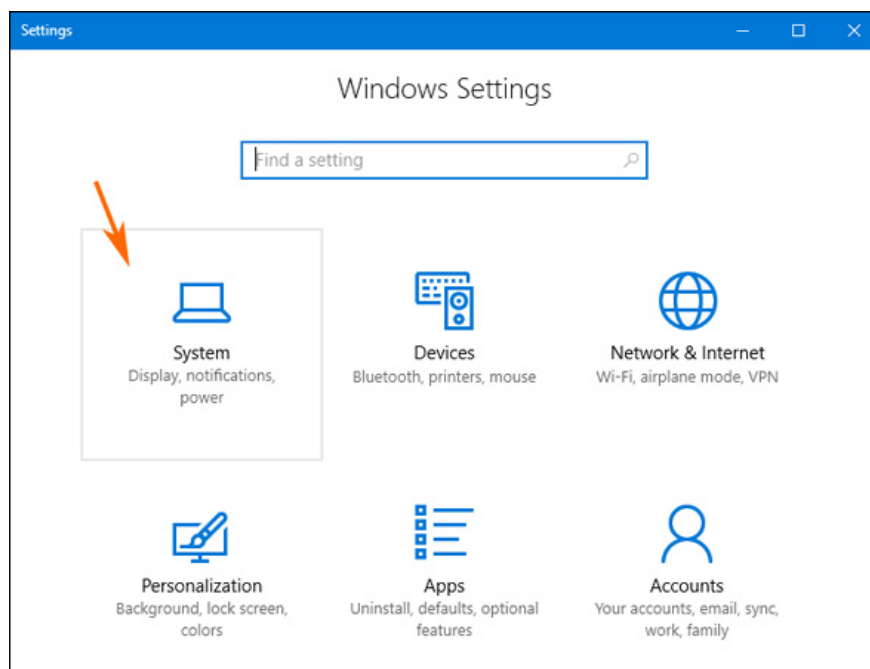

Thus, when not in use, these temporary files will take up your computer space. So how to automatically delete them? With Windows 7, you can use the Disk Cleanup tool, however, in Windows 10, Microsoft has integrated a smart feature that helps you do that.

1. Automatic computer shutdown timer for Windows 10, Windows 8, Windows 7, Windows XP
2. How to install Windows 10 from ISO, USB, hard drive, DVD

To set up automatic deletion of temporary files in Windows 10, follow the steps below:

Go to **Action Center** and click on the **All Settings** app or you can access the **Start Menu** and select **Settings**.

Then, click **System**> **Storage** .

Find the **Storage sense** option and activate the slider below the content " *Windows can automatically free up space by getting rid of files you don't need, .* ".

You can click **Change how we free up space** below the slider to see more options to **free up** more computer space. Here, you can adjust the deletion commands automatically or manually if you want.

">

It is done! Automatically deleting temporary files as well as files in Recycle Bin is extremely simple in Windows 10. Although these files will not take up a lot of your computer space, you should still delete them when not used to make your device run faster.

Good luck!
