Japanese electronics firms are always faithful to black, white or silver, although rivals such as Dell and Sony . have released many brilliant laptops. However, Fujitsu yesterday introduced the LifeBook A1110 with an eye-catching and unique shell.

Users can change the laptop color, for example, if they feel bored of the blue cover, they only need to spend 20 USD to buy "pink shirt" with lovely butterflies. A1110 allows regular removal of the cover without affecting the LCD screen.

The LifeBook A1110 also has a filter in front of the air vents, preventing dust from getting inside the machine. This filter can be disassembled for regular cleaning.

A1110 is equipped with Intel Core 2 Duo P7350 or T5800 processor, RAM up to 4G and runs on 32-bit or 64-bit Windows Vista. The device uses a 250 GB or 320 GB hard drive, weighs 2.8 kg, has a DVD burner and 6-pin kit.

The product has a starting price of 799 USD and Fujitsu will release more new shell colors depending on customer reception.
