

Future high-end Nokia phones may have 5 cameras

Some phones now have four cameras, with two on the back and two on the front, but an upcoming Nokia phone can outperform with 5 camera lenses.

Some phones now have four cameras, with two on the back and two on the front, but an upcoming Nokia phone can outperform with 5 cameras.

According to a technology user posted on the Chinese Baidu website, he stressed that future Nokia phones will have seven camera holes, 5 for lenses and two of them are for LED flash.

It is unclear how the cameras will be divided and how they will be used, but we guess there will be three on the back and two on the front.

In fact, there are rumors that the upcoming Nokia 9 will have 2 cameras on the front and 2 cameras on the back, it may have an additional camera. It is also possible that this rumor is about another phone, but in general, no matter which phone it is, it will be a high-end smartphone with multiple cameras.

Also according to this leaked source, the upcoming high-end Nokia phone will have a Snapdragon 845 chipset, a high-end chip, which is being used in many of today's most powerful phones.

Therefore, using such a chipset in Nokia 9 or another Nokia phone will not be surprising, and phones with five cameras are not a problem, especially with Nokia, the phone line used to be. Very famous for cameras in the past.

At the end of February 2018, the next Nokia phone will be announced at MWC 2018, we are waiting to see if the leaked information is correct.
