

# Galaxy A11: 3 main cameras, 4000mAh battery with fast charging

Recently, Samsung manufacturer has quietly launched its latest smartphone of the A-series series called Galaxy A11.

Recently, Samsung manufacturer has quietly launched its latest smartphone of the A-series series called Galaxy A11. This is a product of the low-cost segment of the Galaxy A10 model that was launched last year, targeting the basic users.

The Galaxy A11 is equipped with a 6.4-inch HD + LCD screen, with a 'punchy' design, which is where the 8MP f / 2.0 selfie camera is located. A bit thick, the back of the device is finished from plastic.

Samsung A11 phone has a triple camera cluster on the back, including a main sensor with 13MP f / 1.8 wide-angle resolution, 5MP f / 2.2 sensor with super wide-angle lens and finally a 2MP f / 2.4 camera. depth. The device is equipped with a fingerprint sensor on the back.

The power of the Galaxy A11 comes from an octa-core 1.8GHz processor, the type of chip that has not been disclosed (could be Exynos or MediaTek). The device is equipped with 2GB / 3GB RAM option and 32GB internal memory (with support for expandable microSD memory card) with a battery of 4000mAh capacity and supports fast charging technology with a capacity of 15W.

Currently, Samsung has not disclosed the price and availability of the Galaxy A11.
