

Galaxy AI appears on previous generations, is S24 series still worth buying?

Many generations of Samsung smartphones will be equipped with Galaxy AI from March 28, however, the S24 Series is still a bright choice if users want the most comprehensive experience with circle search features, note assistant, and assistant. chat management...

The One UI 6.1 update brings Galaxy AI to many generations such as Galaxy S23 series, Galaxy S23 FE, Galaxy Z5 Series, Galaxy Tab S9 (excluding Tab S9 FE). Galaxy AI is a new artificial intelligence experience on mobile devices, first introduced by Samsung on the S24 series launched earlier this year. This move of the company promises to make technology enthusiasts 'stand still' when in the future many people can access and take advantage of the power of Galaxy AI to optimize work, entertainment and make a difference in life. life.

This is in line with the commitment that Mr. TM Roh - President and Director of Mobile Experience (MX), Samsung Electronics, once stated: bringing Galaxy AI to about 100 million Galaxy mobile devices worldwide this year. . Samsung's goal is to make AI more accessible, popularizing its utility to the community.

The company also emphasized that these are the first steps in implementing the "AI for All" vision that Samsung previously introduced at CES 2024. Accordingly, Samsung will empower many technology users to access and master AI technologies on a variety of devices from phones to electronic devices.

At the launch of the first Galaxy S24 series in Vietnam, Galaxy AI features demonstrated their usefulness to users when they can be applied effectively in many aspects of life such as easily chatting with customers.

international partners at work.

Smart Chat Assistant helps users translate messages into 13 languages. Communication support tools such as Live Interpreter with the ability to translate calls in real time; The interpreter assistant helps translate live conversations with a split-screen interface.

There are also features like the Circle to search tool and the powerful Note assistant, creating a seamless user experience in everyday tasks. The Creative Post-Production feature supports intelligent post-production, rearranging objects in photos, creating creative moments, allowing subjects to be cut, recreating backgrounds. very useful for people doing related work. content creation.

The information Samsung announced in its upcoming One UI update and the fact that Galaxy AI will be available on the Galaxy S23 series, S23 FE, Z Fold5, Z Flip5 and Tab S9 product models makes many users ask: If previous generations already owned Galaxy AI, is the Galaxy S24 Series still worth upgrading?

According to technology news site CNET, the answer is very worthwhile, because on Samsung's latest flagship line, hardware plays a decisive role in software power. Hardware upgrades not only bring a device with good performance but also optimize the AI ??experience on the device itself, thereby helping the S24 Series be the device with the most comprehensive Galaxy AI. . That means, although the Galaxy AI is updated, the feature set on the previous generation will not be completely complete like on the Galaxy S24 Series.

For example, the new generation Galaxy is equipped with Qualcomm Snapdragon 8 Gen3 processor, default RAM is 12GB. According to the company's announcement, the machine has 30% stronger performance and 25% better energy savings. Those are necessary upgrades to ensure smooth running of AI features.

The experience of taking photos and recording videos is also much better even though this is not the first smartphone equipped with an AI-integrated camera. The difference is shown when using the camera to take photos at night, in backlight or in complex lighting conditions. Galaxy AI helps the machine process images better, especially in light and dark areas, ensuring contrast and natural background blur when taking portraits.

Tom's Guide reviews: 'We think the Galaxy S24 Ultra is one of the best Android phones you can buy right now. We love the brighter screen and long battery life, the images produced by the camera are also very sharp'.

Galaxy S24 Series promises to be the top choice for technology enthusiasts thanks to the combination of hardware and software power to optimize the Galaxy AI experience. In addition, the device has a square design with a flat screen and integrated S Pen in the body. If you cannot upgrade, users can experience part of the Galaxy AI features on some previous generations to understand how AI increases convenience in daily life. But if you want to choose a device worth buying at this time, the Galaxy S24 Series will be the right answer for those who love creativity and smart gadgets.
