

Genshin Impact 2.4: Top 4 reasons to accumulate Yuanstone waiting for Xiao

Genshin Impact 2.4 is bringing back Xiao - one of the most damaging characters in the game at the moment.

Genshin Impact 2.4 has officially been released and will bring back "Guardian Yaksha" Xiao - one of the characters with the strongest damage ability in the game at the moment. And with Shenhe only going to play a supporting role in the lineup, many gamers are planning to seize the opportunity to own Xiao in this new update.

Xiao is extremely strong in the Palace of Destiny 0

Unlike many other 5-star characters in Genshin Impact, Xiao unleashed his true potential in C0. This guy's Zodiacs from C1- C5 don't bring about any significant changes in damage output and something that "vegetarian" players love.

Only Xiao's 6th Bow can really change the playstyle of this character because it helps Xiao reduce the cooldown of his Elemental Skills while casting his Rage Skill.

Xiao doesn't need a support character

Xiao is the type of character that can carry the whole team with one hand. The reason is because the damage that this guy deals does not depend on the Elemental system and usually, Xiao only requires a shield character or a healer character to protect himself in battle.

AoE DPS

Damage range is a hugely important factor in Genshin Impact battles, especially in Roaring Abyss. And Xiao is definitely one of the best AoE DPS characters in Genshin Impact.

While the Elemental Skill deals damage to enemies with a Speed ??Wind dash, Xiao's top-down attacks have a massive damage radius, while providing dimensional mobility. vertical.

Xiao is very easy to build

Gamers will be surprised to know that you don't need to craft artifacts to build Xiao. It is their secondary stats that are most important. However, a two-piece Viridescent Venerer and a two-piece Shimenawa's Reminiscence set would also be suitable for this character.

Even if the player does not receive these artifacts, they can still collect random artifacts that increase % ATK, Wind Damage, and Critical Rate/Critic Damage.
