Two versions of the MacBook Pro 15-inch Retina screen began to appear genuine through a few distributors. Lower configuration model with Core i7 2.3 GHz chip costs 50.9 million VND, while the 2.6 GHz version and double hard drive capacity cost 65.4 million VND.

Compared to the Apple published on the website, the selling price in Vietnam is higher from 300,000 to 500,000 VND. Retailers said that the price of the product is close to the published "Apple" level, import and tax costs make the product fluctuate depending on the retailer.

MacBook Pro Retina was announced by Apple in early June and sold immediately after that. The new product has an ultra-slim design, the screen has a resolution of up to 2,880 x 1,800 pixels (more than 5 million pixels). This model is about to travel to Vietnam at a price of VND 47 million or more.

Some portable stores in HCM City said that the new MacBook Pro Retina is attractive, but the sale does not run. High price is the reason why this product can only reach a number of users with money and technology. 13-inch MacBook Pro versions, MacBook Air models costing more than 20 million are more popular with Mac players.
