

Get all notifications from your Android phone on the Desktop screen

Usually when there is a notification on your Android phone, you have to manipulate the phone and see the notification. While working, having to open up the phone and see such a message both take your time and distract you, especially if you are an office worker, the more you use your phone during the hour work.

Usually when there is a notification on your Android phone, you have to manipulate the phone and see the notification. While working, having to open up the phone and see such a message both take your time and distract you, especially if you are an office worker, the more you use your phone during the hour work.

Why don't you think about how to "get" all notifications from your Android phone on the Desktop screen during work, is it "a double job"?

In the article below, Network Administrator will guide you how to install to receive all notifications from Android phone on Desktop screen.

Receive Android phone notifications on Desktop screen:

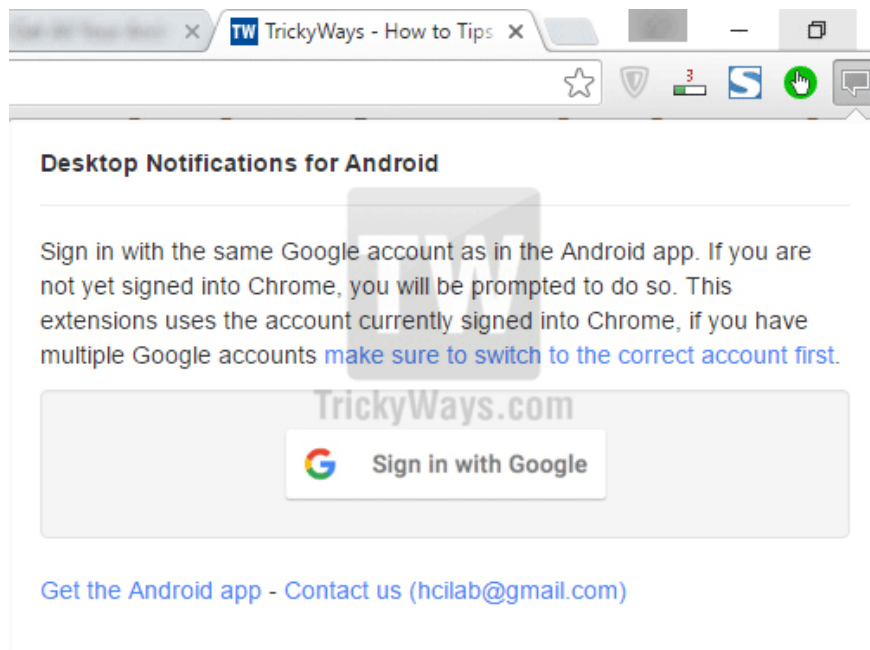

To receive Android phone notifications on the Desktop, you must download and install the Desktop Notification application to your Android phone.

Also install Desktop Notification extension on Chrome browser or Firefox browser on Windows computer.

Steps to take:

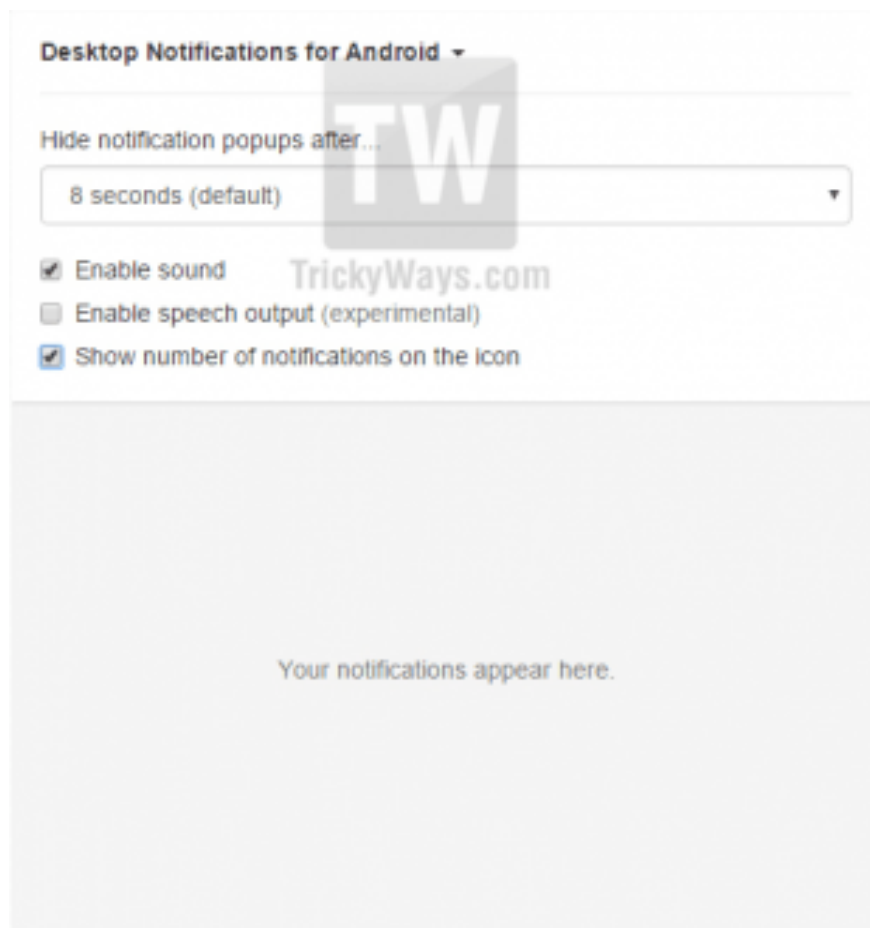

First download and install the Desktop Notification extension for Chrome browser or Firefox browser on your computer.

After installing the extension successfully on your browser, at this time on the screen you will see a login message. Your task is to log in to your Google account there.

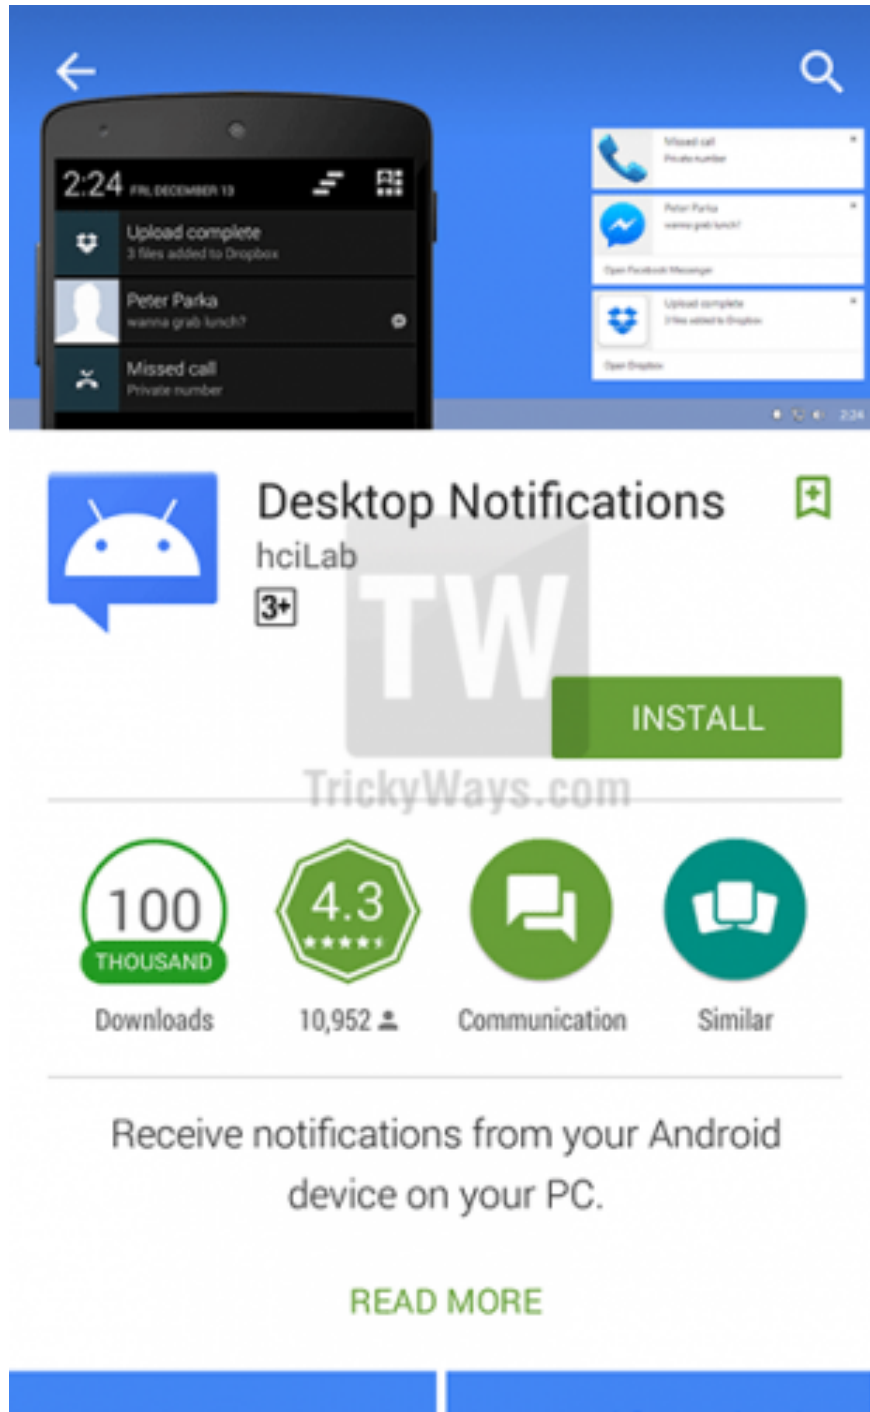

Note: This account is also used to log in Desktop Notification application for Android in the section below.

After logging in, set up some notification settings such as notification bell, popup notification window . on the Desktop screen.

The next step is to download and install the Desktop Notification application on your Android phone. Visit Google Playstore to find Desktop Notification application, proceed to download and install the application on Android phones.

Download the Desktop Notification app for Android phones here.

Then proceed to activate notifications on the Desktop from Desktop Notification application by opening the Desktop Notification application you just downloaded and installed then click **Open Settings** . On the warning popup window that appears, select **OK** .

Desktop Notifications

SETUP
