

GFX Bench 5.0 is the most advanced and accurate smartphone performance grading application

In the GFX Bench 5.0 version, there will be an additional Aztec Ruins scene processing test that runs on many low-level APIs for testing to help users compare the performance of more advanced devices.

Recently, GFX Bench - the famous application for graphics and gaming benchmark on both Android and iOS, has been updated to the new version 5.0 with a test and evaluation of the performance of the graphics card on smartphones in a way most intensive and accurate.

In the GFX Bench 5.0 version, there will be an additional Aztec Ruins scene processing test that runs on many low-level APIs to help users compare the performance of more advanced devices.

Devices are tested through processing scenes running at 1440p (high) or 1080p (normal) resolution, it can run compatibility in Vulkan, OpenGL and Metal.

In the future, these new tests will be used by reviewers around the world to test the performance of many different devices. Let's wait to get a better overview of the performance of the latest smartphones.

1. Download GFX Benchmark for Android
2. Download GFX Benchmark for iOS
