

Gigabyte Aorus 17 review: High-end laptop for gamers and creators

Aorus 17 is Gigabyte's latest addition to its line of gaming laptops. Its impressive design, performance and size make this laptop an attractive device not just for gamers.

Aorus 17 is Gigabyte's latest addition to its line of gaming laptops. Its impressive design, performance and size make this laptop an attractive device not just for gamers. This laptop can even handle the most demanding software required by video designers, editors and artists.

Appearance of Aorus 17

The Aorus 17 is powered by an Intel Core i9-9980HK processor, along with an Nvidia GeForce RTX 20 Series GPU. This combination makes running any game or software super smooth. Nvidia GeForce RTX delivers the clearest image possible. You can also adjust the graphics section using Aorus's Graphics Switch, which allows you to choose the best graphics setting for your situation.

The components inside the Aorus 17 are not the only interesting features of this laptop. At first glance, you'll notice the thin bezels surrounding the screen. The 3mm edge of this laptop is the thinnest in the world. The design of the Aorus 17 laptop is modeled after fancy cars and fighters.

The unique mechanical keyboard is another outstanding aspect of this laptop. Gigabyte uses mechanical switches from Omron. In addition, the light is evenly spread across each key, creating a beautiful and colorful look. Like most RGB keyboards, you can adjust the light from the Aorus panel.

Unique mechanical keyboard

Cooling is not an issue with this laptop either. Windforce Infinity Cooling System includes 2 12V fans, 5 heat pipes, as well as 12 vents to ensure you will not encounter overheating.

If you're a designer, artist or video editor, you'll want a laptop that's both playable and workable. Aorus 17 is the perfect all-in-one tool for games and software. In addition, designers will be happy to know that the monitor is tuned using X-Rite Pantone calibration.

Although the Aorus 17 is priced higher than \$ 3,000 (69,000,000 VND), this is a luxurious laptop for both gamers and creators. A cheaper version is also available, but the specs will change accordingly.
